Visibility of pressure gauge is improved  
in various installation places

## Installation and removal of pressure gauge cover is possible with one-touch.

Easy to adjust limit indicator.

## Mounting angle of pressure gauge is selectable depending on the piping direction

\* Mounting angle can be changed as desired. For details, refer to "Procedure for replacing or changing the mounting angle of a pressure gauge" on page 584.

Mounting angle	0°	90°
Mounting angle view		
Mounting angle	180°	270°
Mounting angle view		

## Pressure gauge anti-revolving mechanism

\* Pressure gauge will not be revolved even after the handle is operated.

## Space saving, Labor saving

### Panel-cut for pressure gauge is not necessary.

In the case of panel mounting, the number of holes for taking out the products (pressure gauge plus regulator handle parts) can be reduced into one location. By changing the angle of pressure gauge, the internal volume of a panel can be used effectively.

■ Mounting example: In the case of aligning three ARG30s in line.

Mounting at **90°** (In the case of restricted in side direction)

Surface of panel

Bottom of panel

Mounting at **45°** (In the case of considering the effectiveness of panel)  
\* Contact SMC separately, since it will be made to order. (Refer to page 572.)

Surface of panel

Bottom of panel

In the case of ARG30, dimension in height can be reduced by approx. 30 mm.

## How to Order

ACG 30 - 03 G1 -

### Body size

Symbol	Port size
20	1/8
30	3/8
40	1/2

### Model combination

Symbol	Combination				
	Air filter	Regulator with Built-in Pressure Gauge	Lubricator	Filter Regulator with Built-in Pressure Gauge	Mist separator
Nil	(1)	(2)	(3)	—	—
A	—	—	(2)	(1)	—
B <sup>(1)</sup>	(1)	(2)	—	—	—
C	(1)	(3)	—	—	(2)
D	—	—	—	(1)	(2)

Note 1) Wall mount is not available for size 20 regulator with downward facing handle in B combination. Contact SMC when wall mount is needed.

Note 2) The number inside ( ) indicates the combination order counted from the inlet side.

### Thread type

Symbol	Type
Nil	Rc
N <sup>(3)</sup>	NPT
F <sup>(4)</sup>	G

Note 3) Drain guide is NPT 1/8 for ACG20 and NPT 1/4 for ACG30 and 40. Auto-drain port is provided with ø3.8" One-touch fitting (applicable to ACG30 and 40).

Note 4) Drain guide is G1/8 for ACG20 and G1/4 for ACG30 and 40.

### Port size

Symbol	Port size	Body size		
		20	30	40
01	1/8	●	—	—
02	1/4	●	●	●
03	3/8	—	●	●
04	1/2	—	—	●

### Option

Symbol	Description	Applicable model
Nil	—	—
C	Float type auto-drain (Normally closed)	ACG20□ to 40□
D	Float type auto-drain (Normally open)	ACG30□, 40□

### Mounting angle of pressure gauge °0

Note 5) Mounting angle of pressure gauge is G1 only. If other mounting angles are needed, contact SMC.

\* Possible to change to the optional mounting angles. For details, refer to page 584, "Procedure for replacing or changing the mounting angle of a pressure gauge".

### Semi-standard

Symbol	Description	Applicable model
Nil	—	—
1 <sup>(8)</sup>	0.02 to 0.2 MPa setting	ACG20□ to 40□
2	Metal bowl	ACG20□ to 40□
3	Lubricator with drain cock	ACG20□ to 40□
6	Nylon bowl	ACG20□ to 40□
8	Metal bowl with level gauge	ACG30□, 40□
C	With bowl guard	ACG20□
J <sup>(9)</sup>	Filter case with drain guide	ACG20□ to 40□
N	Non-relieving type	ACG20□ to 40□
R	Flow direction: Right to left	ACG20□ to 40□
W	Drain cock with barb fitting: ø6 x ø4 nylon tubing	ACG30□, 40□
Y	Regulator with upward facing handle	ACG20□ to 40□
Z <sup>(10)</sup>	Name plate and pressure gauge in imperial units (psi), caution plate for bowl (psi · °F)	ACG20□ to 40□

\* When more than one specification is required, indicate in ascending alphanumeric order.

Note 8) Adjusting spring and pressure gauge (full-span 0.3 MPa) are different from those for the standard specification. Outlet pressure may increase by 0.2 MPa or more.

Note 9) Without a valve function.

Note 10) For thread type NPT.

