High Precision Filter for Liquids

FGH Series

Filtration efficiency: 99% or more

HEPO Ⅱ element

Filtration accuracy: 2, 4, 6 or 13 μm (Filtration efficiency 99%)

Membrane element

Filtration accuracy: 0.2 or 0.4 μm (Filtration efficiency 99.9%)

High Precision Filter for Liquids
FGH Series

Filtration efficiency: 99% or more

Prevents particle generation in the housing

Internal particle generation is eliminated by using stainless steel 316 and PTFE for the wetted material and adopting a clamp ring system.

Integrity inspection conducted.

100%-integrity inspection is conducted.

Prevents residual liquid accumulation in the case

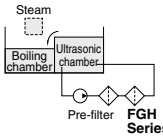
A simple structure prevents the residual liquid from accumulating in the case.

Application examples

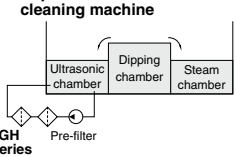
Ultrasonic cleaning machine

- Manufacture of electric and electronic industrial components
- Manufacture of semiconductor-related components

Dual chamber ultrasonic cleaning machine

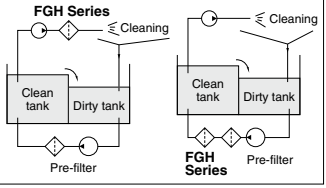


Triple chamber ultrasonic cleaning machine



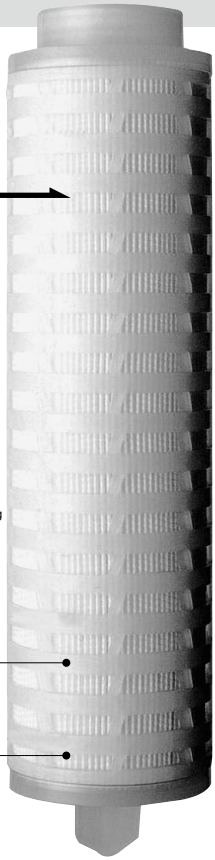
Jet cleaning machine

- Camera, lens and bearing for manufacture of high-precision processing components
- Nozzle for manufacture of automobile components



HEPO Ⅱ Element

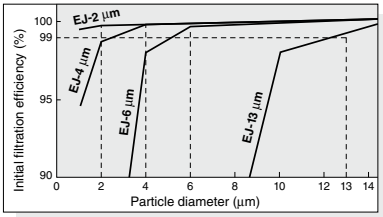
Filtration accuracy: 2, 4, 6 or 13 μm (Filtration efficiency 99%)



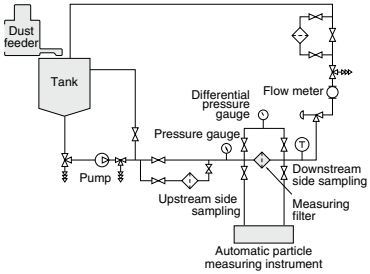
High precision filtration: 99% or more

High accuracy filtration is achieved by using a HEPO Ⅱ element with filtration accuracy of 2, 4, 6 or 13 μm (Filtration efficiency 99%).

[Test conditions]
Fluid: water / Test dust: ACFTD / Flow rate: 35 L/min
Dust concentration: 10 mg/L / Temperature: 20°C
Element: EJ801S



Schematic diagram of filtration efficiency data measuring circuit



No outflow of fibers or elution of components from the filter media

There is almost no outflow of fibers or elution of components from the filter media because it uses ultrafine and long polyester fiber nonwoven fabric with no binder.

Applicable for a wide range of liquids

The element is applicable for a wide range of liquids because it adopts PTFE seals.

