Compressed Air Preparation Filter

RoHS

Compressed Air Purity Class **ISO 8573**

Solid/Oil Separation	Line Filter <i>AFF</i> Series	1 μm	Filtration efficiency 99 %	Water droplet removal	Flow capacity L/min (ANR)	
	Mist Separator <i>AM</i> Series	0.1 μm	Filtration efficiency 99 %	Oil mist separation and removal	20	Up to 300
	Micro Mist Separator <i>AMD</i> Series	0.01 μm	Filtration efficiency 99.9 %	Oil mist separation and removal	30	Up to 750
	New Micro Mist Separator with Pre-filter <i>AMH</i> Series	0.01 μm	Filtration efficiency 99.99 %	Oil mist separation and removal	40	Up to 1500
Deodorization	Activated Carbon Filter <i>AMK</i> Series	0.003 mg/m^3	Oil concentration	Oil vapor and odor removal	50	Up to 2200
					60	Up to 3700

Weight reduced by 50% p. 4

AFF/AM/AMD20-D: 0.19 kg (Existing model: 0.38 kg)

With an AFF + AM + AMD, it's possible to achieve a nominal filtration rating of 0.01 μm and a filtration efficiency of 99.9999%.

Face-to-face and depth dimensions reduced by 30%

AFF/AM□30-D: □53 mm (Existing model: □76 mm)

AM50-D

AFF40-D

AM30-D

AMH30-D

AMD20-D

With clogging switch p. 3

The clogging status can be identified by the switch output.

AFF/AM/AMD/AMH/AMK Series

CAT.ES30-22E A

Reduced pressure drop contributes to energy saving.

AMD

AMH

AMK

Flow capacity

3700 L/min (ANR)

Pressure drop

Max. 50% reduction

AMD40: 6.8 kPa (Existing model AMD350C: 13.6 kPa)

AMK40: 4.7 kPa (Existing model AMF350C: 9.4 kPa)

AMH40: 7.7 kPa (Existing model AMH350C: 14.3 kPa)

Space-saving design and reduced piping labor

AFF Series

AFF

	AMG250C + AFF4C	AFF30-D
Face-to-face dimension	≈ 202 mm	53 mm

Approx. 150 mm reduction

The AFF series line filter removes both water droplets and solid particles. It can eliminate*1 a separate filter for removing water droplets (water separator, AMG series), thus greatly reducing the face-to-face dimension and also reducing the required installation space and piping work.

*1 When used within the product's specification range

Modular connection (AM + AMD + AMK)

AM

AMD

AMK

	AMH250C + AME250C + AMF250C	AM30-D + AMD30-D + AMK30-D
Face-to-face dimension	≈ 236 mm	≈ 167 mm
Weight	1.51 kg	1.17 kg
Flow capacity	500 L/min (ANR)	750 L/min (ANR)

Approx. 69 mm reduction

23% reduction

50% increase

The differential pressure check mode (PSE200A series) allows for the quantification of the clogging state of each filter element.

As the filter element does its job, the amount of clogging will gradually increase, resulting in **a drop in the pressure**. Ignoring this will lead to **energy loss**.

Scan or click here for details.

Example ①

Reduced thrust due to pressure drop

Example ②

Adsorption errors due to reduced flow rate

Element replacement period

Within **2 years***¹ of the start of use

or

Before the differential pressure reaches **0.1 MPa**

*1 Within 1 year for the AMK series

In order to prevent the above

The differential pressure of 2 filters can be managed by **a single unit**.

The differential pressure value to be output can be set freely according to the customer's system conditions.

[Ex.] When the differential pressure value to be output is set to 0.08 MPa

Continuously monitored remotely via IO-Link communication

Once 0.08 MPa is reached, a signal is output.

Easier replacement of the element

AFF AM AMD AMH AMK

Size 50/60

The stopper function prevents the bowl from falling.

The bowl will not fall even if the bolts are loosened. It is not necessary to hold the bowl when removing the bolts. Safe and secure mounting and removing of the bowl with both hands is possible. The lightweight stainless steel bowl with reduced thickness allows for easier element replacement.

Size 20 to 40

No tools are required.

Easy replacement of the element is possible as the element and the bowl are in one piece. Replacement can be done in hand.