This product is for overseas use only according to the new Measurement Law. (The SI unit type is provided for use in Japan.) Both MPa and psi are used for the pressure switch unit.

### Attachment

Symbol	Description	Attachment mounting position	Applicable model	Port size for intermediate air release
Nil	—	—	—	—
K	Check valve	AF + ARG + [K] + AL AWG + [K] + AL	ACG20 to 40 ACG20A to 40A	ACG20□: 1/8 ACG30□: 1/4 ACG40□: 3/8
S <sup>(7)</sup>	Pressure switch	AF + ARG + [S] + AL AF + [S] + ARG AF + AFM + [S] + ARG	ACG20 to 40 ACG20B to 40B ACG20C to 40C	—
V	Residual pressure relief 3 port valve	AF + ARG + AL + [V] AWG + AL + [V] AF + ARG + [V] AF + AFM + ARG + [V] AWG + AFM + [V]	ACG20 to 40 ACG20A to 40A ACG20B to 40B ACG20C to 40C ACG20D to 40D	—

Note 6) When more than one attachment is required, order in alphabetical order.

Note 7) Pressure switch cannot be mounted on the inlet and outlet sides of an ARG with an upward facing handle (optional specification: -Y).

	Check valve <sup>(3)</sup> <sup>(4)</sup>		AKM2000-□01, □02	AKM3000-(□01, □02	AKM4000-(□02), □03
	Pressure switch <sup>(4)</sup> <sup>(5)</sup>		IS10M-20	IS10M-30	IS10M-40
	Residual pressure relief 3 port valve <sup>(4)</sup>		VHS20-□01, □02	VHS30-□02, □03	VHS40-□02, □03, □04

Note 1) Contact SMC regarding the connection thread NPT and pressure gauge supply for psi unit specifications.

Note 2) Minimum operating pressure: 0.1 MPa for N.O. type, 0.1 MPa for N.C. type (AD27) and 0.15 MPa for N.C. type (AD37 and 47). Contact SMC for psi and °F specifications.

Note 3) For F.R.L. units, port sizes not in ( ) are for standard application.

Note 4) Separate spacers are required for modular unit.

Note 5) Pressure switch cannot be mounted on the inlet and outlet sides of an ARG with an upward facing handle (semi-standard specification: -Y).

## Flow Characteristics

Condition: Inlet pressure 0.7 MPa

## Pressure Characteristics

Conditions: Inlet pressure 0.7 MPa, Outlet pressure 0.2 MPa, Flow rate 20 L/min (ANR)

## ⚠ Specific Product Precautions

**Be sure to read before handling.**

**Refer to front matter 43 for Safety Instructions and pages 365 to 369 for F.R.L. Precautions.**

### Piping

#### ⚠ Warning

- When mounting a check valve, make sure the arrow (IN side) points in the correct direction of air flow.

### Selection

#### ⚠ Warning

- Float type auto drain
  - Operate under the following conditions to avoid malfunction.
  - <N.O. type>**
    - Operating compressor: 0.75 kW (100 L/min (ANR)) or more.
  - When using 2 or more auto drains, multiply the value above by the number of auto drains to find the capacity of the compressors you will need.
  - For example, when using 2 auto drains, 1.5 kW (200 L/min (ANR)) of the compressor capacity is required.
  - Operating pressure: 0.1 MPa or more.
  - <N.C. type>**
    - Operating pressure for AD27: 0.1 MPa or more.
    - Operating pressure for AD37/47: 0.15 MPa or more.
- Use a regulator or filter regulator with a back flow mechanism when mounting a 3 port valve for residual pressure release on the IN side to ensure the release of the residual pressure. Otherwise, residual pressure will not be fully released.

### Selection

#### ⚠ Caution

- Mounting a 3 port valve for residual pressure release on the IN side of the lubricator can cause lubricant to back flow. Take measures to prevent lubricant from splashing by installing a filter on the EXH port.
- An F.R.L. unit shipped from the plant has its model number labeled. However, components that are combined together during the distribution process do not have a label on them.

### Air Supply

#### ⚠ Caution

- Use an air filter with 5 μm or less filtration rating on the inlet side of the valve to avoid any damage to the seat caused by dust when mounting a 3 port valve for residual pressure release on the inlet side.

<b>ACG30</b>	108.5	35	—	14	7	156	123	122	128	148
<b>ACG40</b>	114.5	40	—	18	9	186	155	154	160	180

Note 1) In the case of the ACG20's standard specification (downward facing handle), the wall mounting is not possible using the lower side mounting hole on the spacer with a bracket. Use the upper side mounting hole when wall mounting.

