With built-in OFF-delay timer ( 200 ms )

Possible to use in an environment where disturbance magnetic fields are generated.

$\qquad$ Rail $\square$ Grommet $\longrightarrow$ D-P5DWL
-6-82

With Prewiered Connector M8, M12

## Prior to Use <br> Auto Switch Specifications

## Precautions

## Auto Switch Common Specifications

| Auto switch style | Reed switch | Solid state switch |
| :---: | :---: | :---: |
| Current leakage | None | 3 wire: $100 \mu \mathrm{~A}$ or less, 2 wire: 1 mA or less |
| Operating time | 1.2 ms | $1 \mathrm{~ms} \mathrm{or} \mathrm{less}{ }^{(3)}$ |
| Shock resistance | $300 \mathrm{~m} / \mathrm{s}^{2}$ | $1000 \mathrm{~m} / \mathrm{s}^{2}$ |
| Insulation resistance | $50 \mathrm{M} \Omega$ or more at 500 MV DC (between lead wire and the case) |  |
| Withstand voltage | 1500 V AC/min. (between lead wire and the case) ${ }^{(1)}$ | 1000 V AC/min. <br> (between lead wire and the case) |
| Ambient temperature | -10 to $60^{\circ} \mathrm{C}$ |  |
| Protective construction | IEC529 Standard IP67, <br> Waterproof construction (JISC0920) ${ }^{(2)}$ |  |

Note 1) Connector style (D-A73C/A80C/C73C/C80C) and D-9/9 $\square \mathrm{A} / \mathrm{A} 9 / \mathrm{A} 9 \square \mathrm{~V}$ style: 1000 V AC/min. (between lead wire and the case)
Note 2) IEC529 Standard IP63, Rainproof construction (JISC0920) for Terminal conduit style (D-A3/A3 $\square$ A/A3 $\square \mathrm{C} / \mathrm{G} 39 / \mathrm{G} 39 \mathrm{~A} / \mathrm{G} 39 \mathrm{C} / \mathrm{K} 39 / \mathrm{K} 39 \mathrm{~A} / \mathrm{K} 39 \mathrm{C}$ ) and DIN teminal style (D-A44/A44A/A44C).
Note 3) Except solid state switch with timer (D-M5 $\square$ TL, G5NTL, F7NTL, F5NTL) and Auto switch for strong magnetic field resistance (D-P5DWL). D-J51: 5ms or less

## Lead Wire Length

## How to Order

Ex.)

Note 1) Applicable auto switch with 5 meter lead wire ("Z")
Reed switch: D-B53/B54, D-C73 (C)/C80C,D-A73(C)(H)/A80C
D-A53/A54, D-Z73, D-90/97/90A/93A

Solid state switch: Manufactured upon receipt of order as standard (Except D-M9/M9■V)
Note 2) The standard lead wire length of solid state switch with timer or with water resistant 2 colour indication is 3 meters. (Not available 0.5 m )
Note 3) The standard lead wire length of strong magnetic field resistant solid state switch is 3 or 5 meters. (Not available 0.5 m .)

## Change of Lead Wire Colour

Lead wire colours of SMC auto switches have been changed in order to meet Nippon Electric Control Equipment Industries Association Standard No. 402.

| 2 wire auto switch |  |  | 3 wire auto switch |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Old | New |  | Old | New |
| Output (+) | Red | Brown | Power supply | Red | Brown |
| Output (-) | Black | Blue | GND | Black | Blue |
|  |  |  | Output | White | Black |
| Solid state auto switch with diagnostic output |  |  | Solid state auto switch with latching style diagnostic output |  |  |
|  | Old | New |  | Old | New |
| Power supply | Red | Brown | Power supply | Red | Brown |
| GND | Black | Blue | GND | Black | Blue |
| Output | White | Black | Output | White | Black |
| Diagnositc output | Yellow | Orange | Latching style diagnostic outout | Yellow | Orange |

Part No. of lead wire with connector
(Available for connector style only.)

| Part No. | Lead wire length |
| :---: | :---: |
| D-LC05 | 0.5 m |
| D-LC30 | 3 m |
| D-LC50 | 5 m |

## Prior to Use

Auto Switch Hysteresis/Contact Protection Box

## Contact Protection Box/CD-P11, CD-P12

## 1

The following auto switches are not incorporated with the contact protection box.
D-A7/A8, D-A7ロH/A80H, D-A73C, A80C, D-C7/C8,
D-C73C/C80C, D-E7ロA, E80A, D-Z7/Z8, D-9/9■A, D-A9/A9■V, and D-A79W type
Use an auto switch with a contact protection box in any case listed below. Unless using a contact protection box, the contact life may be shortened.
(Due to permanent energizing conditions.)
D-A72(H) must be used with the contact protection box regardless of load styles and lead wire length.
(1)Operating load is an inductive load.
(2)The wiring length to load is more than 5 m .
(3) The load voltage is $\mathbf{1 0 0}$ or $\mathbf{2 0 0} \mathrm{V} \mathrm{AC}$.
(2)