Element replacement notification

AFF AM AMD AMH

With clogging switch

The clogging status can be identified by the switch output.

With element service indicator

The clogging status can be checked visually (green/red).

Lightweight

Simple Specials System

A system designed to respond quickly and easily to your special ordering needs

For modular connection units (shipped assembled), the simple specials system can be used.

Short lead times

This system enables us to respond to your special needs (additional machining, accessory assembly, or the designing of a modular unit) and deliver your personalized products as quickly as standard products.

Repeat orders

Once we receive a simple special part number from one of your previous orders, we will process the order, manufacture the product, and deliver it to you as quickly as possible.

Please contact your local sales representative for more details.

- *1 The drain guide is either NPT1/8 (applicable to the AFF20, AM20, and AMD20) or NPT1/4 (applicable to the AFF30 to AFF60, AM30 to AM60, AMD30 to AMD60, and AMH30 to AMH40). The auto drain port comes with a 3/8" One-touch fitting (applicable to the AFF30 to AFF60, AM30 to AM60, AMD30 to AMD60, and AMH30 to AMH40).
- *2 The drain guide is either G1/8 (applicable to the AFF20, AM20, and AMD20) or G1/4 (applicable to the AFF30 to AFF60, AM30 to AM60, AMD30 to AMD60, and AMH30 to AMH40).
- *3 A bracket is not assembled and supplied loose at the time of shipment. Including 2 mounting screws.
- *4 When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- *5 If the compressor is small (0.75 kW, discharge flow is less than 100 L/min (ANR)), air leakage from the drain cock may occur during the start of operations. The N.C. type is recommended.
- *6 Refer to the chemical data on page 34 for chemical resistance of the bowl.
- *7 A bowl guard is provided as standard equipment (polycarbonate).

- *8 A bowl guard is provided as standard equipment (nylon).
- *9 The combination of float type auto drain C and D is not available.
- *10 Without a valve function. The mounting screws are the same as the thread of ③.
- *11 The combination of metal bowl 2 and 8 is not available.
- *12 After purchase, option "Nil" (Without indicator) cannot be changed to option "L" (With element service indicator), "M," or "MM" (With clogging switch).
- *13 An auto switch cannot be installed with this option.
- *14 This option is equipped with a reed auto switch (model: D-A93VL). Contact SMC for other compatible models. Refer to page 32 for the auto switch specifications.
- *15 For pipe thread type: NPT
- This product is for overseas use only according to the new Measurement Act. (The SI unit type is provided for use in Japan.)
- *16 ○: For pipe thread type: NPT only

* The bowl assembly for sizes 20 to 40 comes with a bowl seal. The bowl assembly for sizes 50 and 60 comes with a flange and a bowl seal.

* The □ in the bowl assembly part numbers is for indicating the pipe thread type (applicable tubing for the auto drain). No indication is necessary for an Rc thread; however, indicate "N" for an NPT thread, and "F" for a G thread. (For auto drain, Nil: ø10, N: ø3/8") Please contact SMC separately for psi and °F unit display specifications.

*1 A bracket is not assembled and supplied loose at the time of shipment. Including 2 mounting screws.

*2 Refer to the chemical data on page 34 for chemical resistance of the bowl.

*3 A bowl guard is provided as standard equipment (polycarbonate).

*4 A bowl guard is provided as standard equipment (nylon).

*5 For pipe thread type: NPT

This product is for overseas use only according to the new Measurement Act. (The SI unit type is provided for use in Japan.)

*6 ○: For pipe thread type: NPT only

Bowl material		Polycarbonate			Stainless steel	
Bowl guard		Semi-standard (Steel)	Standard (Polycarbonate)		—	
Weight	kg	0.19	0.39	0.79	1.25	1.50

*1 For the following conditions in addition to the conditions above

- When a micro mist separator (AMD or AFD series) or micro mist separator with pre-filter (AMH series) is installed on the inlet side
- When the air flow capacity, upstream pressure, and oil concentration on the filter inlet side are stable
- When a new element is used

*2 The bowl seal and other O-rings are slightly lubricated.

*3 The compressed air purity class is indicated based on ISO 8573-1:2010 Compressed air – Part 1: Contaminants and purity classes. For details on this standard, refer to page 33.