Note 2) In the case of the upward facing handle in the semi-standard specification, the C dimension will change. Also, in the case of the ACG20, wall mounting is possible by using the lower side mounting hole on the spacer with a bracket.

Note 3) For the option/semi-standard specifications (with auto drain, with barb fitting, with drain guide, metal bowl, or metal bowl with level gauge), the total length (B dimension) will vary.

ACG40B	114.5	40	40	—	18	9	9	186	155	154	160	180

Note 1) In the case of the ACG20B's standard specification (downward facing handle), the wall mounting is not possible using the lower side mounting hole on the spacer with a bracket. Contact SMC.

Note 2) In the case of the upward facing handle in the semi-standard specification, the C dimension will change. Also, in the case of the ACG20B, wall mounting is possible by using the lower side mounting hole on the spacer with a bracket.

Note 3) For the optional/semi-standard specifications (with auto drain, with barb fitting, with drain guide, metal bowl, or metal bowl with level gauge), the total length (B dimension) will vary.

# Series ACG20C/30C/40C

ACG20C

ACG40C

## Standard Specifications

Model		ACG20C	ACG30C	ACG40C
Component	Air filter	AF20	AF30	AF40
	Mist separator	AFM20	AFM30	AFM40
	Regulator	ARG20	ARG30	ARG40
Port size		1/8 1/4	1/4 3/8	1/4 3/8 1/2
Fluid		Air		
Proof pressure		1.5 MPa		
Maximum operating pressure		1.0 MPa		
Regulating pressure range		0.05 to 0.85 MPa		
Rated flow (L/min (ANR)) <sup>(1)</sup>		200	450	1100
Relief pressure		Set pressure + 0.05 MPa (at relief flow rate of 0.1 L/min (ANR))		
Ambient and fluid temperature		-5 to 60°C (With no freezing)		
Nominal filtration rating		AF: 5 µm; AFM: 0.3 µm (Filtration efficiency 99.9 %)		
Outlet side oil mist concentration		Maximum 1.0 mg/m <sup>3</sup> (ANR) (approx. 0.8 ppm) <sup>(2)(3)</sup>		
Regulator construction		Relieving type		
Bowl material		Polycarbonate		
Bowl guard		Semi-standard	Standard	
Weight (kg)		0.53	1.06	1.89

Note 1) Condition: Mist separator inlet pressure 0.7 MPa. The rated flow varies depending on the inlet pressure. Keep the air flow within the rated flow to prevent an outflow of lubricant to the outlet side.

Note 2) At compressor discharge 30 mg/m<sup>3</sup> (ANR).

Note 3) Bowl O-ring and other O-rings are slightly lubricated.

## Attachment/Option Part No.

Description			Attachment/Option part no.

# Series ACG Air Combination Attachments

## Check Valve (K): 1/8, 1/4, 3/8

RoHS

A check valve with intermediate air release port can be easily installed to prevent a back flow of lubricant when redirecting the air flow and releasing the air on the outlet side of the regulator.

### Specifications

Model	Effective area (mm <sup>2</sup> )
AKM2000	28
AKM3000	55
AKM4000	111

Be sure to use above check valves when redirecting the air flow on the inlet side of the lubricator. Threads for IN and OUT ports are not machined.

Model	Bypass port size	A	B	C	D	E	Applicable model
AKM2000	1/8, 1/4	40	40	28	11	11	ACG20/ACG20A
AKM3000	1/8, 1/4	53	48	34	14	13	ACG30/ACG30A
AKM4000	1/4, 3/8	70	54	42	18	15	ACG40/ACG40A

\* Refer to the Standard Specifications and Attachment on page 546 or 549 for the standard bypass port size when the check valve is used with ACG.

Note) Separate spacers are required for modular unit.

Note) For detailed specifications on the IS10 series, please refer to series IS10 in Best Pneumatics No.6.

## Pressure Relief 3 Port Valve (V)

With the use of a 3 port valve for residual pressure release, pressure left in the line can be easily exhausted.

### Specifications

Model	Port size		Effective area (mm <sup>2</sup> ) ( ): Effective Area mm <sup>2</sup> (Ov)

			0 to 45 psi	GB2-P3AS	GB3-P3AS	GB4-P3AS

Note 1) Assembly includes a bracket and set nuts.

