

Circulating Fluid Temperature Controller

Thermo-chiller Standard Type

No heater required, as the circulating fluid is heated using only the heat exhausted by the refrigerating circuit.

■ Heating-up time: 1/10

HRS150-A-20

[Test conditions]
Circulating fluid temperature: 5→35 °C
Ambient temperature: 32 °C
Power supply: 200 VAC/50 Hz
Circulating fluid flow rate:
Rated flow
Circulating fluid: Water
External piping: Bypass piping

Cooling valve control

Air-cooled condenser fan

Heating valve control

Cooling capacity

10 kW/15 kW

Set temperature range

5 °C to 35 °C

Max. ambient temperature

45 °C

Temperature stability
(When a load is stable)

±1.0 °C ±0.1 °C
(460 VAC type)

Low-noise design

70 dB(A)

Outdoor installation

IPX4

Compact, Space-saving

Added Variations!

Option

- With fluid fill port

Optional accessories

- Electric conductivity control set
- Relief valve set
- Snow protection hood (Air-cooled only)

Compatible with power supplies in Europe, Asia, Oceania, and North, Central, and South America

- 3-phase 200 VAC
- 3-phase 400 VAC
- 3-phase 460 VAC

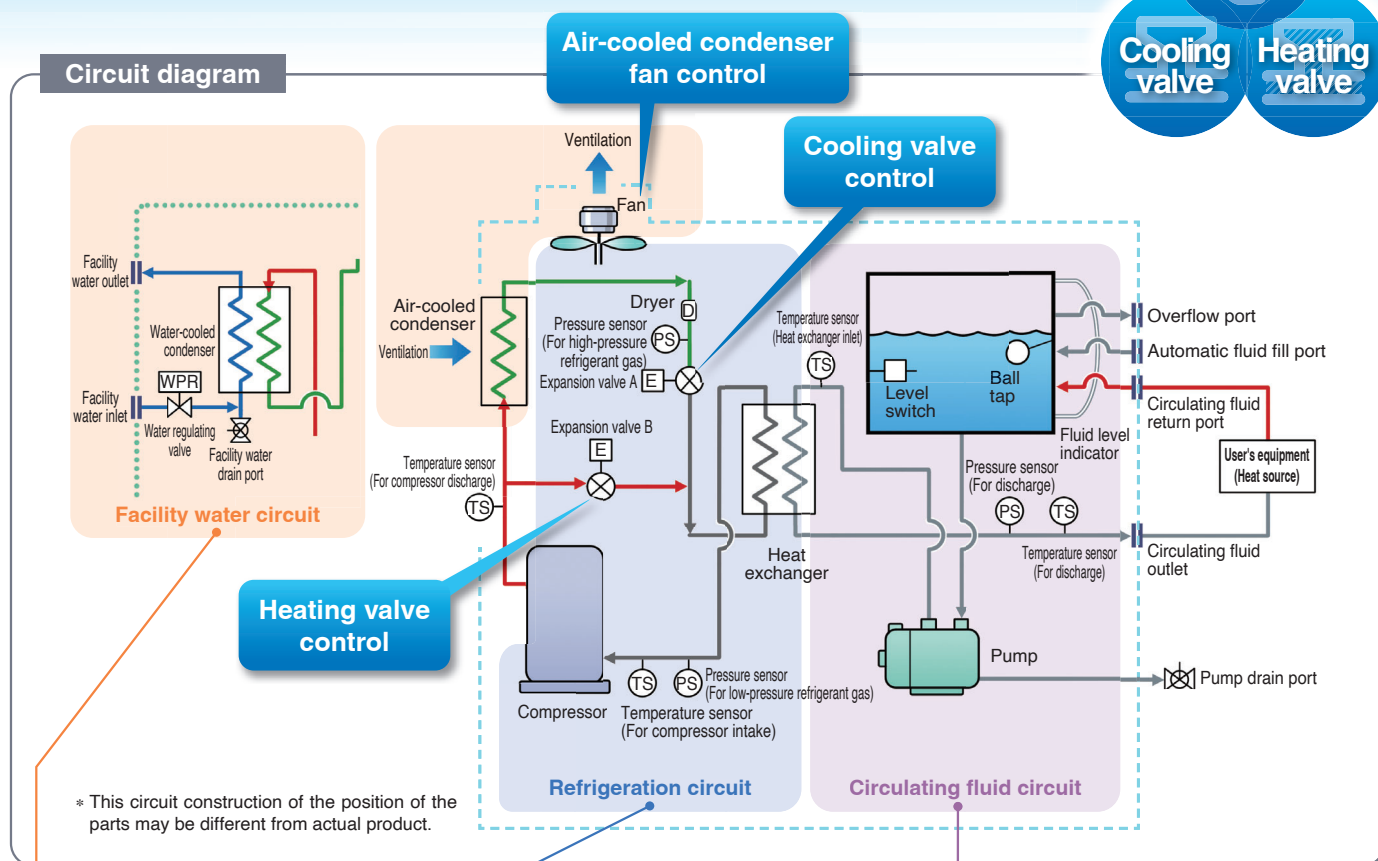

HRS100/150 Series

Environmental friendly
R410A as refrigerant

CAT.EUS40-62Ba-UK

Triple controller

Facility water circuit

For water-cooled refrigeration HRS□-W-□

- The water regulating valve opens and closes to keep the refrigerant gas pressure consistent. The facility water flow rate is controlled by the water regulating valve.

Refrigeration circuit

- The compressor compresses the refrigerant gas, and discharges the high temperature and high pressure refrigerant gas.
- In the case of air-cooled refrigeration, the high temperature and high pressure refrigerant gas is cooled down by an air-cooled condenser with the ventilation of the fan, and becomes a liquid. In the case of water-cooled refrigeration, the refrigerant gas is cooled by a water-cooled condenser with the facility water in the facility water circuit, and becomes a liquid.
- The liquefied high pressure refrigerant gas expands and its temperature lowers when it passes through expansion valve A and vaporises by taking heat from the circulating fluid in the evaporator.
