#### **Stroke Selection**

### The relation between the cylinder size and the maximum stroke depending on the mounting style

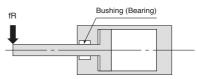

Assuming that the force that is generated by the cylinder itself acts as a buckling force on the piston rod or on the piston rod and the cylinder tube, the table below indicates in centimeters the maximum stroke that can be used, which was obtained through calculation. Therefore, it is possible to find the maximum stroke that can be used with each cylinder size according to the relationship between the level of the operating pressure and the type of cylinder mounting, regardless of the load factor.

Reference: Even under a light load, if the piston rod has been stopped by an external stopper at the extending side of the cylinder, the maximum force generated by the cylinder will act upon the cylinder itself.

### The maximum stroke at which the cylinder can be operated under a lateral load

The region that does not exceed the bold solid line represents the allowable lateral load in relation to the cylinder of a given stroke length. In the graph, the range of the broken line shows that the long stroke limit has been exceeded. In this region, as a rule, operate the cylinder by providing a guide along the direction of movement.

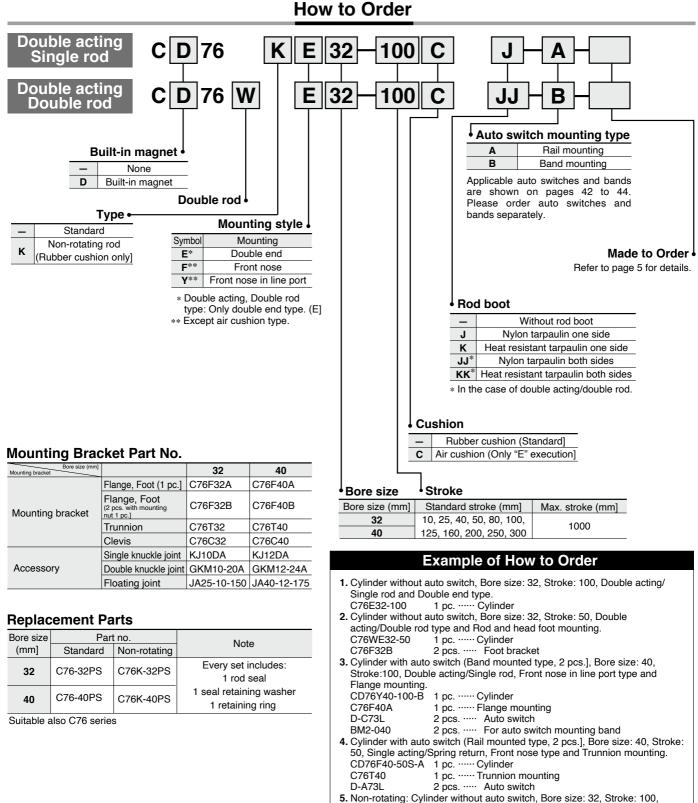

#### **Series C76**: Ø 32, Ø 40

 $\ast$  The data in ( ) are limited by max. stroke length

Auto Switch Mounting Position and Mounting Height

[First angle projection]

Note 2) Figures are used a reference when mounting the auto switches for stroke end detection.

In the case of actually setting the auto switches, adjust them after confirming their operation.

Note 3) The dimensions A and B indicate the distance from the cover to the end face of the auto switch.

\* Lead wire length symbols: 0.5 m ..... Nil (Example) M9N

\* Since there are other applicable auto switches than listed, refer to below. \* For details about auto switches with pre-wire connector, refer to 6-16-60.

\* D-A9□, M9□, M9□WV and D-F9BA switches can not be mounted.

L L L L L н н L I.

5 m ·······Z (Example) M9NZ 3 m ······· L (Example) M9NL

None ..... N (Example) H7CN

\* Solid state switches marked with "O" are manufactured upon receipt of order.

\* D-A , M9 , M9 W, A7 , A80 , F7 , J7 types are shipped together, (but not assembled).

\* D-C7 $\Box\Box$ /C80 $\Box$  and D-H7 $\Box\Box$  switches are set on the cylinder when shipped.

\* D-A79W and D-A9 switches can not be mounted on bore size Ø 8, Ø 10, Ø 12 cylinder.