*4 The compressed air quality class on the inlet side is [1 : 4 : 2].

*5 Inlet pressure: 0.7 MPa

Flow at 20°C, atmospheric pressure, and 65% of the relative humidity

Activated Carbon Filter **AMK Series**

Flow Rate Characteristics (Representative values)

* Compressed air over the max. flow capacity line in the table below may not meet the specifications of the product.

Clogging Switch Auto Switch Specifications (D-A93VL)

Refer to the SMC website for details on the products conforming to international standards.

Auto switch model	D-A93VL		
Auto switch specifications	Applicable load	Relay, PLC	
	Load voltage	24 VDC	100 VAC
	Load current range and Max. load current*2	5 to 40 mA*3	5 to 20 mA
	Internal circuit	*1	
	Contact protection circuit	None	
	Internal voltage drop	2.7 V or less	
	Indicator light	Red LED illuminates when turned ON.	
	Standards	CE/UKCA marking	
	Leakage current	None	
	Operating time	1.2 ms	
	Impact resistance	300 m/s ²	
	Insulation resistance	50 MΩ or more at 500 VDC Mega	
	Withstand voltage	1000 VAC for 1 min	
	Lead wire length	3 m	
	Weight	30 g	
	Ambient temperature	-10 to 60°C	
	Enclosure	IEC60529 standard IP67	
Oilproof heavy-duty lead wire specifications	Sheath	Outside diameter	ø2.7 mm
	Insulator	Number of cores	2 cores (Brown, Blue)
		Outside diameter	ø0.96 mm
	Conductor	Effective area	0.18 mm ²
		Strand diameter	ø0.08 mm
	Lead wire min. bending radius		17 mm

*1 Refer to the following circuit diagram for the internal circuit.

*2 Under 5 mA, the strength of the indicator light is poor. In some cases, visibility of the indicator light will not be possible when the output signal is less than 2.5 mA. However, there is no problem in terms of contact output when the output signal exceeds 1 mA.

*3 When using at 12 VDC, the auto switch operates normally, but the load may not operate depending on the specifications of the load. For details, refer to the description of the internal voltage drop of the auto switch in the "Reed Auto Switch/Common Precautions" section in the **Web Catalog**.

Compressed Air Purity Classes

Compressed air is used in a variety of manufacturing processes. In this age, compressed air with a high degree of purity is becoming increasingly necessary.

For this reason, it is necessary to remove contaminants from systems which supply compressed air and to secure the quality. The standard which stipulates the class according to the quantities of contaminants in compressed air is ISO 8573-1.

[Outline]

Stipulates the purity class of contaminants (particles, water, oil) mixed in with the compressed air

[Scope]

Can be used in various places in compressed air systems

[Purity Classes]

Class	Particles			Humidity and liquid water		Oil
	Maximum number of particles per cubic meter as a function of particle size d [μm]			Pressure dew point	Concentration of liquid water C _w	Concentration of total oil
	0.1 < d ≤ 0.5	0.5 < d ≤ 1.0	1.0 < d ≤ 5.0	[mg/m ³]	[°C]	[g/m ³]
0	As specified by the equipment user or supplier and more stringent than class 1					
1	≤ 20000	≤ 400	≤ 10	—	≤ -70	—
2	≤ 400000	≤ 6000	≤ 100	—	≤ -40	—
3	—	≤ 90000	≤ 1000	—	≤ -20	—
4	—	—	≤ 10000	—	≤ +3	—
5	—	—	≤ 100000	—	≤ +7	—
6	—	—	—	0 < C _p ≤ 5	≤ +10	—
7	—	—	—	5 < C _p ≤ 10	—	C _w ≤ 0.5
8	—	—	—	—	—	0.5 < C _w ≤ 5
9	—	—	—	—	—	5 < C _w ≤ 10
x	—	—	—	C _p > 10	—	C _w > 10

[Terms and Definitions]

- Purity class: An index assigned for each classification obtained by dividing the concentration of each contaminant into ranges
- Particle: Small discrete mass of solid or liquid matter
- Humidity and liquid water: Water vapor (gas), Water droplets
- Oil: Liquid oil, Oil mist, Oil vapor

[How to Perform a Test to Check the Performance]

ISO 12500, which sets out the test method to be used in order to check the filter performance for each of the three kinds of contaminants, is indicated below.

