Diaphragm Valve for Ultra High Purity

Air operated type
(For high pressure and high flow)

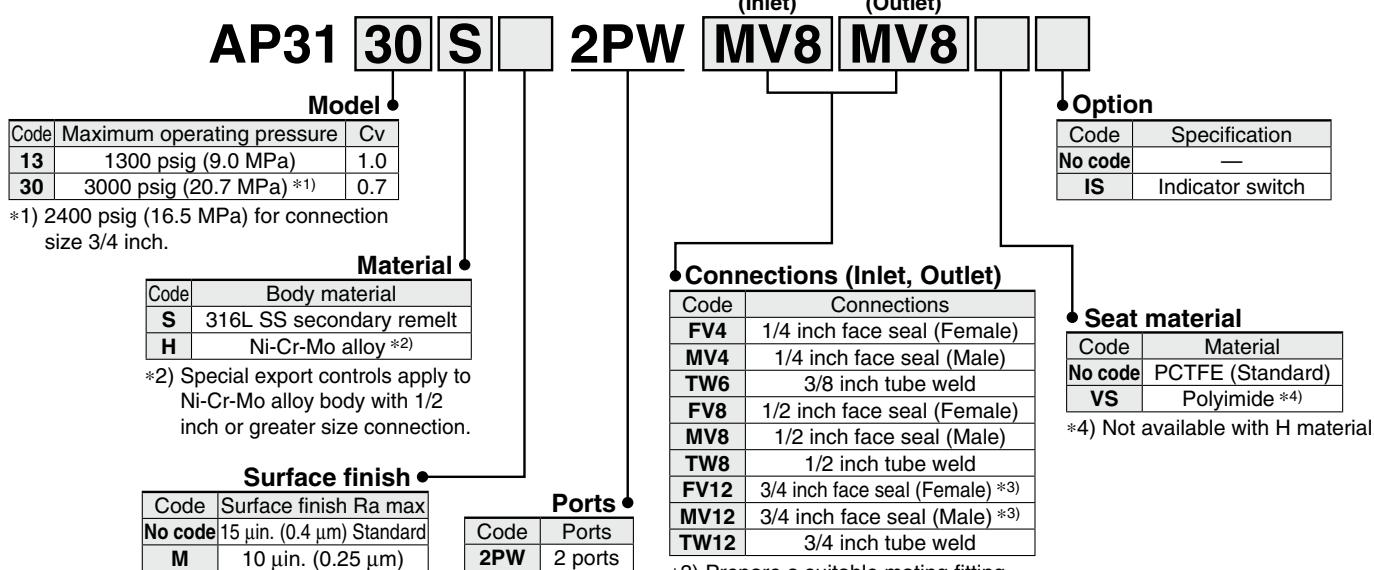

AP3130 & 3113 Series

- Suitable for UHP gas supply line
- Body material: 316L SS secondary remelt
- Pneumatically actuated normally closed
- High pressure type: 20.7 MPa and 9 MPa
- Designed for bulk specialty gas (BSGS) delivery
- LOTO option available as an option

RoHS

How to Order (See p. 250 for ordering syntax)

Specifications

Operating Parameters		AP3113	AP3130
Status		Normally closed (N.C.)	
Gas		Select compatible materials of construction for the gas	
Operating pressure		Vacuum to 1300 psig (9.0 MPa)	Vacuum to 3000 psig (20.7 MPa)
Proof pressure		1.5 times the maximum operating pressure	
Burst pressure		3 times the maximum operating pressure	
Ambient and operating temperature		-10 to 65°C (No freezing) *1)	
Cv *2)		1.0	0.7
Leak rate	Inboard leakage	2 x 10 ⁻¹¹ Pa·m ³ /s	
	Outboard leakage	2 x 10 ⁻¹⁰ Pa·m ³ /s *3)	
Across the seat leak		1 x 10 ⁻¹⁰ Pa·m ³ /s	
Surface finish		Ra max 15 µin. (0.4 µm)	Option: 10 µin. (0.25 µm)
Connections		Face seal, Tube weld	
Actuation pressure		70 to 110 psig (0.48 to 0.76 MPa)	
Actuation port connection		NPT 1/8 inch	
Actuation port location		Top	
Installation		Bottom mount	
Internal volume		0.36 in ³ (6.0 cm ³) for body	
Weight		1.27 kg *4)	
LOTO (Lockout)		Option (Part number: AP PL 210) *5)	

*1) Max. 90°C for Polyimide seat.