## Flow Characteristics (Representative Values)

Condition: Inlet pressure 0.7 MPa

## Pressure Characteristics (Representative Values)

Conditions: Inlet pressure 0.7 MPa, Outlet pressure 0.2 MPa, Flow rate 20 L/min (ANR)

**⚠ Specific Product Precautions**

Be sure to read before handling.  
Refer to front matter 43 for Safety  
Instructions and pages 365 to 369  
for F.R.L. Precautions.

**Selection**

**⚠ Warning**

- 1. Releasing the inlet pressure does not mean that all residual pressure is released (the outlet pressure cannot be released). When releasing residual pressure, use a regulator with a backflow function.

**Mounting and Adjustment**

**⚠ Warning**

- 1. Set the regulator while verifying the displayed values of the inlet and outlet pressure gauges. Turning the regulator handle excessively can cause damage to the internal parts.
- 2. Do not use tools on the pressure regulator handle as this may cause damage. It must be operated manually.

**⚠ Caution**

- 1. Be sure to unlock the handle before adjusting the pressure and lock it after setting the pressure.  
Failure to follow this procedure can cause damage to the handle and the outlet pressure may fluctuate.
- Pull the pressure regulator handle to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
- Push the pressure regulator handle to lock. When the handle is not easily locked, turn it left and right a little and then push it (when the handle is locked, the "orange mark", i.e., the gap will disappear).

- 2. When using the regulator between a solenoid valve and an actuator, check the pressure gauge periodically.

#### Symbol

#### Mounting Angle of Pressure Gauge

Symbol	G1	G2	G3	G4
Mounting angle	0°	90°	180°	270°
Mounting angle view				

\* Mounting angles other than 45°, 135°, 225° and 315° are available through the Made to Order (page 572).

\* Possible to change to the optional mounting angles.

For details, refer to page 584, "Procedure for replacing or changing the mounting angle of a pressure gauge".

#### Made to Order

(Refer to pages 571 and 572 for details.)

Symbol	Specifications
X406	Setting and pressure gauge full span 0.4 MPa
X2101□	Special pressure gauge mounting angle (45°, 135°, 225°, 315°)

#### Semi-standard

Symbol	Description
Nil	—
1 <sup>(2)</sup>	0.02 to 0.2 MPa setting
N	Non-relieving type
Z <sup>(2)</sup>	Name plate and pressure gauge in imperial units (psi)

\* When more than one specification is required, indicate in ascending alphanumeric order.

Note 2) Adjusting spring and pressure gauge (full-span 0.3 MPa) are different from those for the standard specification.

All products can be set at 0.2 MPa or more.

Note 3) For thread type NPT.

This product is for overseas use only according to the new Measurement Law. (The SI unit type is provided for use in Japan.)

#### Option (2)

Symbol	Description
Nil	—
H	With set nuts

### Application examples of a regulator with a backflow function

With a built-in mechanism which enables reliable discharge of air pressure from outlet to inlet

#### Example 1)

When the pressure in the rear and the front of the cylinder differs:

#### Circuit diagram

#### Example 2)

When the air supply is cut off and releasing the inlet pressure to the atmosphere, the residual pressure release of the outlet side can be ensured for a safety purpose.

#### Circuit diagram

# Regulator with Built-in Pressure Gauge with Backflow Function *Series ARG20K/30K/40K*

## Standard Specifications

Model	ARG20K	ARG30K	ARG40K
Port size	1/8, 1/4	1/4, 3/8	1/4, 3/8, 1/2
Fluid	Air		
Proof pressure	1.5 MPa		
Maximum operating pressure	1.0 MPa		
Regulating pressure range <sup>(1)</sup>	0.05 to 0.85 MPa		
Relief pressure	Set pressure + 0.05 MPa (at relief flow rate of 0.1 L/min (ANR))		
Ambient and fluid temperature	-5° to 60°C (With no freezing)		
Construction	Relieving type		
Weight (kg)	0.21	0.40	0.57

Note 1) Set the inlet pressure to 0.05 MPa or higher than the set pressure.

## Option Part No.

Applicable model				ARG20K	ARG30K	ARG40K
Option						
Bracket assembly <sup>(1)</sup>				ARG20P-270AS	ARG30P-270AS	ARG40P-270AS
Set nut				ARG20P-260S	ARG30P-260S	ARG40P-260S
Pressure gauge	Pressure gauge display range	Standard	0 to 1.0 MPa	GB2-10AS	GB3-10AS	GB4-10AS
			0 to 0.3 MPa	GB2-3AS	GB3-3AS	GB4-3AS
		Semi-standard	0 to 150 psi	GB2-P10AS	GB3-P10AS	GB4-P10AS
			0 to 45 psi	GB2-P3AS	GB3-P3AS	GB4-P3AS

Note 1) Assembly includes a bracket and set nuts.