- Particle: ISO 12500-3:2009
- Liquid water: ISO 12500-4:2009
- Oil: ISO 12500-1:2007

* Measured using a dedicated evaluation system which has been certified according to ISO 12500-□ and also by a third party (Certified)

[Purity Class Designation Example]

ISO 8573-1:2010 [4 : 6 : 2]

List of systems which conform to the degree of purity required for compressed air

The class indicates the compressed air purity according to ISO 8573-1:2010 (JIS B 8392-1:2012) and indicates the maximum purity class which can be obtained using that system. Note, however, that this value will differ according to the inlet air conditions.

AFF/AM/AMD Series Combination

Nominal filtration rating: 0.01 μm , Filtration efficiency: 99.9999%

- The 99.9999% filtration efficiency value exceeds the 99.999% filtration efficiency value recommended by SQF (Safe Quality Food).

What is SQF?

Safe Quality Food is a food safety standard recognized by the GFSI (Global Food Safety Initiative).

Component	Main Line Filter AFF Series
	Mist Separator AM Series
	Micro Mist Separator AMD Series

Body size		20	30	40	50	60
Nominal filtration rating		0.01 μm				
Filtration efficiency		99.9999%				
Max. flow capacity*1	L/min (ANR)	300	750	1,500	2,200	3,700

*1 Inlet pressure: 0.7 MPa, 20°C

The HF1B series has products suitable for the food manufacturing industry.

AFF + AM + AMD

AFF/AM/AMD/AMH/AMK Series

Specific Product Precautions 1

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For air preparation equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smcworld.com>

Design

⚠ Warning

1. Resin is used for some of the external parts such as the bowl (Material: polycarbonate).

Organic solvents including thinner, acetone, alcohol, and ethylene chloride; chemicals including sulfuric acid, nitric acid, and hydrochloric acid; cutting oil, synthetic oil, ester-based compressor oil, alkali, kerosene, gasoline, and lock thread adhesive are harmful. Do not use the product where these are present.

Effects of organic solvents and chemicals on the equipment. Shown below is the chemical data of substances which cause degradation for reference.

Type	Chemical name	Application examples	Material	
			Polycarbonate	Nylon
Acid	Hydrochloric acid Sulfuric acid Phosphoric acid Acetic acid Chromic acid	Acid washing liquid for metals	△	×
Alkaline	Sodium hydroxide (Caustic soda) Potash Calcium hydroxide (Slack lime) Ammonia water Sodium carbonate	Degreasing of metals Industrial salts Water-soluble cutting oil	×	○
Inorganic salts	Sodium sulfide Potassium nitrate Sodium sulfate	—	×	△
Chlorine solvents	Carbon tetrachloride Chloroform Ethylene chloride Methylene chloride	Cleansing liquid for metals Printing ink Dilution	×	△
Aromatic series	Benzene Toluene Paint thinner	Coatings Dry cleaning	×	△
Ketone	Acetone Methyl ethyl ketone Cyclohexane	Photographic film Dry cleaning Textile industries	×	×
Alcohol	Ethyl alcohol IPA Methyl alcohol	Antifreeze Adhesives	△	×
Oil	Gasoline Kerosene	—	×	○
Ester	Phthalic acid dimethyl Phthalic acid diethyl	Synthetic oil Anti-rust additives	×	○
Ether	Methyl ether Ethyl ether	Brake oil additives	×	○
Amino	Methyl amino	Cutting oil Brake oil additives Rubber accelerator	×	×
Others	Thread-lock fluid Seawater Leak tester	—	×	△

○: Essentially safe △: Some effects may occur. ×: Effects will occur.

When the above factors are present, or there is some doubt, use a metal bowl for safety.

* The display window material is nylon.

Design

⚠ Warning

- Applications in which the difference between the inlet and outlet pressure exceeds 0.1 MPa must be avoided. Failure to do so may result in element breakage.
- For air blow applications, prevent airborne particles from the operating environment from entering into the compressed air stream. Foreign matter may adhere to workpieces during air blow as a result.
- If air equipment is installed on the outlet side of the product, particles may be generated from the equipment and thus the required cleanliness may not be obtained. Please consider installing air equipment on the inlet side of the product.

