
Rotary Actuator

Series CRA1

Rack Pinion Style/Size: 30, 50, 63, 80, 100

Models with cushion or with solenoid valve available.
(Only sizes ≥50 are available.)

Angle adjustement is possible.
Size 30····· Fine angle adjuster is standard equipment.
Size 50 or larger····· Angle adjustable style

Auto switch is mountable.
Adjustment of switch location is easy with rail mounting.

Copper Free Rotary Actuator

No influence on cathode ray tubes by copper ion and fluorine resin. As standard models are already made applicable to copper free styles, they can be applied as they are.

Specifications

Style	Pneumatic
Applicable size	**30, 50, 63, 80, 100**
Max. operating pressure	1MPa
Min. operating pressure	0.1MPa

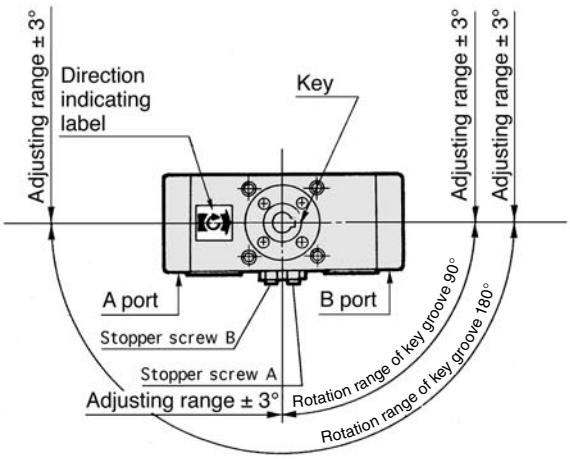
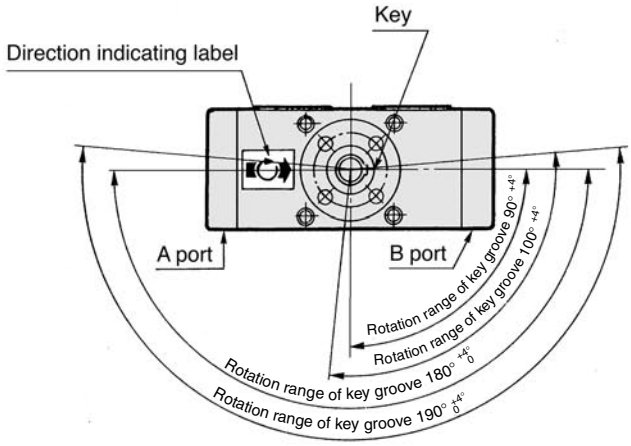
Rotation Range of Key Grooves

If air pressure is applied from the A side of the direction indication label, the shaft rotates clockwise. If air pressure is applied from the B side, the shaft rotates counterclockwise.

Size: 30



Size: 50 to 100



Stopper screw A: For end adjustment in clockwise direction
Stopper screw B: For end adjustment in counter clockwise direction.

How to Set The Rotation Time

Even if the torque that is generated by the rotary actuator is small, the parts could become damaged depending on the inertia of the load. Therefore, the rotation time should be determined by calculating the load's inertial moment and kinetic energy.

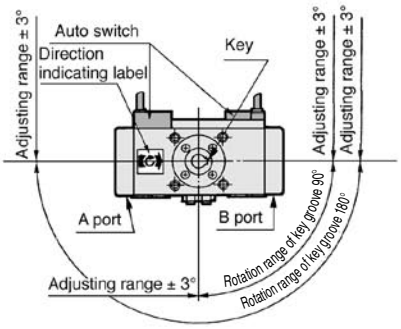
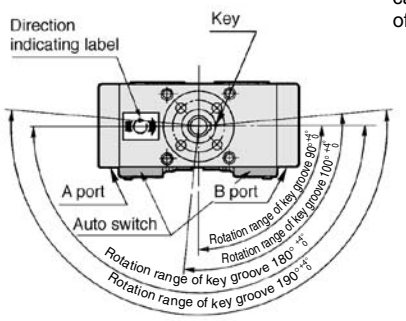
Rotation Range of Key Grooves/Switch Mounting Positions

Size: 30
CDRA1□W30

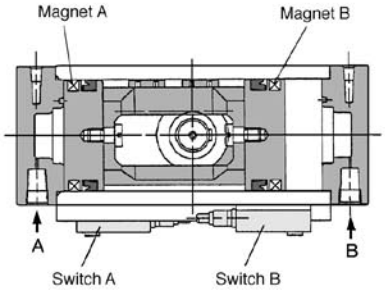


Size: 50 to 100
CDRA1□□50 to 100



Operation Principles

In the diagram below, switch B is ON. When pressure is applied from A, the piston moves to B, causing the shaft to rotate clockwise. At this time, magnet B goes out of the movement range of switch B, causing switch B to turn OFF. Furthermore, the piston moves to the right, causing magnet A to enter the movement range of switch A. As a result, switch A turns ON.