*2) Figure of 1/2 inch connection.

*3) Tested with Helium gas inlet pressure 500 psig (3.5 MPa).

Port Specifications

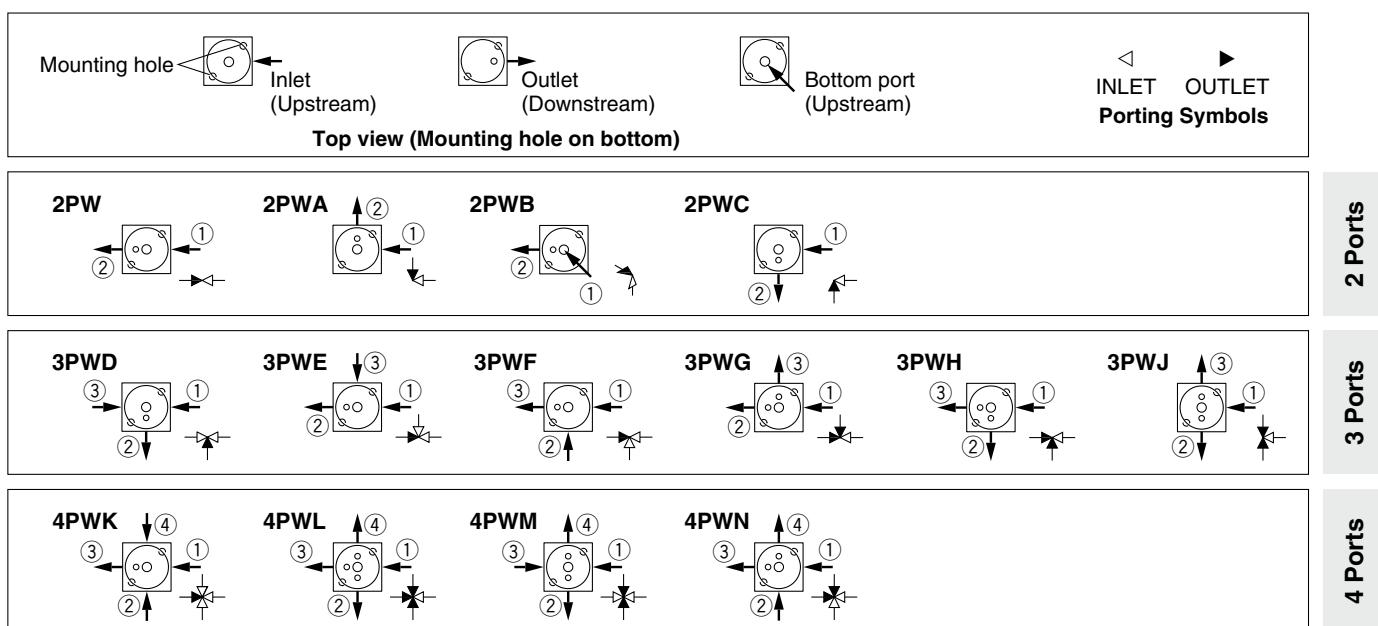

Valves are illustrated top view looking down through the valve.

The traditional flow direction is INLET to OUTLET, but AP Tech valves may be employed in either flow direction.

Port locations are indicated by numbers.

INLET (Upstream) is defined as a port connected to the region below the valve seat. It is illustrated with an arrow pointing towards the valve body or an "empty" triangle on the schematic.

OUTLET (Downstream) is defined as a port connected to the region above the seat and below the diaphragm. It is illustrated with an arrow pointing away from the valve body or a "filled" triangle on the schematic.

Diaphragm Valve for Ultra High Purity

Air operated type

AZ4500 Series

- Suitable for UHP gas supply line
- Body material: 316L SS
- Pneumatically actuated normally closed or normally open
- Indicator switch available as an option (AZ4550/4580)

RoHS

How to Order (See p. 250 for ordering syntax)

*) Optional porting and porting configurations available.

Refer to the AZ series optional porting configuration on page 207.

