Refrigerant-free and energy saving type using no compressor. Ideal for ordinary temperature and high temperature processes.

- Type of circulating fluid: Fluorinated fluids/Ethylene glycol aqueous solution/Tap water, Deionized water
- Temperature range setting: 20 to 90°C
- Cooling capacity: 2 kW/8 kW/15 kW/30 kW
- Temperature stability: ±0.3°C

More effective energy-saving through use of an inverter pump

Inverter type
Power consumption
0.5 kWh/h
Facility water
1.2 L/min
Energy Saving and Refrigerant-free

Energy saving and refrigerant-free
(Ordinary temperature up to 90°C)
The water-cooled thermo-chiller which does not use a compressor (refrigerant-free) is suitable for processes operating from ordinary temperature to 90°C. The energy-savings shown below can be achieved in comparison with existing models (depending on the conditions).

- **Power consumption:** Max. 59% reduction
  (SMC comparison)
The power consumption can be reduced by direct heat exchange between the circulating fluid and facility water with no refrigerating circuit.

<table>
<thead>
<tr>
<th></th>
<th>Existing model</th>
<th>HRW008-H</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating conditions</td>
<td>60°C, 0 kW with 50% load, 8 kW with 50% load</td>
<td>4.6 kWh/h</td>
</tr>
</tbody>
</table>

- **Circulating fluid:** Max. 13% reduction
  (SMC comparison)
Enhanced temperature control technology and the unique pump/tank construction achieved the reduced circulating fluid required for operation.

<table>
<thead>
<tr>
<th></th>
<th>Existing model</th>
<th>HRW008-H</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating conditions</td>
<td>60°C, 0 kW with 50% load, 8 kW with 50% load</td>
<td>15 L</td>
</tr>
</tbody>
</table>

- Facility water: Max. 89% reduction
  (SMC comparison)
The HRW series can achieve reduction in power consumption as it does not have a compressor, and reduction in the amount of facility water used because heat is exchanged directly with the circulating fluid.

<table>
<thead>
<tr>
<th></th>
<th>Existing model</th>
<th>HRW008-H</th>

<tr>
<td>Operating conditions</td>
<td>60°C, 0 kW with 50% load, 8 kW with 50% load, Bypass valve fully closed</td>
<td>11.2 L/min</td>
</tr>
</tbody>
</table>

- **Installation area:** Max. 45% reduction
  (SMC comparison)
(Forced exhaust from rear side)
By emitting the heat from the back, ventilation slits on the side are unnecessary offering reduced installation space.

- Reduced initial cost
- Contribution to the environmental preservation
- Reduced running cost
- Reduced facilities investment
- Space saved facility water equipment
- Contribution to the environmental preservation
- Reduced initial cost
### High Performance

- **Temperature stability:** ±0.3°C
  
  (When a load is stable)

  Enhanced temperature control technology achieved ±0.3°C temperature stabilities when a load is stable.

### Easy Maintenance

- **Circulating fluid automatic recovery function** (Refer to “Options” on page 278.)
  Circulating fluid inside a thermo-chiller tank can be recovered automatically. (Recovery volume: 12 L)
  - Reduced maintenance time
  - Faster operation
  - Reduced circulating liquid loss by evaporation or spill

- **Temperature stability:** ±0.3°C
  
  (When a load is stable)

- **Cooling capacity:** Max. 30 kW
  
  Up to 30 kW cooling capacity achieved.

### Technical Data

- **HRW015-H1**
  - Circulating fluid temperature: 81.0°C
  - Facility water temperature: 80.0°C

- **HRW030-H2**
  - Circulating fluid temperature: 35.0°C
  - Facility water temperature: 30.0°C

### Easy maintenance

- Checking the electrical component parts accessible from the front side only
- Possible to replace the maintenance parts (such as a pump) without removing the pipings and discharging the circulating fluid.
- Various alarm displays
  (Refer to page 276.)

### Circulating fluid electric resistivity control function

(Refer to “Options” on page 277.)

