Pin Cylinders

Series CJP2/CJP

2 auto switches can even be mounted on a cylinder with Ø4 bore size (5 mm stroke).

One-touch fitting can be connected.

(Panel mount type)

ø2 One-touch fitting, miniature fitting, and speed controller can be connected.

Small and Light

Double acting/Series CJP2

- Full length: Shortened by 6 to 9.5 mm
- Weight: Reduced by 55 to 65%

New aluminum body is light weight compared with the conventional CJP series.

(Compared with the basic model CJP cylinder without auto switch)

^{* ():} Dimension for built-in magnet type

Moisture **Control Tube** Series IDK

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to Series IDK in the WEB catalog

Specifications

Action		Double acting, Single rod		
Maximum opera	ating pressure	0.7 MPa		
Minimum	ø 4	0.15 MPa		
operating	ø 6	0.12 MPa		
pressure	ø10, ø16	0.06 MPa		
Proof pressure		1 MPa		
Ambient and fluid temperature		Without auto switch: -10 to 70°C With auto switch: -10 to 60°C (No freezing)		
Lubrication		Not required (Non-lube)		
Stroke length to	olerance	+1.0 0		
Rod end style		With thread/Without thread		
Piston speed		10 to 500 mm/s*		
Cushion		Rubber bumper		
Mounting Note)		Basic, Flange, Foot, Clevis, Trunnion		

Note) Bore size of ø4 is available with basic mounting only. The piston speed for a bore size of ø4 is 50 to 500 mm/s.

Allowable Kinetic Energy

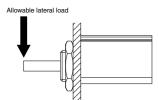

When driving an inertial load, operate a cylinder with kinetic energy within the allowable value. The range in the chart below that is delineated by bold solid lines indicates the relation between load mass and maximum driving speeds.

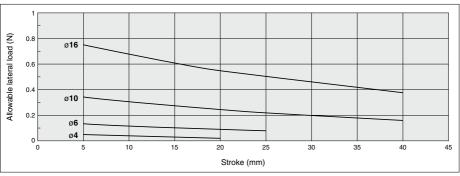

Bore size (mm)	4 6 10 16								
Piston speed (m/s)	0.05 to 0.5								
Allowable kinetic energy (J)	0.75 x 10 ⁻²	1.2 x 10 ⁻²	2.5 x 10 ⁻²	5.0 x 10 ⁻²					

Allowable Lateral Load

Strictly observe the limiting range of lateral load on a piston rod. (Refer to the below graph.) If this product is used beyond the limits, it may shorten the machine life or cause damage.

No. of auto switches mounted	D-M9□, D-M9□V	D-M9□W, D-M9□WV D-M9□A, D-M9□A(V) D-A9□, D-A9□V				
1	5	5				
2	5	10				

Mounting and Moving Auto Switches

- ① Fit an auto switch into the auto switch mounting groove to set it roughly to the mounting position for an auto switch.
- ② After reconfirming the detecting position, tighten the auto switch mounting screw* to secure the auto switch.
- 3 Modification of the detecting position should be made in the condition of 1).
- When tightening an auto switch mounting screw, use a watchmaker's screwdriver with a handle of approximately 5 to 6 mm in diameter.
 (Use a tightening torque of approximately 0.10 to 0.20 N·m.)

Tightening torque for auto switch

▲ Specific Product Precautions

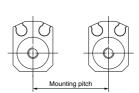

Before handling auto switches, refer to pages 8 to 12 for Auto Switches Precautions

⚠ Caution

 If auto switch cylinders are used in parallel, keep the distance between cylinders in accordance with the below chart.

Mounting Pitch				(mm)		
A t	Bore size					
Auto switch model	4	6	10	16		
D-A9□(V)	_	20	25	30		
D-M9□(V) D-M9□W(V)	25	25	30	35		

Use caution not to use them, getting closer than the specified pitch. Otherwise, it may cause auto switch to malfunction.

Series CJP2 Made to Order: Individual Specifications Please contact SMC for detailed dimensions, specifications and lead times.

1 Clevis / Trunnion Style Mounting Interchangeable

Symbol -X1666

CJP2 series standard model no.

- X1666

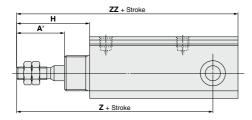

Clevis / Trunnion style mounting interchangeable (Former CJP)

Specifications

Applicable series	CJP2
Bore size	ø6, ø10, ø16
Other specifications	Same as standard type.

- * ø6 is available for both standard and built-in magnet types.
- * Ø10 and Ø16 are available for the standard type (The built-in magnet type is interchangeable.)

Dimensions

Series CJP2 Specific Product Precautions

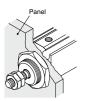

Be sure to read before handling. Please consult with SMC for the use other than the specifications.

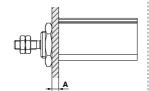

Mounting

Mounting nut maximum tightening torque and panel width

① Do not apply more torque than the maximum torque range when mounting the cylinder or bracket. Also, do not attach a panel with a thickness beyond the specified range.

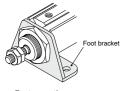

Cylinder bore size	Thread	Maximum tightening torque (N·m)	A dimension maximum value (mm)
ø 4	M8 x 1	6.2	3
ø 6	M10 x 1	12.5	4
ø 10	M12 x 1	21.0	4
ø 16	M14 x 1	34.0	5

Panel mounting

Panel maximum thickness

Foot mounting

Flange mounting

Piping

∧ Caution

The piping port size of CJ2 \square 6 and CJP2 \square 10 is M3 x 0.5. If using piping tube O.D. Ø6, piping is possible on M3 One-touch fittings (applicable tube O.D. Ø4) when used with a reducer (ex. KQ2R04-06 <plug-in type>, KQ2L04-06 <plug-in elbow type>).