- The vaporised refrigerant gas is sucked into the compressor and compressed again.
- When heating the circulating fluid, the high pressure and high temperature refrigerant gas is bypassed into the evaporator by expansion valve B, to heat the circulating fluid.

Point

The combination of precise control of **expansion valve A** for cooling, and **expansion valve B** for heating realised high temperature stability.

Circulating fluid circuit

- The circulating fluid discharged from the pump, is heated or cooled by the user's equipment and returns to the thermo-chiller.
- The circulating fluid is controlled to a set temperature by the refrigeration circuit, to be discharged to the user's equipment side again by the thermo-chiller.

Point

Since the refrigeration circuit is controlled by the signal from **2 temperature sensors (for return and discharge)**, precise temperature control of the circulating fluid can be performed. Therefore, there is no necessity of absorbing the temperature difference in the circulating fluid with a large tank capacity, and realises high temperature stability even with a **small-size tank**. Also, contributes to space-saving.

Variations

| Model | Cooling method | Cooling capacity [kW] (50/60 Hz) | Power supply | Option p. 16, 17 | Optional accessories p. 18 to 23 |
|---|----------------------------|----------------------------------|--|---|---|
|  HRS100 | Air-cooled refrigeration | 9.0/9.5 | • 3-phase 200 VAC (50 Hz), 3-phase 200 to 230 VAC (60 Hz) • 3-phase 380 to 415 VAC (50 Hz/60 Hz) • 3-phase 460 to 480 VAC (60 Hz) | • With caster adjuster-foot • With earth leakage breaker (For 400/460 V type as standard) • With earth leakage breaker with handle (For 400/460 V type as standard) • With fluid fill port • SI Unit Only | • Piping conversion fitting • Caster adjuster-foot kit • Electric conductivity control set • Bypass piping set • Relief valve set • Snow protection hood (Air-cooled only) • Particle filter set • Wired remote controller |
| HRS150 | | 13.0/14.5 | | | |
|  HRS100 | Water-cooled refrigeration | 10.0/11.0 | | | |
| HRS150 | | 14.5/16.5 | | | |

Circulating fluid can be heated without a heater.