(DI control kit)
Electric Resistivity Control

**DI control kit**
(Refer to “Options” on page 277.)

Electric resistivity of circulating fluid (ethylene glycol aqueous solution and deionized water) can be controlled.

Communications

- Contact input/output signal
- Serial RS-485 communication
- Analog communication (Refer to “Options” on page 277.)
- DeviceNet communication (Refer to “Options” on page 277.)

Fluid contact parts adopt the materials compatible for various circulating fluids.

-Stainless steel, EPDM, etc.
- Fluorinated fluids: Flourinert™ FC-40
- GALDEN® HT200
- 60% ethylene glycol aqueous solution
- Deionized water/Tap water

DeviceNet™ is a trademark of ODVA.

Fluid contact parts adopt the materials compatible for various circulating fluids.

Construction and Principles

**Circulating fluid circuit**

With the circulating pump, circulating fluid will be discharged to the user’s equipment side. After the circulating fluid will heat or cool the user’s equipment side, it will be returned to the main tank via the heat exchanger.

When the automatic circulating fluid recovery function, which recovers the circulating fluid from the user’s equipment, is selected (refer to page 258), a sub-tank for recovery is installed. The internal pump is used to transfer a circulating fluid from the sub-tank to the main tank.

**Facility water circuit**

When the circulating fluid temperature rises higher than the set temperature, open the solenoid valve to introduce facility water to the heat exchanger.

When the circulating fluid temperature falls back below the set temperature, close the solenoid valve to shut off facility water to the heat exchanger.

DeviceNet™ is a trademark of ODVA.
**Semiconductor**

Example: Temperature control of chamber electrode

- Etching equipment
- Spatter equipment
- Cleaning equipment
- Coating equipment
- Dicing equipment
- Tester, etc.

**Medical**

Example: Blood preservation

- X-ray instrument
- MRI
- Blood preservation equipment

**Food**

Example: Tofu (Bean curd) production

- Bottle-cleaning machine
- Tofu (Bean curd) production equipment
- Noodle-making machine, etc.

**Analysis**

Example: Electronic microscope

- Electron microscope
- X-ray analytical instrument
- Gas chromatography
- Sugar level analytical instrument, etc.

**Machine tool**

Example: Laser machining

- Wire cutting
- Grinder
- Spot welding
- Plasma welding
- Laser machining, etc.

**Printing**

Example: Printing temperature control

- Offset printing machine
- Automatic developing machine
- UV equipment, etc.

**Molding**

Example: Injection molding

- Plastic molding
- Rubber molding
- Wire cable coating machine
- Injection molding, etc.

Water temperature control for forming tofu by mixing the boiled soybean milk and bittern.

Temperature-controlling the laser generating tube enables the laser wave length to be optimised, improving the accuracy of the machined cross sectional area.

Temperature-controlling the mold results in improved product quality.

Temperature-controlling the ink roller enables to control the evaporation amount and viscosity of an ink and optimise the tint of colors.

Prevents the distortion caused by the heat generated by the electronic gun in an electronic microscope.

Guide to Model Selection

1. How much is the temperature in degrees centigrade for the circulating fluid?

Temperature range which can be set with the thermo-chiller
H: 20°C to 90°C
Example) User requirement: 50°C

2. What kind of the circulating fluids will be used?

Relationship between circulating fluid (which can be used with the thermo-chiller) and temperature

Example) User requirement: Tap water

3. How much is the temperature in degrees centigrade for the facility water?

Temperature range which can be set with the thermo-chiller
10°C to 35°C
Example) Facility water temperature of user’s equipment: 15°C
Temperature difference between the circulating fluid and facility water is: 50 – 15 = 35°C.

4. What is the kW for the required cooling capacity?

Example) User requirement: 20 kW → Plot the point where the temperature difference between the circulating fluid and facility water (35°C) intersects the cooling capacity (20 kW) in the cooling capacity graph.

The point plotted in the graph is the requirement from the user. Select the thermo-chiller models exceeding this point. In this case, select the HRW030-H2.
### Example 1: When the heat generation amount in the user’s equipment is known.