The optional porting configuration can be selected when the

welded type (PW) is selected.

Port Specifications

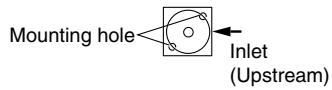

Valves are illustrated top view looking down through the valve.

The traditional flow direction is INLET to OUTLET, but AP Tech valves may be employed in either flow direction.

Port locations are indicated by numbers.

INLET (Upstream) is defined as a port connected to the region below the valve seat. It is illustrated with an arrow pointing towards the valve body or an "empty" triangle on the schematic.

OUTLET (Downstream) is defined as a port connected to the region above the seat and below the diaphragm. It is illustrated with an arrow pointing away from the valve body or a "filled" triangle on the schematic.

LOTO Options for Diaphragm Valves

* Made to order specifications

Lockout Device/For Air Operated Valve (Order Separately)

Product number: AP PL210

Feature

- Lockable by installing the AP PL210 to the actuation port of air operated valve (only available for N.C. with actuation port connection NPT 1/8 inch)
- Prevent accidental valve opening by manually shutting off actuation pressure
- Lockable only in the closed position
- Accept standard pad lock with 1/4 inch shackle
- Actuation port connection: 10-32 UNF thread
- Actuation port pressure rating: Maximum 150 psig (1.0 MPa)

Operation

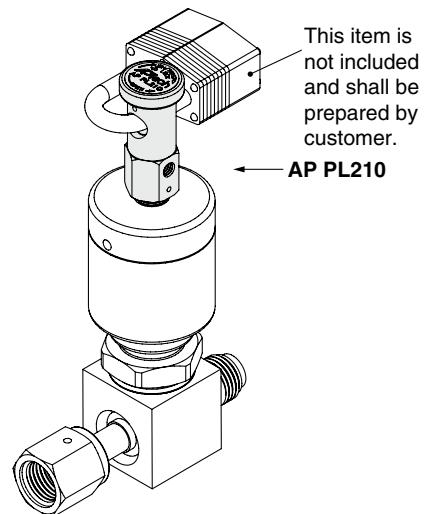

Push top button down and twist to close the valve. This feature allows the valve to stay in closed position even if actuation pressure is supplied into an actuation port. Valve opens by repositioning the button, then pressurizing the actuation port.

Series

AP3000, AP3113, AP3130, AP3200, AP3540, AP4540

AZ3000, AZ3540, AZ4540

AK3000, AK3540, AK4540

Lockout Device/For Manually Operated Valve (Order Separately)

Product number: AP PL225

Feature

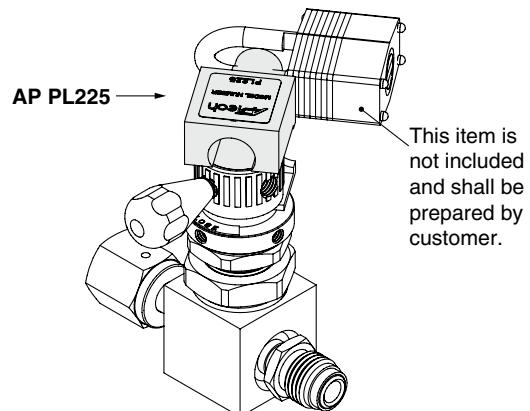

- Lockable by installing the AP PL225 to the manually operated valve (only available for lever knob)
- Lockable in the closed position
- Accept standard pad lock with 1/4 inch shackle.

Series

AP3125, AP3625, AP4625

AZ3125, AZ3625, AZ4625

AK3625, AK4625

Hook for Operational Safety Device (OSD) (Order Separately)

Product number: AP PL227

Feature

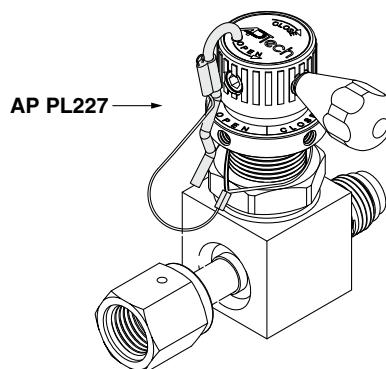

- Secure valve in the closed position by installing the AP PL227 to the top of the handle.
- Prevents accidental opening of the valve.