Heating method using discharged heat makes a heater unnecessary.

* This is just an example diagram.

* For HRS150-A-40

- Conditions**
- Circulating fluid temperature: 5→35 °C
 - Ambient temperature: 32 °C
 - Power supply: 200 V/50 Hz
 - Circulating fluid flow rate: Rated flow
 - Circulating fluid: Water
 - External piping: Bypass piping

Electric conductivity control set (Optional accessories) (With DI filter + Solenoid valve kit for control) p. 19

The electric conductivity of the circulating fluid can be set with the controller monitor arbitrarily.

Set control range: 5.0 to 45.0 μ S/cm

Relief valve set (Optional accessories) p. 20

Prevents increase in circulating fluid discharge pressure.

(Relief pressure: 0.32 MPa)

Particle filter set p. 22

Removes foreign matter in the circulating fluid.

Effective to prevent foreign matter from entering the user's equipment and chiller.

- Prevents pump malfunction.
- Prevents lowering of the water-cooled condenser performance.

Improved maintenance performance

Circulating fluid fill port (Option)

Fluid fill port is equipped in the upper part of the tank in addition to the automatic fluid fill port for a tap water piping connection.

Front side access

All the electrical components can be checked from the front side for the easier maintenance work.

Alarm code list

Alarm code list stickers are included.

This can be put under the operation panel for reference.

(Alarm ▶ Page 14)

Operation display panel Easy maintenance with the check display

Alarm codes can be used for the notification of upcoming recommended maintenance.

The codes notify you when it's time to check the pump and fan motor. Helpful for facility maintenance.

Ex. AL01 "Low level in tank"

Check display

The internal temperature, pressure and operating time of the product are displayed.

Ex. drv. "Accumulated operating time"

| | Displayed item |
|----------------|---|
| Temperature | Circulating fluid outlet temperature |
| | Circulating fluid return temperature |
| | Compressor gas temperature |
| Flow rate | Circulating fluid flow rate*1 |
| | Circulating fluid outlet pressure |
| Pressure | Compressor gas discharge pressure |
| | Compressor gas return pressure |
| | Accumulated operating time |
| Operating time | Accumulated operating time of pump |
| | Accumulated operating time of fan *2 |
| | Accumulated operating time of compressor |
| | Accumulated operation time of dustproof filter *2 |

*1 This is not measurement value. Use it for reference. *2 These are displayed only for air-cooled refrigeration.

Convenient functions

Details ▶ Page 14

Timer function, Anti-freezing function, Power failure auto-restart function, Warming-up function, Key-lock function, etc.

Communication function

The serial communication (RS232C/RS485) and contact I/Os (2 inputs and 3 outputs) are equipped as standard. Communication with the user's equipment and system construction are possible, depending on the application. A 24 V DC output can be also provided, and is available for a flow switch (SMC's PF3W, etc.).

Ex.1 Remote signal I/O through serial communication

The remote operation is enabled (to start and stop) through serial communication.

Ex.2 Remote operation signal input

One of the contact inputs is used for remote operation and the other is used for a flow switch to monitor the flow, and their warning outputs are taken in.

Ex.3 Alarm and operation status (start, stop, etc.) signal output

The alarm and status generated in the product are assigned to 3 output signals based on their contents, and can be output.

Power supply (24 V DC) available

Power can be supplied from the terminal block of the thermo-chiller to external switches etc.

IPX4

IP (International Protection) is the industrial standard for "Degrees of protection provided by outer defensive enclosures of electric equipment (IP Code)" according to IEC 60529 and JIS C 0920.

IPX4: No harmful influence by water splash is acceptable from every direction.

Can be installed outdoors.

Globally compatible power supplies

(Europe, Asia, Oceania, Central and South America)

Existing model

Transformer unnecessary

Power supply Applicable to 200 to 230 VAC, 380 to 415 VAC, or 460 to 480 VAC
 Transformers are unnecessary even when used overseas.