Heat generation amount \( Q \): 3.5 kW

Cooling capacity = Considering a safety factor of 20%, \( 3.5 \times 1.2 = 4.2 \text{ kW} \)

### Example 2: When the heat generation amount in the user’s equipment is not known.

Obtain the temperature difference between inlet and outlet by circulating the circulating fluid inside the user’s equipment.

- Heat generation amount \( Q \): Unknown
- Circulating fluid temperature difference \( \Delta T = (T_2 - T_1) \): 6.0°C (6.0 K)
- Circulating fluid outlet temperature \( T_1 \): 20°C (293.15 K)
- Circulating fluid return temperature \( T_2 \): 26°C (299.15 K)
- Circulating fluid flow rate \( L \): 20 L/min
- Circulating fluid: Fluorinated fluid
  - Density \( \gamma \): 1.80 \( \times \) 10\(^3\) kg/m\(^3\)
  - Specific heat \( C \): 0.96 \( \times \) 10\(^3\) J/(kg·K) (at 20°C)

\[ Q = \frac{\Delta T \times L \times \gamma \times C}{60 \times 1000} = \frac{6.0 \times 20 \times 1.80 \times 10^3 \times 0.96 \times 10^2}{60 \times 1000} = 3456 \text{ W} = 3.5 \text{ kW} \]

Cooling capacity = Considering a safety factor of 20%, \( 3.5 \times 1.2 = 4.2 \text{ kW} \)

---

**Example of conventional units (Reference)**

- Unknown
- 6.0°C
- 20°C
- 26°C
- 1.2 m\(^3\)/h
- Fluorinated fluid
  - Density \( \gamma \): 1.80 \( \times \) 10\(^3\) kg/m\(^3\)
  - Specific heat \( C \): 0.23 kcal/kg·°C (at 20°C)

\[ Q = \frac{\Delta T \times L \times \gamma \times C}{860} = \frac{6.0 \times 1.2 \times 1.80 \times 10^3 \times 0.23}{860} = 3.5 \text{ kW} \]

Cooling capacity = Considering a safety factor of 20%, \( 3.5 \times 1.2 = 4.2 \text{ kW} \)
Thermo-chiller

Water bath

After 15 min, cool 70°C down to 50°C.

Required Cooling Capacity Calculation

Example 3. When there is no heat generation, and when cooling the object below a certain temperature and period of time.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cooled substance total volume V</td>
<td>60 L</td>
</tr>
<tr>

</tr>
<tr>
<td>Specific heat C</td>
<td>1.05 x 10^3 J/(kg·K)</td>
</tr>
</tbody>
</table>

(at 50°C)

* Refer to page 266 for the typical physical property values by circulating fluid.

\[
Q = \frac{\Delta T \times V \times \gamma \times C}{h \times 60 \times 1000} = 2436 \text{ W} = 2.4 \text{ kW}
\]

Cooling capacity = Considering a safety factor of 20%,

\[2.4 \times 1.2 = 2.9 \text{ kW (When the circulating fluid temperature is 50°C.)}\]

(In this case, selected thermo-chiller model will be the HRW008-H.)

Example of conventional units (Reference)

\[
Q = \frac{\Delta T \times V \times \gamma \times C}{h \times 860} = \frac{20 \times 0.06 \times 1.74 \times 10^3 \times 0.25}{0.25 \times 860} = 2.4 \text{ kW}
\]

Cooling capacity = Considering a safety factor of 20%,

\[2.4 \times 1.2 = 2.9 \text{ kW (When the circulating fluid temperature is 50°C.)}\]

(In this case, selected thermo-chiller model will be the HRW008-H.)

Precautions on Model Selection

1. Temperature difference between the circulating fluid and facility water

The HRW series exchanges heat between the circulating fluid and facility water directly, so it may not be possible to lower the circulating fluid temperature to the set temperature if the facility water temperature is too high. Check that the facility water temperature can be maintained for the circulating fluid temperature referring to the cooling capacity graph of each model before using.