Contact SMC when using built-in contact protection circuit style (D-A34[A] [C], D-A44[A] [C], D-A54/A64, D-B54/B64, D-A59W, D-B59W) in the following conditions:
(1) The wiring length to load is more than 30 m .
(2) When using PLC with large flow current

Contact Protection Box/Specifications

| Part No. | CD-P11 |  | CD-P12 |
| :---: | :---: | :---: | :---: |
| Load voltage | 100 V AC max. | 200 V AC | 24 V DC |
| Max. load current | 25 mA | 12.5 mA | 50 mA |

Lead wire length - Switch connecting side 0.5 m Load connecting side 0.5 m

## Auto Switch Hysteresis

The distance between the turn-on point (ON) of the switch by moving of the piston to the turn-off point (OFF) is called "Hysteresis". This hysteresis is included as part of the operating range (one side).

## Contact Protection Box/Internal Circuit <br> ( ): If applicable for IEC Standard

CD-P11

CD-P12

## Contact Protection Box/Dimensions

## Contact Protection Box/Connection Method

For connection of the switch body and the contact protection box, connect the lead wire in the side indicated as "SWITCH" on the contact protection box to the lead wire from the switch body. The length of lead wire between the switch body and the contact protection box should be within 1 m and they should be set as close together as possible.

## Prior to Use <br> Auto Switch Connection Method/Connection Example

## Basic Wiring

## - Solid state switch

(When power source for switch and load is not common.)

- Reed switch 2 wire

Typical PLC (Programmable Logic Controller) Connection Circuits

## AND (Serial), OR (Parallel) Connection Examples

- 3 wire

NPN/AND connection (with relay)

- 2 wire (2 pcs.)

AND connection

When 2 switches are connected by AND, load voltage will decrease at ON and these connections may cause malfunction of load. Indication lights up when both switches are ON.

Load voltage at $\mathrm{ON}=$ Supply voltage-Internal drop voltage X 2 pcs. $=24 \mathrm{~V}-4 \mathrm{~V}$ X 2 pcs. $=16 \mathrm{~V}$

Example) Supply voltage 24V DC, switch internal drop voltage 4V

NPN/AND connection (with switch)

Indication lights up when both switches are ON .

NPN/OR connection

OR connection

When 2 switches are connected by OR, load voltage will increase at OFF and these connections may cause malfunction.
[Reed switch]
There is no current leakage so that load voltage does not increase at OFF.
The flowing current is broken up into the ON-state switches, so indicator light becomes dark or may not turn ON due to the lack of the current.
Load voltage at OFF=Leakage current X 2 pcs. X Load impedance
$=1 \mathrm{~mA} \times 2 \mathrm{pcs}$. $\times 3 \mathrm{k}$
$=6 \mathrm{~V}$
Example) Load impedance 3k, switch leakage current 1 mA

## Reed Switch

2 colour Indication Style

# Reed Switch/Band Mounting <br> D-C73/D-C76/D-C80 

## Grommet

## Internal Circuit

( ): If not applicable for IEC Standard

D-C80

Note) (1) In the case operation load is an inductive load. (2) In the case the wiring length to load is more than 5 m .
(3) In the case the load voltage is 100 V AC.

Be sure to use the auto switch with the contact protection box in any case mentioned above. Refer to p.6-19 for the details of contact protection box

## 2 Colour Indication Style Reed Switch/Rail Mounting D-A79W

## Grommet

The suitable operating point can be indicated with a green light. (Red Green Red)

## Internal Circuit

( ): If not applicable for IEC Standard

Note) (1)In the case operation load is an inductive load.
(2) In the case the wiring length to load is more than 5 m . Be sure to use the auto switch with the contact protection box in any case mentioned above. Refer to the p.6-19 for the details of contact protection box.