⚠ Caution

- The activated carbon filter (AMK series) adsorbs the oil vapor contained in compressed air and removes the odor derived from it, but it does not remove all odor.

Selection

⚠ Warning

- Select a model so that the max. discharge (instantaneous) flow rate value does not exceed the max. flow capacity.
- Use the N.O. type auto drain under the following conditions to avoid a malfunction.
Output of compressor: 0.75 kW or more
Discharged flow rate: 100 L/min (ANR) or more
If multiple auto drains are to be used, confirm whether the compressor has a sufficient capacity by multiplying the above capacity by the number of auto drains to be used. { For example, in order to use 2 auto drains, the compressor needs a capacity of 1.5 kW [200 L/min (ANR)] or more. } Set the operating pressure at 0.1 MPa or more.
- Use the N.C. type auto drain under the following conditions to avoid a malfunction.
Operating pressure for size 20: 0.1 MPa or more
Operating pressure for sizes 30 to 60: 0.15 MPa or more

Mounting

⚠ Warning

- Connect the product according to the "1"(IN) and "2"(OUT) indications or the arrows for air direction. Incorrect connection may result in a malfunction.
- Install with adequate space for maintenance beneath the product. Refer to the dimensions of each part for the necessary amount of space.
- Install vertically so that the drain outlet turns downward. Using with the drain outlet turned horizontal or upward may result in a malfunction.

Specific Product Precautions

AFF/AM/AMD/AMH/AMK Series

Specific Product Precautions 2

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For air preparation equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <https://www.smcworld.com>

Mounting

⚠ Warning

4. When using the product with a clogging switch, note the following points.

(1) Refer to the figure below to check the position of the auto switch.

**For 1 switch
(For symbol "M")**

Only on the right side when looking at the nameplate

**For 2 switches
(For symbol "MM")**

Both the right and left sides when looking at the nameplate

- (2) Do not hit the auto switch with a tool or allow it to receive any other impacts. Doing so may cause damage.
- (3) Do not attach or detach the auto switch equipped with a clogging switch. Otherwise, the detection accuracy of the clogging switch may be reduced. In addition, note that an auto switch with an element service indicator cannot be installed in combination.
- (4) Do not place magnetic objects near the product. Otherwise, a machine failure may result.

Piping

⚠ Warning

1. Tighten the 2 holding screws on the spacer with bracket or spacer evenly.

Tighten them to the recommended tightening torque. Insufficient tightening torque may result in loosening or sealing failure. Excessive tightening torque may damage the thread, etc.

Recommended Torque

Unit: N·m

Applicable model	AFF20 AM20 AMD20 AMK20	AFF30 AM30 AMD30 AMH30 AMK30	AFF40 AM40 AMD40 AMH40 AMK40	AFF50/AFF60 AM50/AM60 AMD50/AMD60 AMK50/AMK60
Spacer with bracket part number	Y200T-D	Y300T-D	Y400T-D	Y600T-D
Spacer part number	Y200-D	Y300-D	Y400-D	Y600-D
Torque	0.36 ±0.036	1.2 ±0.05	1.2 ±0.05	2.0 ±0.1

Piping

⚠ Warning

2. Piping load and moment

Avoid any torsional or bending moments other than those caused by the equipment's own weight as failure to do so may result in damage.

Support external piping separately. If moment application is unavoidable during operation, the moment should be lower than the max. moment shown below.

Piping materials without flexibility, such as steel tube piping, are prone to being affected by excess moment loads or vibrations from the piping side. Use flexible tubing in between to avoid such effects.

Unit: N·m

Applicable model	AFF20 AM20 AMD20 AMK20	AFF30 AM30 AMD30 AMH30 AMK30	AFF40 AM40 AMD40 AMH40 AMK40	AFF50/AFF60 AM50/AM60 AMD50/AMD60 AMK50/AMK60
Max. moment (M)	14.5	16	19.5	45

Max. moment (M) = Length (L) x Load (F)

3. Connect piping/fittings using the recommended torque while holding the female thread side tightly.

Insufficient tightening torque can result in loose piping or sealing failure. Over tightening may break the thread. If the female side is not held while tightening, excessive force will be applied to the bracket directly, resulting in breakage.