Applicable fluids

Classification	Description
Water	Industrial water, distilled water, ion-exchange water, DI water (Deionized water), ultrapure water
Alcohol	Isopropyl alcohol (IPA, propanol) Ethyl alcohol (ethanol) Methyl alcohol (methanol) Butyl alcohol (butanol) Ethylene glycol
Hydrocarbon	Petroleum ether, petroleum benzene
Ester	Methyl acetate, ethyl acetate, methyl acrylate
Oil/fuel oil	Hydraulic fluid, lubricating oil, light oil, kerosene, cutting oil, grinding oil
Others	Ammonia (10% solvent), ethyl ether, isopropyl ether

Membrane Element

Filtration accuracy: 0.2 or 0.4 μm (Filtration efficiency 99.9%)

High precision filtration: 99.9% or more

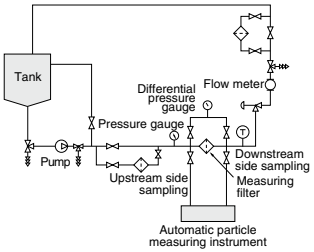
High accuracy filtration is achieved by using a membrane element with filtration accuracy of 0.2 or 0.4 μm (Filtration efficiency 99.9%)

Test conditions

Fluid: DI water (Deionized water)
Contaminant: polystyrene latex particles
Particle measuring method: 0.2 μm automatic particle measuring instrument

Filtration rating (μm)	Particle diameter (μm)	Number of particles (/10 mL)		Filtration efficiency (%)
		Upstream side	Downstream side	
0.2	0.208	146380	1	99.999
0.4	0.309	103957	2727	97.4
	0.41	95019	29.9	99.97

Schematic diagram of filtration efficiency data measuring circuit



Easy to handle

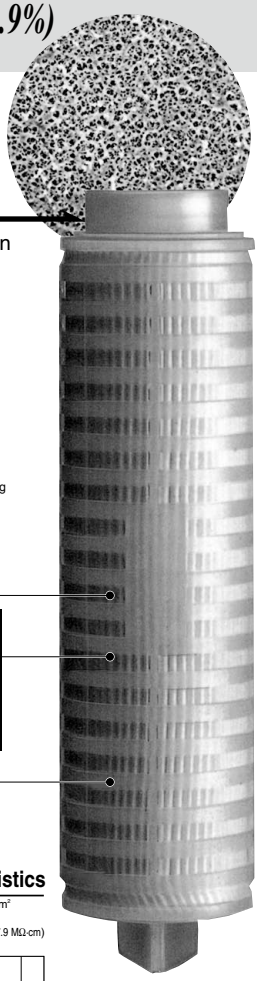
There is no need of hydrophilic treatment using IPA and the like, because the element uses a hydrophilic filter media.

Long filtration life

The element has a long filtration life because of the high porosity and low pressure drop of the filter media.
The dust retention amount of the 0.2 μm version is 90 g.

Pre-rinsed with ultrapure water

(0.2 μm version only)



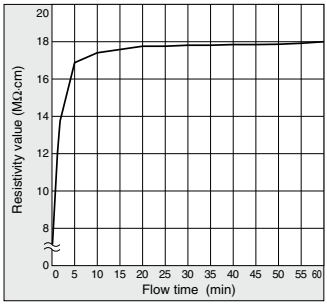
Applicable fluids

Classification	0.2 μm	0.4 μm
Water	DI water (Deionized water), ultrapure water, ion-exchange water, distilled water	
Alkalis	Sodium hydroxide (10%) Potassium hydroxide (10%) Ammonia water (28%)	Ammonia water (28%)*
Aldehyde	Formaldehyde (35%)	Formaldehyde (35%)*
Alcohol	Methyl alcohol, butyl alcohol, ethyl alcohol, propyl alcohol	
Ether	Dioxane* Ethyl ether*	Ethyl ether*
Hydrocarbon	Benzene* Hexane*	Benzene*, toluene*, hexane*, xylene*

* Can be used depending on temperature conditions (please consult with SMC).

Resistivity recovery characteristics

[Measuring conditions]
Element used: ED801S-X20
Element size: ø70 x L247
Filtration area: 4000 cm²
Fluid: Ultrapure water
(resistivity value 17.9 MΩ·cm)
Flow rate: 10 L/min



* Per JISK3834