Proper Mounting Positions for Auto Switches

∗ The dimensions inside "( )" are for 180°. ∗∗ Up to 2 auto switches can be mounted per actuator. The dimensions in the table are the values that represent the most sensitive positions of the auto switches. Thus, they are not the dimensions that represent the mounting position at the time of shipment.
∗ Consult SMC concerning the angles for the auto switches other than the models D-A73 and D-A53.

Applicable size	**50, 63, 80, 100**
Applicable shaft style	Shaft S, W, Y

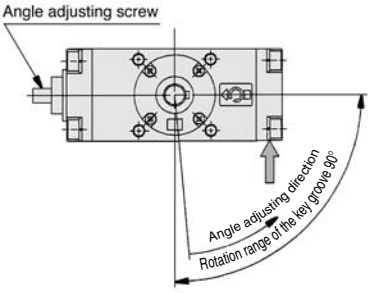
- **The rotation range and the angle adjusting direction are changed. (-XC47 to XC52)**

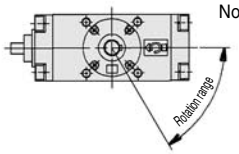
The patterns with the rotation angle of 90° and 180° are applicable to the respective patterns with the rotation angles of 100° and 190° of the Made to order specification.

Symbol: C47

For the angle adjusting style, angle adjusting screws are mounted to the left cover.



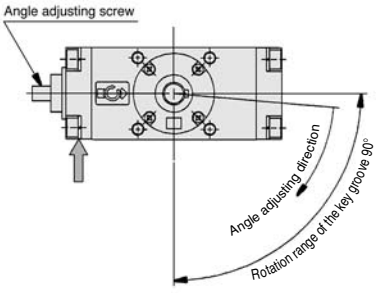
The rotation range under the adjustment of an angle at 60° is indicated below



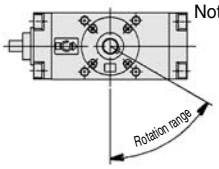
Note) If it is pressurized to the port indicated with the arrow, the shaft rotates in the clockwise direction.

Symbol: C48

For the angle adjusting style, angle adjusting screws are mounted to the left cover.



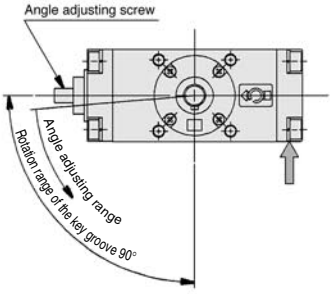
The rotating range under the adjustment of an angle at 60° is indicated below



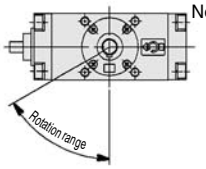
Note) If it is pressurized to the port indicated with the arrow, the shaft rotates in the clockwise direction.

Symbol: C49

For the angle adjusting style, angle adjusting screws are mounted to the left cover.



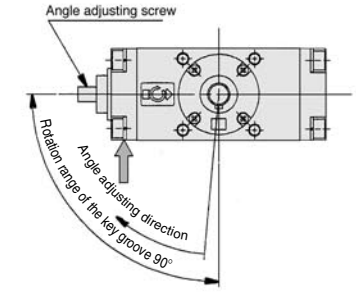
The rotating range under the adjustment of an angle at 60° is indicated below



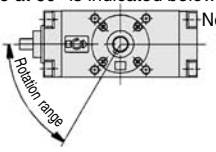
Note) If it is pressurized to the port indicated with the arrow, the shaft rotates in the clockwise direction.

Symbol: C50

For the angle adjusting style, angle adjusting screws are mounted to the left cover.



The rotation range under the adjustment of an angle at 60° is indicated below



Note) If it is pressurized to the port indicated with the arrow, the shaft rotates in the clockwise direction.

Symbol: C51

For the angle adjusting style, angle adjusting screws are mounted to the left cover.