2. Heating capacity

When setting the circulating fluid temperature at a higher temperature than the room temperature, the circulating fluid temperature will be heated with the thermo-chiller. Heating capacity varies depending on the circulating fluid temperature. Also, the heating capacity varies depending on the circulating fluid temperature. Consider the heat radiation amount or thermal capacity of the user’s equipment. Check beforehand if the required heating capacity is provided, based on the heating capacity graph for the respective model.

3. Pump capacity

<Circulating fluid flow rate>

Pump capacity varies depending on the model selected from the HRW series. Also, circulating fluid flow varies depending on the circulating fluid discharge pressure. Consider the installation height difference between our thermo-chiller and a user’s equipment, and the piping resistance such as circulating fluid pipings, or piping size, or piping curves in the machine. Check beforehand if the required flow rate is achieved, using the pump capacity curves for each respective model.

<Circulating fluid discharge pressure>

Circulating fluid discharge pressure has the possibility to increase up to the maximum pressure in the pump capacity curves for the respective model. Check beforehand if the circulating fluid pipings or circulating fluid circuit of the user’s equipment are fully durable against this pressure.

---

1. It should have no condensation.
2. GALDEN® is a registered trademark, belonging to the Solvay Group or its corresponding owner. Fluorinert™ is a trademark of 3M. Regarding the fluid other than the above, please contact SMC.
3. Outlet temperature when the circulating fluid and facility water are rated flow, and the circulating fluid outlet and return port are directly connected. Installation environment, power supply, and facility water are within specification range and stable. Value obtained 10 minutes after the external load is stabilized. It may be out of ±0.3°C in some other operating conditions.
4. The capacity at the circulating fluid outlet when the circulating fluid temperature is 20°C. Pump capacity at 60 Hz indicates the maximum capacity of the HRW-□□□-HS (pump inverter type).
5. Applicable to the HRW-□□□-HS (pump inverter type) only.
6. Minimum volume required for operating only the thermo-chiller. (Circulating fluid temperature: 20°C, including the thermo-chiller’s internal pipings or heat exchanger)
7. The automatic circulating fluid recovery function will be provided by selecting option Z for collecting the circulating fluid inside an external piping.
8. Required flow rate for cooling capacity or maintaining the temperature stability.
9. It should have no condensation.
10. Weight in the dry state without circulating fluids.

* If the circulating fluid flow drops below 2 L/min., the shutdown alarm activates and operation stops. Do not use the product when the flow exceeds 16 L/min., since the flow cannot be displayed accurately.

* Pump capacity at 60 Hz indicates the maximum capacity of the HRW002-HS (pump inverter type).

* When pump inverter is operating at frequency of 60 Hz (maximum).

* If the circulating fluid flow drops below 8 L/min., the shutdown alarm activates and operation stops. Do not use the product when the flow exceeds 50 L/min., since the flow cannot be displayed accurately.

* Pump capacity at 60 Hz indicates the maximum capacity of the HRW008-HS/015-HS/030-HS (pump inverter type).

Specifications (For details, please refer to our “Product Specifications” information.)

1. It should have no condensation.
2. Dilute pure ethylene glycol with tap water. Additives invading fluid contact material such as preservatives cannot be used.
3. Outlet temperature when the circulating fluid and facility water are rated flow, and the circulating fluid outlet and return port are directly connected. Installation environment, power supply, and facility water are within specification range and stable. Value obtained 10 minutes after the external load is stabilized (after stabilization with no load for HRW030-H1). It may be out of this range when a DI control kit (option Y) is used or in some other operating conditions.
4. The capacity at the circulating fluid outlet when the circulating fluid temperature is 20°C. Pump capacity at 60 Hz indicates the maximum capacity of the HRW008-H1S (pump inverter type).
5. Applicable to the HRW008-H1S (pump inverter type) only.
6. Minimum volume required for operating only the thermo-chiller. (Circulating fluid temperature: 20°C, including the thermo-chiller’s internal pipping or heat exchanger)
7. The automatic circulating fluid recovering function will be provided by selecting option Z for collecting the circulating fluid inside an external piping.
8. Required flow rate for cooling capacity or maintaining the temperature stability.
9. Panel dimensions. These dimensions do not include possible protrusions such as a breaker handle.
10. Weight in the dry state without circulating fluids.