I Other than the applicable auto switches listed in "How to Order", the following auto I switches can be mounted. For detailed specifications, refer to page 6-16-1 L

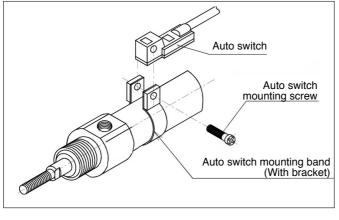

Туре	Model	Electrical entry	Features			
Reed switch	D-C73, C76		_			
Reed Switch	D-C80	Grommet	Without indicator light			
	D-H7A1, H7A2, H7B	(In-line)	-			
Solid state switch	D-H7NW, H7PW, H7BW		Diagnostic indication (2-colour)			

\* Normally closed solid state switch (D-F9G, F9H type) is also available.

#### Mounting Bracket Band mounting type

<Applicable auto switch> D-C7□/C80, D-C73C/C80C, D-H7□, D-H7C, D-H7□W, D-H7BAL, D-H7NF

#### Mounting and Moving Method of Auto Switch

- 1. Put a mounting band on the cylinder tube and position the auto switch.
- Put the mounting part of auto switch in the middle of the stationary fitting, aligning the mounting hole with the hole of the stationary fitting.
- 3. Screw in the auto switch mounting screw through the mounting hole into the threaded part of the band fitting.
- 4. Set the whole body to the detecting position by sliding, then tighten the mounting screw to fix the auto switch (the tightening torque of M3 screw should be about 80 to 100 N/cm).
- 5. Modification of the detecting position should be made following step #3.

#### Auto Switch Mounting Band Part No.

Series	Bore size [mm]						
Selles	32	40					
C76	BM2-032	BM2-040					

#### Mounting and Moving Auto Switches

#### Mounting the Auto Switch

- 1. Attach the switch bracket to the switch holder.
- (Fit the switch bracket over the switch holder.)
- 2. Mount the auto switch mounting band to the cylinder tube.
- 3. Set the switch holder between the reinforcing plates of the band which is already attached to the cylinder.
- Insert the switch mounting screw in the hole of the reinforcing plate through the switch holder, and thread it into the other plate. Tighten the screw temporarily.
- 5. Remove the set screw attached to the auto switch.
- 6. Attach the switch spacer to the auto switch.
- 7. Insert the auto switch with the switch spacer from the back of the switch holder.
  - (Insert the auto switch with an angle of approximately 10 to 15. See figure 1.)
- 8. To secure the auto switch, tighten the switch mounting screw with the specified torque (0.8 N•m to 1.0 N•m).

#### **Adjusting the Switch Position**

- 1. Unloosen the switch mounting screw 3 turns to adjust the switch set position.
- 2. Tighten the screw as described above (8) after adjustment.

#### **Dismounting Auto Switch**

- 1. Remove the switch mounting screw from the switch holder.
- 2. Move the switch back towards the position where it stops at the lead wire side.
- 3. Hold up the lead wire side of the switch at the angle of around 45.
- 4. Maintain the angle, and pull back the switch obliquely at the same angle.

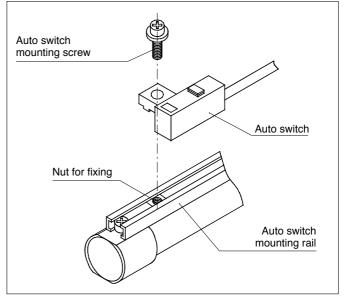

SMC

#### Mounting Bracket Rail mounting type

#### <Applicable auto switch>

D-A7 A80, D-A73C/A80C, D-F7 /J7 , D-J79C, D-F7 W, D-J79W, D-F7BAL, D-F7 WV, D-F7BAVL, D-F79F

#### Mounting and Moving Method of Auto Switch

- 1. Slide the nut located inside the mounting rail and set it at the auto switch mounting position.
- Fit the convex part of the auto switch mounting arm into the slot of the rail and slide it to the nut position.
- Allow the auto switch mounting screw to match gently in the nut for attachment, and screw it in.
- Check the detecting position again and tighten the mounting screw to fix the auto switch definitely (the tightening torque of M3 screw should be about 50 to 70 N/cm).
- 5. Modification of the detecting position should be made following step #3.