Wired remote controller

(Optional accessory on page 121)

Operable from a distance.

With caster adjuster-foot (Option)

p. 18

⚠ Caution

Mechanical Seal Pump

The pump used for the thermo-chiller HRS 100/150 series uses a mechanical seal with the fixed ring and rotary ring used for the shaft seal part. If foreign matter enter the gap between the seals, this may cause a trouble such as leakage from the seal part or pump lock. Therefore, it is strongly recommended to install the particle filter in the return piping of the chiller.

Mechanical seal

HRS100/150 Series **Standard Type**

Dimensions

HRS100/150-A-20 (Air-cooled 200 V type)

HRS100/150-A-40 (Air-cooled 400 V type)

HRS100/150-A-46 (Air-cooled 460 V type)

Note 1) A breaker handle is equipped as standard for the 400 V type only.

Note 2) The HRS100 is not equipped with a lower dustproof filter.

HRS100/150-W-20 (Water-cooled 200 V type)

HRS100/150-W-40 (Water-cooled 400 V type)

HRS100/150-W-46 (Water-cooled 460 V type)

Note) A breaker handle is equipped as standard for the 400 V type only.

Accessory: Y-strainer mounting view

* Mount it by yourself on the circulating fluid return port.

Recommended External Piping Flow

External piping circuit is recommended as shown below.

* Ensure that the overflow port is connected to the wastewater collection pit in order to avoid damage to the tank of the thermo-chiller.

| No. | Description | Size | Recommended part no. | Note |
|-----|--------------------------------|------------------------|-------------------------|--|
| 1 | Valve | Rc1/2 | — | — |
| 2 | Valve | Rc3/4 | — | — |
| 3 | Y-strainer | Rc3/4 #40 | Accessory | Install either the strainer or filter. If foreign matter with a size of 20 μm or more are likely to enter, install the particle filter. For the recommended filter, refer to the optional accessory HRS-PF005 (page 120). |
| | Filter | Rc3/4 20 μm | HRS-PF005*1, 2 | |
| 4 | Flow meter | — | — | Prepare a flow meter with an appropriate flow range. |
| 5 | Valve (Part of thermo-chiller) | Rc1/4 | — | — |
| 6 | Y-strainer | Rc1/2 #40 | — | Install either the strainer or filter. If foreign matter with a size of 20 μm or more are likely to enter, install the particle filter. |
| | Filter | Rc1/2 20 μm | — | |
| 7 | Pressure gauge | 0 to 1.0 MPa | — | — |
| 8 | Y-strainer | Rc3/4 #40 | HRS-S0378 | Install either the strainer or filter. If foreign matter with a size of 20 μm or more are likely to enter, install the particle filter. |
| | Filter | Rc3/4 20 μm | FQ1012N-06-T020-B-X61*2 | |

*1 Use the Rc3/4 bushing together as the HRS-PF005 is Rc1.

*2 The filter shown above cannot be directly connected to the thermo-chiller. Install it in the user's piping system.

Cable Specifications

Power supply and signal cable should be prepared by user.