1. If there should have no condensation.
2. If tap water or deionized water is used, please use water that conforms to Water Quality Standards of the Japan Refrigeration and Air Conditioning Industry Association (JRA GL-02-1994/cooling water system - circulation type - make-up water). The electric conductivity of the deionized water used as the fluid varies depending on the operating conditions.
3. Outlet temperature when the circulating fluid and facility water are rated flow, and the circulating fluid outlet and return port are directly connected. Installation environment, power supply, and facility water are within specification range and stable. Value obtained 10 minutes after the external load is stabilized (after stabilization with no load for HRW002-H2). It may be out of this range when a DI control kit (option Y) is used or in some other operating conditions.
4. The capacity at the circulating fluid outlet when the circulating fluid temperature is 20°C. Pump capacity at 60 Hz indicates the maximum capacity of the HRW002-H2S (pump inverter type).
5. Applicable to the HRW002-H2S (pump inverter type) only.
6. Minimum volume required for operating only the thermo-chiller. (Circulating fluid temperature: 20°C, including the thermo-chiller's internal pipings or heat exchanger)
7. The automatic circulating fluid recovery function will be provided by selecting option Z for collecting the circulating fluid inside an external piping.
8. Required flow rate for cooling capacity or maintaining the temperature stability.
9. Panel dimensions. These dimensions do not include possible protrusions such as a breaker handle.
10. Weight in the dry state without circulating fluids

#### Input signal
- **Insulation method**: Photocoupler
- **Rated input voltage**: 24 VDC
- **Operating voltage range**: 21.6 to 26.4 VDC
- **Rated input current**: 5 mA TYP
- **Input impedance**: 4.7 kΩ

#### Output signal
- **Rated load voltage**: 48 VAC or less/30 VDC or less
- **Maximum load current (total)**: When using the power supply of the Thermo-chiller: 200 mA DC (Resistance load/Inductive load)
  When using the power supply of the user’s equipment: 800 mA AC/DC (Resistance load/Inductive load)

#### Alarm signal
- **Rated load voltage**: 48 VAC or less/30 VDC or less
- **Maximum load current**: 800 mA AC/DC (Resistance load/Inductive load)

#### EMO signal
- **Rated load voltage**: 48 VAC or less/30 VDC or less
- **Maximum load current**: 800 mA AC/DC (Resistance load/Inductive load)

*1 The custom function is equipped for contact input/output. Using the custom function enables the user to set the signal type for contact input/output or pin assignment numbers. For details, please refer to the “Communication Specifications” information.
Communication Functions
(For details, please refer to our “Communication Specifications” information.)

Serial RS-485
The serial RS-485 enables the following items to be written and read out.

Writing
Run/Stop
Circulating fluid temperature setting
Circulating fluid automatic recovery start/stop

Readout
Circulating fluid present temperature
Circulating fluid flow
Circulating fluid discharge pressure
Circulating fluid electric resistivity
Alarm occurrence information
Status (operating condition) information

*1 Only when the circulating fluid automatic recovery function (option Z) is selected.
*2 Only when the DI control kit (option Y) is selected.

</tbody>
</table>
Options have to be selected when ordering the thermo-chiller. It is not possible to add them after purchasing the unit.

**C** Option symbol

Analog Communication

HRW - - C

Analog communication

In addition to the standard contact input/output signal communication and the serial RS-485 communication, analog communication function can be added. The analog communication function enables to write and read out the following items.

- **Writing**: Circulating fluid temperature setting
- **Reading**: Circulating fluid present temperature

1 Only when the DI control kit (option Y) is selected.

Scaling voltage - circulating fluid temperature can be set arbitrarily by user. For details, please refer to our “Communication Specifications” information.