Applicable Actuator Series

## Diagnostic Output Operation

The diagnostic signal is output when detecting position remains within unsteady area (where indicator light is Red.) for mor than 0.5 sec . This signal keeps outputting even after normal output goes to OFF. The diagnostic output becomes OFF when detecting position remains within the most suitable operating range (where indicator light is Green.) for more than 0.5 sec .

| MDB | $\varnothing 32, \varnothing 40, \varnothing 50, \varnothing 63, \varnothing 80, \varnothing 100$ |

Specifications
PLC: Programmable Logic Controller

| D-F59F |  |
| :--- | :---: |
| Auto switch model number | D-F59F |
| Wiring | 4 wire |
| Output | NPN |
| Diagnostic output | Normal operation |
| Application | IC circuit/Relay/PLC |
| Power voltage | $5 / 12 / 24 \mathrm{~V}$ DC (4.5 to 28V DC) |
| Current consumption | $\leq 10 \mathrm{~mA}$ |
| Load voltage | $\leq 28 \mathrm{~V} \mathrm{DC}$ |
| Load current | $\leq 40 \mathrm{~mA}$ |
| Internal voltage drop | $\leq 1.5 \mathrm{~V}(\leq 0.8 \mathrm{~V}$ at 10mA) |
| Current leakage | $\leq 100 \mathrm{~A}$ at 24 V DC |
| Indicator light | Operating point: Red light emitting diode <br> Suitable operating point: Green light emitting diode |

-Lead wire -—Oilproof vinyl heavy insulation cable, $\varnothing 4,0.2 \mathrm{~mm}^{2}, 4$ cores (Brown, Black, Orange, Blue), 0.5 m Note 1) Refer to common specifications on p.6-18.
Note 2) Refer to p.6-18 for lead wire length.

## Diagnostic Output Operation

The diagnostic output is detected when detecting position remains at unsteady area only, not available at the most suitable operating area, that is to say, diagnostic signal can be output only when the detecting position is far from the suitable position for normal operation.

Operation Range ( e Dimension)

# Solid State Switch with Timer/Band Mounting D-G5NTL 

## Grommet

With built-in OFF-delay timer (200ms)

## Internal Circuit

( ): If not applicable for IEC Standard

## Timer Operation

Detection of immediate positioning for high-speed cylinder
Detecting point dispersion occurs due to response time of PLC (sequencer); e. g. scanning.
Ex.)Cylinder speed $-1000 \mathrm{~mm} / \mathrm{sec}$.
Sequencer response time -0.1 sec .
Detecting point despersion - Within
100 mm ( $=1000 \mathrm{~mm} / \mathrm{sec} . \mathrm{X} 0.1 \mathrm{sec}$.)
Take PLC response time into consideration when using.

-Lead wire - Oilproof vinyl heavy insulation cable, $\varnothing 4,0.3 \mathrm{~mm}^{2}, 3$ cores (Brown, Black, Blue), 3m (Standard)
Note 1) Refer to common specifications on p.6-18.
Note 2) Refer to p.6-18 for lead wire length.

## Timer Operation

Detection of immediate positioning for high-speed cylinder
Detecting point dispersion occurs due to response time of PLC (sequencer);
e. g. scanning.

Ex.) Cylinder speed- $1000 \mathrm{~mm} / \mathrm{sec}$.
Sequencer response time- 0.1 sec .
Detecting point despersion-Within
100 mm ( $=1000 \mathrm{~mm} / \mathrm{sec}$. X 0.1 sec .)
Take PLC response time into consideration when using.

| CDS1 | $\varnothing 40, \varnothing 50, \varnothing 63, \varnothing 80, \varnothing 100$ |
| CE2 | $\varnothing 32, \varnothing 40, \varnothing 63, \varnothing 80, \varnothing 100$ |
| MDB |  |

Specifications
PLC: Programmable Logic Controller
D-F5LF (With indicator light)

| Auto switch model number | D-F5LF |
| :--- | :---: |
| Wiring | 4 wire |
| Output | NPN |
| Diagnostic output | Latching operation |
| Application | $24 \mathrm{~V} \mathrm{DC} \mathrm{Relay/PLC}$ |
| Power voltage | $24 \mathrm{~V} \mathrm{DC} \mathrm{(10} \mathrm{to} \mathrm{26V} \mathrm{DC)}$ |
| Current consumption | 20 mA |
| Load voltage | $\leq 26 \mathrm{~V} \mathrm{DC}$ |
| Load current | $\leq 40 \mathrm{~mA}$ |
| Internal voltage drop | $\leq 0.8 \mathrm{~V}$ |
| Current leakage | $\leq 100 \mathrm{~A}$ at 24V DC |
| Indicator light | Operating point: Red light emitting diode <br> Suitable operating point: Green light emitting diode <br> Orange colour indicator lights on when diagnostic output is ON |

-Lead wire-Oilproof vinyl heavy insulation cable, $\varnothing 4,0.2 \mathrm{~mm}^{2}, 4$ cores (Brown, Black, Orange, Blue), 0.5 m Note 1) Refer to common specifications on p.6-18. Note 2) Refer to p.6-18 for lead wire length.