Power Cable Specifications

| Applicable model | Rated value for thermo-chiller | | | Power cable examples | |
|----------------------------------|-----------------------------------|----------------------------------|---------------------------|---|---|
| | Power supply | Applicable breaker rated current | Terminal block screw dia. | Cable size | Crimped terminal on the thermo-chiller side |
| HRS100-A□-20-□ HRS100-W□-20-□ | 3-phase 200 VAC (50 Hz) | 30 A | M5 | 4 cores x 5.5 mm ² (4 cores x AWG10) (Including grounding cable R5.5-5) | R5.5-5 |
| HRS150-A□-20-□ HRS150-W□-20-□ | 3-phase 200 to 230 VAC (60 Hz) | 40 A | | 4 cores x 8 mm ² (4 cores x AWG8) (Including grounding cable R8-5) | R8-5 |
| HRS100-A□-40-□ HRS100-W□-40-□ | 3-phase 380 to 415 VAC (50/60 Hz) | 20 A | M5 | 4 cores x 5.5 mm ² (4 cores x AWG10) (Including grounding cable R5.5-5) | R5.5-5 |
| HRS150-A□-40-□ HRS150-W□-40-□ | 3-phase 380 to 415 VAC (50/60 Hz) | 20 A | M5 | 4 cores x 5.5 mm ² (4 cores x AWG10) (Including grounding cable R5.5-5) | R5.5-5 |
| HRS100-A□-46-□ HRS100-W□-46-□ | 3-phase 380 to 415 VAC (50/60 Hz) | 20 A | M5 | 4 cores x 5.5 mm ² (4 cores x AWG10) (Including grounding cable R5.5-5) | R5.5-5 |
| HRS150-A□-46-□ HRS150-W□-46-□ | 3-phase 460 to 480 VAC (60 Hz) | 20 A | M5 | 4 cores x 5.5 mm ² (4 cores x AWG10) (Including grounding cable R5.5-5) | R5.5-5 |

* An example of the cable specifications is when two kinds of vinyl insulated wires with a continuous allowable operating temperature of 70°C at 600 V, are used at an ambient temperature of 30°C. Select the proper size of cable according to an actual condition.

Signal Cable Specifications

| Terminal specifications | | Cable specifications |
|-------------------------------|-------------------------------------|--|
| Terminal block screw diameter | Recommended crimped terminal | 0.75 mm ² (AWG18) Shielded cable |
| M3 | Y-shape crimped terminal 1.25Y-3 | |

Operation Display Panel

The basic operation of this unit is controlled through the operation display panel on the front of the product.

| No. | Description | Function |
|-----|--|--|
| ① | Digital display (7 segment, 4 digits) | PV Displays the circulating fluid current discharge temperature and pressure and alarm codes and other menu items (codes). SV Displays the circulating fluid discharge temperature and the set values of other menus. |
| ② | [°C] [°F] lamp | Equipped with a unit conversion function. Displays the unit of displayed temperature (default setting: °C). |
| ③ | [MPa] [PSI] lamp | Equipped with a unit conversion function. Displays the unit of displayed pressure (default setting: MPa). |
| ④ | [REMOTE] lamp | Enables remote operation (start and stop) by communication. Lights up during remote operation. |
| ⑤ | [RUN] lamp | Lights up when the product is started, and goes off when it is stopped. Flashes during stand-by for stop or anti-freezing function, or independent operation of the pump. |
| ⑥ | [ALARM] lamp | Flashes with buzzer when alarm occurs. |
| ⑦ | [L] lamp | Lights up when the surface of the fluid level indicator falls below the L level. |
| ⑧ | [C] lamp | Equipped with a timer for start and stop. Lights up when this function is operated. |
| ⑨ | [P] lamp | Equipped with a power failure auto-restart function, which restarts the product automatically after stopped due to a power failure. Lights up when this function is operated. |
| ⑩ | [RUN/STOP] key | Makes the product start or stop. |
| ⑪ | [MENU] key | Shifts the main menu (display screen of circulating fluid discharge temperature and pressure) and other menus (for monitoring and entry of set values). |
| ⑫ | [SEL] key | Changes the item in menu and enters the set value. |
| ⑬ | [▼] key | Decreases the set value. |
| ⑭ | [▲] key | Increases the set value. |
| ⑮ | [PUMP] key | Press the [MENU] and [RUN/STOP] keys simultaneously. The pump starts running independently to make the product ready for start-up (release the air). |
| ⑯ | [RESET] key | Press the [▼] and [▲] keys simultaneously. The alarm buzzer is stopped and the [ALARM] lamp is reset. |