**N** Option symbol

NPT Fitting

HRW - - N

NPT fitting

An adapter is included to change the connection parts of circulating fluid piping and facility water piping to NPT thread type. The adapter must be installed by user.

**Y** Option symbol

DI Control Kit

HRW - - Y

DI control kit

Select this option if you want to maintain the electric resistivity (DI level) of the circulating fluid at a certain level. However, some components have to be fitted user. For details, refer to specification table for this option. Please note that this is not applicable to the fluorinated liquid type.

- Install the DI filter outside the thermo-chiller for piping. Secure the space for installing the DI filter in the rear side of the thermo-chiller.
- It may go outside of the temperature stability range of ±0.3°C when this option is used in some operating conditions.

**D** Option symbol

DeviceNet Communication

HRW - - D

DeviceNet™ communication

In addition to the standard contact input/output signal communication and the serial RS-485 communication, DeviceNet function can be added. DeviceNet function enables to write and read out the following items.

- **Writing**: Run/Stop, Circulating fluid temperature setting, Circulating fluid automatic recovery start/stop

1 Only when the DI control kit (option Y) is selected.

- **Reading**: Circulating fluid present temperature, Circulating fluid flow, Circulating fluid discharge pressure, Electric resistivity, Alarm occurrence information, Status (operating condition) information

1 Only when the circulating fluid automatic recovery function (option Z) is selected.

For details, please refer to our “Communication Specifications” information.

**W** Option symbol

SI Unit Only

HRW - - W

SI unit only

The circulating fluid temperature and pressure are displayed in SI units [MPa/°C] only. If this option is not selected, a product with a unit selection function will be provided by default.

1 No change in external dimensions

### SI Unit Only

1 The DI filter is needed to control the DI level. (SMC Part No.: HRZ-DF001)
2 Please purchase additionally because the DI filter is not included in this option. Also, if necessary, additionally purchase the insulating material for the DI filter. (SMC Part No.: HRZ-DF002)
Circulating fluid automatic recovery

Select this option for users who want to use the circulating fluid automatic recovery function. The automatic recovery function is a device which can recover the circulating fluid inside pipings into a sub-tank of the thermo-chiller by the external communication or operation display panel.

Some components need to be fitted by user. For details, consult “Product Specifications” information for these options.

<table>

</tbody>
</table>

1. This is the space volume of the sub-tank when the liquid level of the circulating fluid is within the specification. Guideline of the recovery volume is 80% of the circulating fluid recoverable volume.
2. Before piping, clean inside the pipings with air blow, etc. Use the piping with no dust generation by purge gas. When using resin tube, where necessary, use insert fittings, etc. in order not to deform the tubings when connecting to self-align fittings.
3. At the time of shipping from factory, it is set to 0.2 MPa.
4. For details, please refer to our “Communication Specifications” information.
HRW Series
Optional Accessories

① Bypass Piping Set

When the circulating fluid goes below the rated flow, cooling capacity will be reduced and the temperature stability will be badly affected. In such a case, use the bypass piping set.

</table>

* 2 pieces per set (for 1 unit) (HRZ-TK002)
### 3. 4-Port Manifold

4-branching the circulating fluid enables 4 temperature controls at the maximum with the 1 unit thermo-chiller. Order the heat insulator for 4 port manifold (HRW-MA002) separately if necessary.

#### Part no. | Applicable model
--- | ---
HRW-MA001 | Common for all models
HRW-MA002 | Common for all models

Mounting view (Rear side)

---

### 4. DI Filter

This is the ion replacement resin to maintain the electric resistivity of the circulating fluid. Users who selected the DI control kit (option Y) need to purchase the DI filter separately.

#### Part no. | Applicable model
--- | ---
HRZ-DF001 | Common for all models which can select the DI control kit (option Y)

*The DI filters are consumable. Depending on the status (electric resistivity set value, circulating fluid temperature, piping volume, etc.), product life cycles will vary accordingly.*

#### 4 x Rc1/2

Approx. 220 mm

Approx. ø220 mm

Weight: Approx. 20 kg

---

### 5. Insulating Material for DI Filter

When the DI filter is used at a high temperature, we recommend that you use this insulating material to protect the radiated heat from the DI filter or possible burns. We also recommend that you use this to prevent heat absorption from the DI filter and to avoid forming condensation.