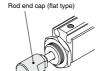

* For details of One-touch fittings, refer to Best Pneumatics No. 6.

② Do not apply more tightening torque than the below specified range when attaching a load on the rod end, rod end cap, single or double knuckle joint.

Applicable bore size	Thread size	Maximum tightening torque (N·m)
ø4	M2 x 0.4	0.1
ø 6	M3 x 0.5	0.3
ø10	M4 x 0.7	0.8
ø16	M5 x 0.8	1.6

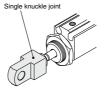

Rod end load mounting

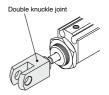

Rod end cap (flat type) mounting

Rod end cap (round type) mounting

Single knuckle joint mounting

Double knuckle joint mounting

Disassembly and Maintenance

↑ Caution

Snap ring installation / removal

- To replace seals or grease the cylinder during maintenance, use an appropriate pair of pliers (tool for installing a C-type retaining ring for hole).
 - After re-installing the cylinder, make sure that the retaining ring is placed securely in the groove before supplying air.
- 2. To remove and install the retaining ring for the knuckle pin or the trunnion pin, use an appropriate pair of pliers (tool for installing a C-type retaining ring for hole). In particular, use a pair of ultra-mini pliers, for removing and installing the retaining rings on the ø6 cylinder.

Do not disassemble the CJP4 cylinder. Do not loosen or remove the head cover.

Pin Cylinder: Single Acting, Spring Return

Series CJP

Ø4, Ø6, Ø10, Ø15

A short stroke miniature cylinder with a shorter overall length.

The installation space can be significantly reduced because this cylinder can be recessed directly into a machine body or installed on a panel. Thus, the machine can be made more compact.

Symbol

Single acting, Spring return

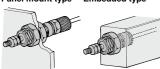

Made to Order (Ø6 to Ø15) (For details, refer to pages 1699 to 1818.)

Symbol	Specifications
XC17	Pin cylinder with rod quenched
XC22	Fluororubber seals

Mounting

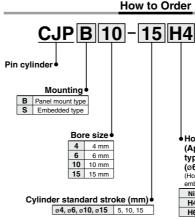

Panel mount type Embedded type

Moisture Control Tube Series IDK

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to Series IDK in the WEB catalog

Allowable Kinetic Energy

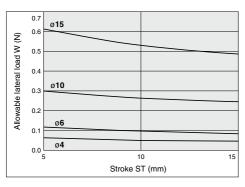

When driving an inertial load, operate a cylinder with kinetic energy within the allowable value. The range in the chart below that is delineated by bold solid lines indicates the relation between load mass and maximum driving speeds.

Bore size (mm)	4	6	10	15
Piston speed (m/s)		0.05	to 0.5	
Allowable kinetic energy (J)	0.5 x 10 ⁻³	3 x 10 ⁻³	8 x 10 ⁻³	19 x 10 ⁻³

Allowable Lateral Load

Strictly observe the limiting range of lateral load on a piston rod. (Refer to the below graph.) If this product is used beyond the limits, it may shorten the machine life or cause damage.

Series CJP Specific Product Precautions

Be sure to read before handling. Please consult with SMC for the use other than the specifications.

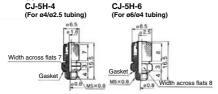

Piping

The following fittings are recommended for this cylinder connection. However, there may be a case where the piston speed exceeds 500 mm/sec. even with the recommended fittings for this cylinder. Use a speed controller in such cases.

Cylinder bore size	Applicable bore size	Fitting type	Connection thread	Model
ø4		One-touch fitting	M3 x 0.5	KJ□02-M3
94	ø2	Miniature fitting	IVI3 X U.5	M-3AU-2
		One-touch fitting		KJ□02-M5
ø6 ø10		Miniature fitting	M5 x 0.8	M-5AU-2
Ø10 Ø15	ø4/2.5	Dedicated hose nipple	IVIS X U.6	CJ-5H-4
2.0	ø6/4	(with fixed orifice)		CJ-5H-6

Please be aware that cylinder speed may slow down on the retracting side when using the above one-touch fittings and miniature fittings with a cylinder bore size of a15.

Hose nipple

In addition to the above fittings and hose nipples, the below fittings can also be attached to the cylinder. When using the below fittings be sure to provide a speed controller after adjusting it to 500 mm/s or less.

Cylinder bore size	Applicable bore size	Fitting type	Connection thread	Model
ø4	3.2		M3 x 0.5	KJ□23-M3
94	4		IVI3 X U.5	KJ□04-M3
ø6	3.2	One-touch fitting		KJ□23-M5
ø10	4		intuing	M5 x 0.8
ø15	6			KJ□06-M5

Recommended Speed Controller

Applicable bore size (mm)	Connection thread	Elbow type meter-in	Universal type meter-in	In-line type meter-in						
ø2	МЗ	AS1211F-M3-02	_	AS1001F-02

ø4	М3	AS1211F-M3-04	AS1311F-M3-04	AS1001F-04						
94	M5	AS1211F-M5-04	AS1311F-M5-04	AS1001F-04						
ø6	M5	AS1211F-M5-06	AS1311F-M5-06	AS1001F-06						

For details about one-touch fittings, miniature fittings and speed controllers (applicable tubing O.D. ø2 only), refer to the catalog ESS0-25 (B edition or later).
Also, for details about speed controllers (applicable tubing O.D. ø3.2 to ø6), refer to Best Pneumatics No. 6.

Mounting

Do not use it in such a way that a load could be applied to the piston rod during the retraction.

The spring that is built into the cylinder provides only enough force to retract the piston rod. Thus, if a load is applied, the piston rod may not be able to retract to the end of the stroke.