Recommended Tightening Torque

Unit: N·m

Connection thread	1/8	1/4	3/8	1/2	3/4	1
Torque	7 to 9	12 to 14	22 to 24	28 to 30	28 to 30	36 to 38

4. When an SMC One-touch fitting is used, refer to the operation manual for the One-touch fitting.

AFF/AM/AMD/AMH/AMK Series

Specific Product Precautions 3

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For air preparation equipment precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <https://www.smcworld.com>

Air Supply

Warning

1. Air containing too much moisture may deteriorate product performance. Install a refrigerated air dryer or an aftercooler on the inlet side of the product.

Caution

1. Install a micro mist separator (AMD or AFD series) or micro mist separator with pre-filter (AMH series) on the inlet side of the activated carbon filter (AMK series) to avoid performance degradation.

Maintenance

Warning

1. Replace the element according to the replacement timing explained below. Failure to do so may result in element breakage.
 - a. AFF20 to 60-D, AM20 to 60-D, AMD20 to 60-D, and AMH30 to 40-D
Within 2 years from the start of use or prior to a product pressure drop (difference in outlet pressure in relation to the inlet pressure) of 0.1 MPa
 - b. AMK20 to 60-D
1 year from the start of use or before the service life reaches 2000 hours (The replacement timing of the element varies depending on the operating conditions. Even before the above replacement timing is reached, if an oil smell is emitted from the outlet, replace the element periodically thereafter.)

Caution

1. For the N.C. type auto drain, when there is no pressure, condensate, which is not enough to activate the auto drain mechanism, will remain in the bowl. It is recommended that the residual condensate be released manually at the end of each work day.
2. For models with an element service indicator or clogging switch, as the element becomes more clogged, the indicator will display an increasing level of red. Be sure to replace the element before the level of red reaches the top of the indicator.

Maintenance

Caution

3. For the product equipped with a clogging switch, replace the element even if it has been used for 2 years or less when the installed auto switch (SW) is detected.

Element status when auto switch is detected

Symbol	No. of SW	Installation of SW	When SW is detected
-M	SW 1	No	—
	SW 2	Yes	Warning
-MM	SW 1	Yes	Caution
	SW 2	Yes	Warning

Caution: Replacement is recommended because the element is clogged.

Warning: The element is clogged, which may result in the destruction of the element. Be sure to replace the element.

4. Since the clogging switch does not have an output holding mechanism, note that the output will be OFF when there is no air flow in the element (when the equipment is stopped, etc.).

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

⚠ Danger : **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

⚠ Warning: **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Caution: **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

*1) ISO 4414: Pneumatic fluid power - General rules and safety requirements for systems and their components
ISO 4413: Hydraulic fluid power - General rules and safety requirements for systems and their components
IEC 60204-1: Safety of machinery - Electrical equipment of machines - Part 1: General requirements
ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1: Robots etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. SMC products cannot be used beyond their specifications. They are not developed, designed, and manufactured to be used under the following conditions or environments. Use under such conditions or environments is not allowed.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, combustion equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogs and operation manuals.
3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

Caution

SMC develops, designs, and manufactures products to be used for automatic control equipment, and provides them for peaceful use in manufacturing industries.

Use in non-manufacturing industries is not allowed.

Products SMC manufactures and sells cannot be used for the purpose of transactions or certification specified in the Measurement Act of each country. The new Measurement Act prohibits use of any unit other than SI units in Japan.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) **Suction cups (Vacuum pads) are excluded from this 1 year warranty.**

A suction cup (vacuum pad) is a consumable part, so it is warranted for a year after it is delivered.

Also, even within the warranty period, the wear of a product due to the use of the suction cup (vacuum pad) or failure due to the deterioration of rubber material are not allowed by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Revision History

Edition B * The AMK series activated carbon filter has been added.
* Number of pages has been increased from 16 to 24.

Edition C * Sizes 50 and 60 have been added.
* An element service indicator has been added.
* Number of pages has been increased from 24 to 32.

Edition D * A clogging switch has been added.
* Number of pages has been increased from 32 to 36.

Edition E * The AMH series micro mist separator with pre-filter has been added.
* Number of pages has been increased from 36 to 40.

⚠ Safety Instructions Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