## Flow Characteristics (Representative Values)

Condition: Inlet pressure 0.7 MPa

## Pressure Characteristics (Representative Values)

Conditions: Inlet pressure 0.7 MPa, Outlet pressure 0.2 MPa, Flow rate 20 L/min (ANR)

## Working Principle

When the inlet pressure ( $P_1$ ) is higher than the regulating pressure, the check valve ② closes and operates as a normal regulator (Figure 1).

When the inlet pressure ( $P_1$ ) is shut off and released, the check valve ② opens and the pressure in the diaphragm chamber ① is released into the inlet side (Figure 2). This lowers the pressure in the diaphragm chamber ① and the force generated by the pressure regulator spring ③ lifts the diaphragm. Valve ④ opens through the stem, and the outlet pressure is released to the inlet side (Figure 3).

## ⚠ Specific Product Precautions

Be sure to read before handling.  
Refer to front matter 43 for Safety Instructions and pages 365 to 369 for F.R.L. Precautions.

## Mounting and Adjustment

### ⚠ Warning

1. Set the regulator while verifying the displayed values of the inlet and outlet pressure gauges. Turning the regulator handle excessively can cause damage to the internal parts.
2. Do not use tools on the pressure regulator handle as this may cause damage. It must be operated manually.

### ⚠ Caution

1. Be sure to unlock the handle before adjusting the pressure and lock it after setting the pressure.  
Failure to follow this procedure can cause damage to the handle and the outlet pressure may fluctuate.
- Pull the pressure regulator handle to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
- Push the pressure regulator handle to lock. When the handle is not easily locked, turn it left and right a little and then push it (when the handle is locked, the "orange mark", i.e., the gap will disappear).

## Maintenance

### ⚠ Warning

1. When using the regulator between a solenoid valve and an actuator, check the pressure gauge periodically.  
Sudden pressure fluctuations may shorten the durability of the pressure gauge.

Note 1) Including O-ring. Contact SMC regarding the bowl assembly supply for psi and "F" unit specifications.

Note 2) Bowl assembly for AWG30/40 includes a bowl guard (steel band material).

Note 3) Only the standard part numbers are listed in the pressure gauges. For the optional part numbers, refer to page 575.

## ⚠ Specific Product Precautions

Be sure to read before handling.

Refer to front matter 43 for Safety Instructions and pages 365 to 369 for F.R.L. Precautions.

### Selection

### ⚠ Warning

- Residual pressure release (outlet pressure release) is not completed by releasing inlet pressure. To release residual pressure, use a filter regulator with a back flow mechanism.

### Maintenance

### ⚠ Warning

- Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element.

### Mounting and Adjustment

### ⚠ Warning

- Set the regulator while checking the displayed values of the inlet and outlet pressure gauges. Turning the handle excessively can cause damage to the internal parts.
- Do not use tools on the pressure regulator handle as this may cause damage. It must be operated manually.

### ⚠ Caution

- Be sure to unlock the handle before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the handle and the outlet pressure may fluctuate.

- Pull the pressure regulator handle to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
- Push the pressure regulator handle to lock. When the handle is not easily locked, turn it left and right a little and then push it (when the handle is locked, the "orange mark" will disappear).

\* Possible to change to the optional mounting angles.

For details, refer to page 584, "Procedure for replacing or changing the mounting angle of a pressure gauge".

#### Application example of a filter regulator with a backflow function

When the air supply is cut off and releasing the inlet pressure to the atmosphere, the residual pressure release of the outlet side can be ensured for a safety purpose.

Float type auto drain <sup>(2)</sup>			Normally open	—	AD38	AD48
			Normally closed	AD27	AD37	AD47

Note 1) Assembly includes a bracket and set nuts.

Note 2) Minimum operating pressure: N.O. type-0.1 MPa; N.C. type-0.1 MPa (AD27) and 0.15 MPa (AD37/47). Contact SMC regarding the specifications for psi unit and "F".