List of Function

| No. | Function | Outline |
|-----|---|--|
| 1 | Main display | Displays the current and set temperature of the circulating fluid, discharge pressure of the circulating fluid. Changes the circulating fluid set temperature. |
| 2 | Alarm display menu | Indicates alarm number when an alarm occurs. |
| 3 | Inspection monitor menu | Product temperature, pressure and accumulated operating time can be checked as daily inspection. Use these for daily inspection. |
| 4 | Key-lock | Keys can be locked so that set values cannot be changed by operator error. |
| 5 | Timer for operation start/stop | Timer is used to set the operation start/stop. |
| 6 | Signal for the completion of preparation | A signal is output when the circulating fluid temperature reaches the set temperature, when using contact input/output and serial communication. |
| 7 | Offset function | Use this function when there is a temperature offset between the discharge temperature of the thermo-chiller and user's equipment. |
| 8 | Reset after power failure | Start operation automatically after the power supply is turned on. |
| 9 | Key click sound setting | Operation panel key sound can be set on/off. |
| 10 | Changing temp. unit | Temperature unit can be changed. Centigrade (°C) ↔ Fahrenheit (°F) |
| 11 | Changing pressure unit | Pressure unit can be changed. MPa ↔ PSI |
| 12 | Data reset | Functions can be reset to the default settings (settings when shipped from the factory). |
| 13 | Accumulation time reset | Reset function when the pump, the fan or the compressor is replaced. Reset the accumulated time here. |
| 14 | Anti-freezing function | Circulating fluid is protected from freezing during winter or at night. Set beforehand if there is a risk of freezing. |
| 15 | Warming-up function | When circulating fluid temperature rising time at starting needs shortening during winter or at night, set beforehand. |
| 16 | Anti-snow coverage function | If there will be a possibility of the snow coverage due to the change of the installation environment (season, weather), set beforehand. |
| 17 | Alarm buzzer sound setting | Alarm sound can be set to on/off. |
| 18 | Alarm customising | Operation during alarm condition and threshold values can be changed depending on the alarm type. |
| 19 | Communication | This function is used for contact input/output or serial communication. |

Alarm

This unit has alarms as standard, and displays each of them by its alarm code on the PV screen with the [ALARM] lamp ([LOW LEVEL] lamp) lit up on the operation display panel. The alarm can be read out through communication.

| Code | Alarm message |
|------|--|
| AL01 | Low level in tank |
| AL02 | High circulating fluid discharge temp. |
| AL03 | Circulating fluid discharge temp. rise |
| AL04 | Circulating fluid discharge temp. drop |
| AL05 | High circulating fluid return temp. |
| AL06 | High circulating fluid discharge pressure |
| AL07 | Abnormal pump operation |
| AL08 | Circulating fluid discharge pressure rise |
| AL09 | Circulating fluid discharge pressure drop |
| AL10 | High compressor intake temp. |
| AL11 | Low compressor intake temp. |
| AL12 | Low super heat temp. |
| AL13 | High compressor discharge pressure |
| AL15 | Refrigeration circuit pressure (high pressure side) drop |
| AL16 | Refrigeration circuit pressure (low pressure side) rise |

| Code | Alarm message |
|------|---|
| AL17 | Refrigeration circuit pressure (low pressure side) drop |
| AL18 | Compressor running failure |
| AL19 | Communication error |
| AL20 | Memory error |
| AL21 | DC line fuse cut |
| AL22 | Circulating fluid discharge temp. sensor failure |
| AL23 | Circulating fluid return temp. sensor failure |
| AL24 | Compressor intake temp. sensor failure |
| AL25 | Circulating fluid discharge pressure sensor failure |
| AL26 | Compressor discharge pressure sensor failure |
| AL27 | Compressor intake pressure sensor failure |
| AL28 | Pump maintenance |
| AL29 | Fan maintenance |
| AL30 | Compressor maintenance |
| AL31 | Contact input 1 signal detection |

| Code | Alarm message |
|------|---|
| AL32 | Contact input 2 signal detection |
| AL37 | Compressor discharge temp. sensor failure |
| AL38 | Compressor discharge temp. rise |
| AL40 | Dustproof filter maintenance ^{Note 1)} |
| AL41 | Power stoppage |
| AL42 | Compressor waiting |
| AL43 | Fan failure ^{Note 1)} |
| AL45 | Compressor over current |
| AL47 | Pump over current |
| AL49 | Air exhaust fan stoppage ^{Note 2)} |
| AL50 | Incorrect phase error |
| AL51 | Phase board over current |

Note 1) Does not occur on the product of water-cooled refrigeration type.