## Diagnostic Output Operation (Latching Style)

The diagnostic signal is output when detecting position remains within unsteady area (where indicator light is Red.) for more than 0.5 sec . This signal keeps outputting even after normal output goes to OFF. The diagnostic output becomes OFF when detecting position remains within the most suitable operating range (where indicator light is Green.) for more than 0.5 sec .

## Internal Circuit

( ): If not applicable for IEC Standard

# 2 Colour Indication Style Solid State Switch/Direct Mounting $D-M 9 N W(V) / D-M 9 P W(V) / D-M 9 B W(V)$ 

Auto Switch Specifications

## Grommet

- 2-wire load current is reduced (2.5 to 40 mA ).
- Use of lead wire compliant with UL standards (style 2844)
- 1.5 times the flexibility compared with conventional products (comparison with other SMC products)
- Using fl exible cable as standard spec.
- The proper operating range can be determined by the colour of the light. (Red $\rightarrow$ Green $\rightarrow$ Red)

# Information 1 <br> Plug-in Connector Assembly/How to Use DIN Terminal 

## Plug-in Connector Assembly <br> D-A73C, D-A80C, D-J79C <br> D-C73C, D-C80C, D-H7C

With the convex port of the connector, insert the connector into the auto switch into the sleeve. Screw the locking ring onto the switch. (Do not tighten with pliers.)

## How to Use DIN Terminal/D-A44/A44A/

A44C
(1)Loosen the set screw and pull out the connector from the pin plug. (2) Be sure to remove the set screw first and then insert a screw driver into a recessed groove under the terminal block to separate the terminal cover from the terminal block.
(3)Follow the procedures and connect wires securely to specified terminals.
(4) In standard cases, crimp-style terminals are used to connect wires. Please select proper crimp-style terminals so that the wire can be properly connected to terminal fittings.

Method of connection

AC: Connect to terminal No. 1 and No. 2
DC: Connect (+) to No. 1 terminal and (-) to No. 2 terminal.

How to change position of electrical entry
After separating the terminal block from the terminal cover, change the position of the terminal cover to any desired direction (4 directions at every $90^{\circ}$ ) to change the position of electrical entry.

## Caution

When taking in or out the connector pin to or from the pin plug, hold the connector as perpendicular as possible.
Applicable cable (heavy insulation cable)
Applicable to cable O. D. of $\varnothing 6.8$ to $\varnothing 11.5$.
Applicable crimp-style terminal
$1.25 \mathrm{Y}-3 \mathrm{~L}, 1.25-3.5 \mathrm{~S}, 1.25-4 \mathrm{M}$

## Information (2

How to Mount and Move the Auto Switch

## Mounting Bracket Band mounting

## $\triangle \triangle$ Caution

(1)Tighten the screw under the specified torque when mounting auto switch.
(2) Set the mounting band perpendicularly to cylinder tube.

Correct mounting

Wrong mounting

## <Applicable auto switch>

Reed switch $\qquad$ D-B53, D-B54, D-B64
D-B59W
Solid state switch
D-G59, D-G5P, D-K59, D-G5BAL D-G59W, D-G5PW, D-K59W
D-G59F
D-G5NTL

How to mount and move the auto switch

(1)Put a mounting band on the cylinder tube and set it at the auto switch mounting position.
(2)Put the mounting section of the auto switch between the band mounting holes, then adjust the position of mounting holes of switch to those of mounting band.
(3)Lightly thread the auto switch mounting screw through the mounting hole into the thread part of band fitting.
(4)After setting the whole body to the detecting position by sliding, tighten the mounting screw to secure the auto switch. (The tightening torque of M4 screw should be about 1 to 1.2 Nm .)
5Modification of the detection position should be made in the condition of (3).
Part No. of auto switch mounting bracket (including band and screw)

[^13]:    Mounting screw set (Stainless steel specification)
    Use the following mounting screw set (Set screw included.) according to the required operating conditions. (Mounting band is not included.)

    BBA3: For D-B5/B6/G5/K5
    D-G5BAL is mounted on the cylinder with the above stainless steel screw BBA3 before shipment or BBA3 is enclosed with D-G5BAL when shipped without cylinder.

[^14]:    Mounting screw set (Stainless steel specification)

[^15]:    (1)Insert the auto switch into the mounting groove and set it at the auto switch mounting position.
    (2)After confirming the detecting position, tighten the mounting screw to secure the auto switch.