#### Part no. | Applicable model
--- | ---
HRZ-DF002 | Common for all models which can select the DI control kit (option Y)
### 6 Contaminant Filter

A filter mounted in the circulating fluid circuit to eliminate the dust which is contained in the circulating fluid. (Filtration: 20 µm) It is provided with its own heat insulator.

<table>
<thead>
<tr>
<th>Part no.</th>
<th>Applicable model</th>
</tr>

</tr>
</thead>
<tbody>
<tr>
<td>HRZ-BR002</td>
<td>Common for all ethylene glycol-type models</td>
</tr>
</tbody>
</table>

![Concentration Meter](image)
Be sure to read this before handling the products. Refer to page 383 for safety instructions and pages 384 to 387 for temperature control equipment precautions.

**Design**

**Warning**
1. This catalog shows the specifications of a single unit.
   1. For details, please refer to our “Product Specifications” and thoroughly consider the adaptability between the user’s system and this unit.
   2. Although the protection circuit as a single unit is installed, the user is requested to carry out the safety design for the whole system.

**Selection**

**Caution**
1. Model selection
   In order to select the correct thermo-chiller model, the amount of thermal generation from the user’s system, the operating circulating fluid, and its circulating flow are required. Select a model, by referring to the guideline to model selection on page 263.

2. Option selection
   Options have to be selected when ordering the thermo-chiller. It is not possible to add them after purchasing the unit.

**Handling**

**Warning**
1. Thoroughly read the Operation Manual.
   Read the Operation Manual completely before operation, and keep this manual available whenever necessary.

**Operating Environment/Storage Environment**

**Caution**
1. Do not use in the following environment because it will lead to a breakdown.
   1. Environment like written in “Temperature Control Equipment Precautions.”
   2. Locations where spatter will adhere to when welding.
   3. Locations where it is likely that the leakage of flammable gas may occur.
   4. Locations where the ambient temperature exceeds the limits as mentioned below.
      - During operation: 10°C to 35°C
      - During storage: 0°C to 50°C (but as long as water or circulating fluid are not left inside the pipings)
   5. Locations where the ambient relative humidity exceeds the limit as mentioned below.
      - During operation: 30% to 70%
      - During storage: 15% to 85%
   6. (Inside the operation facilities) locations where there is not sufficient space for maintenance.
   7. In locations where the ambient pressure exceeds the atmospheric pressure.

2. The Thermo-chiller does not have clean room specification. It generates dust from the pump inside the unit and the cooling fan for the unit inside.

**Circulating Fluid**

**Caution**
1. Avoid oil or other foreign matter entering the circulating fluid.
2. Use ethylene glycol that does not contain additives such as preservatives.
3. The condensation of ethylene glycol aqueous solution must be 60% or less. If the condensation is too high, the pump will be overloaded, resulting in occurrence of “Pump Breaker Trip FLT.”
4. Avoid water moisture entering the fluorinated fluid.
5. Use tap water (including for diluting ethylene glycol aqueous solution) which must meet the water quality standards as mentioned below.

**Tap Water (as Circulating Fluid) Quality Standards**

- In the case of [MΩ·cm], it will be 0.001 to 0.01.
- Factors that have an effect on corrosion or scale generation.
- Even if the water quality standards are met, complete prevention of corrosion is not guaranteed.
**Warning**

**<Water-cooled refrigeration>**

1. The water-cooled refrigeration type thermo-chiller radiates heat to the facility water.

   Prepare the facility water system that satisfies the facility water specifications below.

2. When using tap water as facility water, use tap water that conforms to the appropriate water quality standards.

   Use tap water that conforms to the standards shown below.