## Flow Characteristics (Representative Values)

Condition: Inlet pressure 0.7 MPa

## Pressure Characteristics (Representative Values)

Conditions: Inlet pressure 0.7 MPa, Outlet pressure 0.2 MPa, Flow rate 20 L/min (ANR)

## Working Principle

When the inlet pressure ( $P_1$ ) is higher than the regulating pressure, the check valve ② closes and operates as a normal regulator (Figure 1). When the inlet pressure ( $P_1$ ) is shut off and released, the check valve ② opens and the pressure in the diaphragm chamber ① is released into the inlet side (Figure 2). This lowers the pressure in the diaphragm chamber ① and the force generated by the pressure regulator spring ③ lifts the diaphragm. Valve ④ opens through the stem, and the outlet pressure is released to the inlet side (Figure 3).

**Figure 1**

Normal

**Figure 2**

Back flow

## ⚠ Specific Product Precautions

Be sure to read before handling.

Refer to front matter 43 for Safety Instructions and pages 365 to 369 for F.R.L. Precautions.

### Maintenance

#### ⚠ Warning

1. Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element.

### Mounting and Adjustment

#### ⚠ Warning

1. Set the regulator while checking the displayed values of the inlet and outlet pressure gauges. Turning the handle excessively can cause damage to the internal parts.
2. Do not use tools on the pressure regulator handle as this may cause damage. It must be operated manually.

- Push the pressure regulator handle to lock. When the handle is not easily locked, turn it left and right a little and then push it (when the handle is locked, the "orange mark" will disappear).

#### ⚠ Caution

1. Be sure to unlock the handle before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the handle and the outlet pressure may fluctuate.
- Pull the pressure regulator handle to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)

# Series ACG/ARG/AWG Specific Product Precautions

Be sure to read before handling.

Refer to front matter 43 for Safety Instructions and pages 365 to 369 for F.R.L. Precautions.

## Procedure for replacing or changing the mounting angle of a pressure gauge

### Warning

When replacing a pressure gauge and/or changing the mounting angle, release the inlet and outlet pressure completely. It is dangerous to replace the pressure gauge or change the mounting angle while it is under pressure.

#### 1. Advance preparation

Keep the handle unlocked and completely loosened. The unlocked condition of the handle can be visually confirmed by the "Orange line" shown near the bottom of the handle.

#### 2. Removing the handle

To remove the handle, align the ▼ mark on the handle and the ▲ mark on the bonnet and then pull the handle.

#### 3. Removing the clip

When the ▲ mark on the bonnet and the ▼ mark on the pressure regulator guide are aligned, the clip can be seen from the side view of the bonnet. The clip can be picked and removed with tweezers.

\* When adjusting the mark, turn the pressure regulator guide clockwise for adjustment.

#### 4. Removing the pressure gauge

Pull the pressure gauge out by holding the outer edge of the dial.

\* Do not touch the internal mechanical portion (shown inside the dotted box). Accuracy of the pressure gauge may be adversely affected.

#### 5. Setting the pressure gauge

After the mounting angle is adjusted as required, hold the outer edge of the pressure gauge dial and gently press down. For reference, the required clearance between the bottom of the dial and the top of the pressure regulator guide is shown in table 1.

Note 1) When the pressure gauge cannot be easily positioned, slightly rotate it. (The cog from the planet gear of the pressure regulator guide may be caught vertically in the cog from the sun gear which is mounted and integrated with the pressure gauge)

Note 2) Position the pressure gauge to the very bottom.

Note 3) Attached to the tip of the pressure gauge is an O-ring with grease applied to it. Please use caution to prevent particles and/or dust from entering the pressure gauge when it is set. Otherwise, they may cause air leakage.

Table 1. Clearance Dimensions

	ARG20 AWG20	ARG30 AWG30	ARG40 AWG40
X dimension (reference value)	2.6 mm	3.3 mm	3.3 mm

#### 6. Setting the clip

Insert the clip in the side of the bonnet when the ▼ mark on the pressure regulator guide and the ▲ mark on the bonnet are aligned. When inserting and setting the clip, use an instrument with a narrow tip, such as tweezers.

Note 1) The clip is slightly tapered towards its tip to prevent it from being released. Set the clip by slightly opening its tip.

Note 2) When the clip cannot easily be set, the cause may be as follows:

- (1) The pressure regulator screw might have been in a lower position than then the current one. (The pressure regulator screw may reach a lower position if the pressing force of the pressure regulator screw is excessively applied. This occurs because there is a clearance between the pressure regulator nut and pressure spring, when the pressure regulator screw is loosened completely.)
- (2) The pressure gauge is not firmly set.  
Countermeasures ..... Refer to 5 "Setting the pressure gauge".

#### 7. Setting the handle

Finished when the handle is set.