Series

AP3125, AP3625, AP4625

AZ3125, AZ3625, AZ4625

Process Gas Equipment/Diaphragm Valve Specific Product Precautions

Be sure to read this before handling the products. Refer to page 248 for safety instructions. For process gas equipment precautions, refer to pages 249, 250, and the "Operation Manual" on the SMC website: <https://www.smeworld.com>

Recommendations

Selection

⚠ Warning

1. Confirm the specifications.

This product is used in gas delivery systems to shutoff gas flow. When selecting the product, confirm the operating conditions, such as type of gas, operating pressure (inlet and outlet), flow rate, actuating pressure, operating temperature etc., and use within the operating range specified in the catalog. The product may not be suitable for use with specific gases and applications/environments. Check the compatibility of the product materials with the process gas.

Design the equipment and select the product by understanding the characteristics of gas.

Mounting

⚠ Warning

1. Confirm the mounting direction of the product.

Inlet ports are labeled with an "IN" mark. The outlet ports are usually not labeled but may be labeled with an "OUT" mark. Orient the valve as specified by the system designer.

2. Connect actuation pressure to the valve actuator connection. (Air operated type)

Use nitrogen or clean dry air for actuation pressure. The connection may be a 1/8 inch NPT female thread or M5 female thread depending on the valve model.

3. After installation, check internal leakage (leakage across seat) with inert gases.

Perform a helium leak test depending on applications.

Maintenance

⚠ Warning

1. If a valve requires repair, contact SMC.

Operation (Air operate type)

⚠ Warning

1. Use nitrogen or clean dry air as actuation pressure.

2. Confirm the valve type (N.C. or N.O.).

In the case of N.C. (Normally Closed), valve will open when applying actuation pressure to the valve actuator connection and valve will close when actuation pressure is vented to atmospheric pressure. In the case of N.O. (Normally Open), its actuation mechanism is opposite to the N.C. type. Valve will close when applying actuation pressure to the valve actuator connection.

3. Apply actuation pressure within the range of specifications.

Operation (Manually operated type)

⚠ Warning

4. When closing the valve, rotate the handle clockwise until it completely stops.

There is the internal stop in the handle or in the valve body. Rotate the handle clockwise until the internal stop is reached and it completely stops.

5. When closing the valve with LOTO feature, rotate the handle fully clockwise until the stop.

(AP/AZ/AK3657, AP/AZ/AK4657, AP3157, AP/AZ3900)

When the handle is fully clockwise, the indicator plate roller is aligned with a vertical slot in the handle allowing the handle to drop downward. This feature prevents the valve from being accidentally opened.

6. When opening the valve, rotate the handle counterclockwise until it completely stops.

There is the internal stop in the handle. Rotate the handle counterclockwise until the internal stop is reached and it completely stops.

7. When opening the valve with LOTO feature, the handle must first be lifted up, away from the valve body, and rotated counterclockwise until it completely stops.

(AP/AZ/AK3657, AP/AZ/AK4657, AP3157, AP/AZ3900)

When valve is closed, handle will not rotate as the fixed indicator plate roller is positioned within the vertical slot in the handle. The handle must first be lifted up away from the valve body and rotated counterclockwise until it completely stops.

8. Do not use a tool when rotating the handle.

When the handle is rotated with a tool, it may apply excessive torque to the handle or inside the valve body and it may cause damage. Rotate the handle by hand.

9. When locking the valve with LOTO feature in the closed position, use safety lockout hasp. (AP/AZ/AK3657, AP/AZ/AK4657, AP3157, AP/AZ3900)

The valve with LOTO feature has a built in LOTO capability. When using LOTO feature, rotate the handle clockwise and insert safety lockout hasp into lock stem slot.

Export

⚠ Warning

Some of the products or technologies in this catalog are subject to list control under the laws and regulations stipulated by the Ministry of Economy, Trade and Industry (Foreign Exchange and Foreign Trade Control Act).

When these products or technologies subject to list control are exported or provided, strictly follow the laws and regulations stipulated by the Ministry of Economy, Trade and Industry (Foreign Exchange and Foreign Trade Control Act).

In addition, when the products or technologies in this catalog are exported or provided, be sure to ensure that they are not intended for use as weapons or in any applications related to weapons.