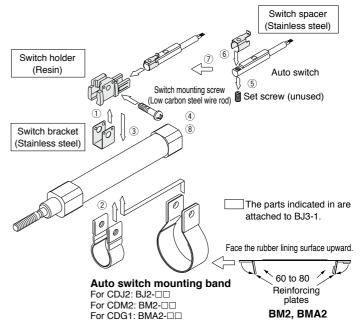

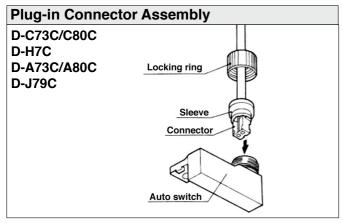

Figure 1. Switch insert angle

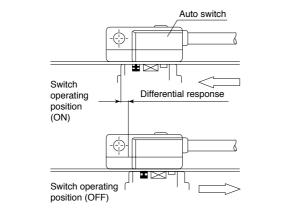

With the convex port of the connector highest, insert the connector into the auto switch up to the sleeve. Screw the locking ring into the switch (do not tighten with pliers, hand tishten only).

#### Lead Wire with Connector

Part no.	Length
D-LC05	0.5 m
D-LC30	3 m
D-LC50	5 m
D-LC□□-61	Flexible cable

#### Differential Response of Auto Switch

The distance from the operating position of auto switch to the returning position is called the differential response. This response is included in part of the operating range (one side).

The difference between the operating position (ON) of switch and the returning position (OFF) is 2 mm or less in a reed switch and 1 mm or less in a solid state switch.

#### Operating Range of Auto Switch [mm]

Mounting	Model	Bo	ore
wounting	Woder	32	40
	D-A9□	6	6
	D-M9□	2.5	2.5
<b>D</b> 1	D-M9□W	4	3.5
Band	D-C7□/C80/C73C/C80C	8	8
	D-H7□/H7□W/H7BAL	4.5	5
	D-H7C	9	10
	D-A7□/A80/A7□H/A80	8	8
	D-A73C/A80C	0	0
Bail	D-A79W	13	14
nali	D-F7□/J79/F7□W/J79W		
	D-F7 V/F7 WV/F79F	6	6.5
	D-J79C/F7BA		

Note) The operating range is a guide including hysteresis, but is not guaranteed. There may be varied substantially depending on the surrounding environment (assuming approximately 30 % dispersion).

#### Contact Protective Box/CD-P11, CD-P12

The auto switch of D-A7/A8 type, D-A7 $\Box$ H/A80H type, D-A73C/A80C type, D-C7/C8 type, D-C73C/C80C type are not incorporated with a contact protective circuit.

- 1. Operating load is inductive.
- 2. The wiring length to load is 5 m or less.
- 3. The load voltages are 100 or 200 VAC. Either voltage should be used with the contact protective box.

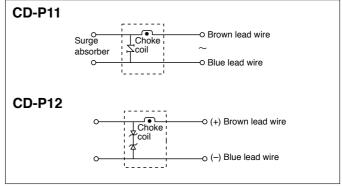

#### **Contact Protective Box of Specifications**

Part no.	CD-	CD-P12	
Load voltage	100 VAC	200 VAC	24 VDC
Max. load current	25 mA	12.5 mA	50 mA
Lead wire lengh	Switch connecting	side 0.5 m	

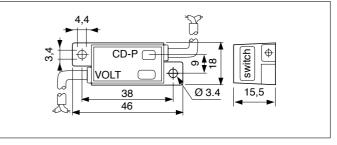

Load connecting side 0.5 m

#### **Contact Protective Box/Internal Circuit**

#### **Contact Protective Box/Dimensions**

#### **Contact Protective Box/Dimensions**

For connection of the switch body and the contact protective box, connect the load in the side indicated and switch on the contact protective box to the lead from the switch body. The length of lead between the switch body and the contact protective box should be within 1 m and they should be set as close together as possible.

		▲ Warning		▲ Caution	

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications. Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

#### 2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
  - 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
  - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
  - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- Our products cannot be used beyond their specifications. Our products are not developed, designed, and manufactured to be used under the following conditions or environments. Use under such conditions or environments is not covered.
  - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
  - 2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, fuel equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogues and operation manuals.
  - 3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

We develop, design, and manufacture our products to be used for automatic control equipment, and provide them for peaceful use in manufacturing industries. Use in non-manufacturing industries is not covered.

Products we manufacture and sell cannot be used for the purpose of transactions or certification specified in the Measurement Act.

The new Measurement Act prohibits use of any unit other than SI units in Japan.

#### Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".Read and accept them before using the product.

#### Limited warranty and Disclaimer

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.<sup>2)</sup> Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

#### **Compliance Requirements**

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.