---

---

**Caution**

1. Avoid using this product outdoors.

2. Install on a rigid floor which can withstand this product’s weight.

3. Please install a suitable anchor bolt for the anti-quake bracket taking into consideration the user’s floor material.

4. Avoid placing heavy objects on this product.

---

### **Transportation/Carriage/Movement**

**Warning**

1. **Transporting with forklift**
   1. It is not possible to hang this product.
   2. The fork insertion position is either on the left side face or right side face of the unit. Be careful not to bump the fork against a caster or level foot and be sure to put through the fork to the opposite side.
   3. Be careful not to bump the fork to the cover panel or piping ports.

2. **Transporting with casters**
   1. This product is heavy and should be moved by at least two people.
   2. Do not grip the pipings on the rear side or the handles of the panel.

---

### **Mounting/Installation**

**Caution**

1. Regarding the circulating fluid pipings, consider carefully the suitability for shutoff pressure, temperature and circulating fluid.

   If the operating performance specifications are regularly exceeded, the pipings may burst during operation.

2. The surface of the circulating fluid pipings should be covered with the insulating materials which can effectively confine the heat.

   Absorbing the heat from the surface of pipings may reduce the cooling capacity performance and the heating capacity may be shortened due to heat radiation.

3. When using fluorinated liquid as the circulating fluid, do not use pipe tape.

   Liquid leakage may occur around the pipe tape.

   For sealant, we recommend that you use the following sealant: SMC Part No., HRZ-S0003 (Silicone sealant)

4. For the circulating fluid pipings, use clean pipings which have no dust, oil or water moisture inside the pipings, and blow with air prior to undertaking any piping works.

   If any dust, oil or water moisture enters the circulating fluid circuit, inferior cooling performance or equipment failure due to frozen water may occur, resulting in bubbles in the circulating fluid inside the tank.

5. Select the circulating fluid pipings which can exceed the required rated flow.

   For the rated flow, refer to the pump capacity table.

6. For the circulating fluid piping connection, install a drain pan just in case the circulating fluid may leak.

7. Do not return the circulating fluid to the unit by installing a pump in the user system.
**HRW Series**

Specific Product Precautions 3

Be sure to read this before handling the products. Refer to page 383 for safety instructions and pages 384 to 387 for temperature control equipment precautions.

---

**Electrical Wiring**

**Caution**

1. Power supply and signal cable should be prepared by user.

2. Provide a stable power supply which is not affected by surge or distortion.

   If the voltage increase ratio (dV/dt) at the zero cross should exceed 40 V/200 µsec., it may result in malfunction.

3. This product is installed with a breaker with the following operating characteristics.

   For the user’s equipment (inlet side), use a breaker whose operating time is equal to or longer than the breaker of this product. If a breaker with shorter operating time is connected, the user’s equipment could be cut off due to the inrush current of the motor of this product.

**Breaker Operating Characteristics**

**Common for all models**

---

**Operation**

**Caution**

1. Confirmation before operation

   1. The circulating fluid should be within the specified range of “HIGH” and “LOW.”
   2. Be sure to tighten the cap for the circulating fluid port until the click sound is heard.

2. Emergency stop method

   In the case of an emergency, press down the EMO switch which is fitted on the front face of this product.

---

**Maintenance**

**Warning**

1. Do not operate the switch with wet hands or touch electrical parts such as an electrical plug. This will lead to an electrical shock.

2. Do not splash water directly on this product for cleaning. This will lead to an electrical shock or a fire.

3. When the panel was removed for the purpose of inspection or cleaning, mount the panel after works were done.

   If the panel is still open, or running the equipment with the panel removed, it may cause an injury or electric shock.

**Caution**

1. In order to prevent a sudden product failure of the unit, replace the replacement parts every 36 months.

2. Perform an inspection of the circulating fluid every 3 months.

   1. In the case of fluorinated fluids:
      - Discharge the circulating liquid and avoid any dirty objects, or water moisture, or foreign matter entering the system.
   2. In the case of ethylene glycol aqueous solution:
      - Maintain the condensation at 60%.
   3. In case of tap water, deionized water:
      - Replacement is recommended.

3. Check the water quality of facility water every 3 months.

   Regarding the water quality standards for facility water, refer to page 386.