Note 2) Does not occur on the product of air-cooled refrigeration type.

* For details, read the Operation Manual.

For details, refer to the Operation Manual. Please download it via our website, <http://www.smc.eu>

HRS100/150 Series

Options

* Options have to be selected when ordering the thermo-chiller. It is not possible to add them after purchasing the unit.

A Option symbol

With Caster Adjuster-foot

HRS□-□□-□-□-**A**

● With caster adjuster-foot

Unfixed casters and adjuster feet stops are mounted.

| Applicable model | Dimension [mm] | | | Additional weight*1 [kg] |
|-------------------------|----------------|-----|------|--------------------------|
| | A | B | C | |
| HRS100/150-A-20/40/46-A | 830 | 302 | 1552 | Approx. 16 |
| HRS100/150-W-20/40/46-A | 570 | 401 | 1353 | Approx. 18 |

*1 Refers to the amount of increase from the standard weight

B Option symbol

With Earth Leakage Breaker

HRS□-□□-20-**B**

● With earth leakage breaker

A leakage breaker is built in to automatically stop the supply power when it has short-circuit, over current or electrical leakage.

| Applicable model | Rated current [A] | Sensitivity of leak current [mA] | Short circuit display method |
|------------------|-------------------|----------------------------------|------------------------------|
| HRS100-A/W-20 | 30 | 30 | Mechanical button |
| HRS150-A/W-20 | 40 | | |

* 400 V/460 V type is equipped as standard.

* Cannot be selected together with option B1.

B1 Option symbol

With Earth Leakage Breaker with Handle

HRS□-□□-20-**B1**

● With earth leakage breaker with handle

A breaker operation handle that can be operated without removing the front panel for the electrical unit is mounted. The capacity, sensitivity of leak current, and operating characteristics of the breaker are the same as option B. (It is not necessary to select this option since an earth leakage breaker with a handle is installed for the models with power supply specification '–40' or '–46' as standard equipment.)

The front panel of the electrical unit cannot be removed without turning off the breaker.

* 400 V/460 V type is equipped as standard.

* Cannot be selected together with option B.

HRS100/150 Series

K Option symbol With Fluid Fill Port

HRS□-□-□-□-**K**

● With fluid fill port

When the automatic fluid fill port is not used, fluid can be supplied manually without removing the panel.

* Dimensions are common to all models.

W Option symbol SI Unit Only

HRS□-□-□-□-**W**

● SI unit only

The circulating fluid temperature and pressure are displayed in SI units [MPa/°C] only.
If this option is not selected, a product with a unit selection function will be provided by default.

* No change in external dimensions

HRS100/150 Series

Optional Accessories

① Piping Conversion Fitting

This is a fitting to change the port from Rc to G or NPT.

- Circulating fluid outlet, Circulating fluid return port Rc 3/4 → NPT 3/4 or G 3/4
- Overflow port Rc 1 → NPT 1 or G 1
- Automatic fluid fill port Rc 1/2 → NPT 1/2 or G 1/2
- Facility water inlet, Facility water outlet Rc 3/4 → NPT 3/4 or G 3/4 (for HRS-EP029 or HRS-EP030)

(It is not necessary to purchase this when pipe thread type F or N is selected in “How to Order” since it is included in the product.)

| Part no. | Contents | Applicable model | Material |
|-----------|-----------------------------------|------------------|-----------------|
| HRS-EP027 | NPT thread conversion fitting set | HRS100/150-A-□ | Stainless steel |
| HRS-EP028 | G thread conversion fitting set | | |
| HRS-EP029 | NPT thread conversion fitting set | HRS100/150-W-□ | |
| HRS-EP030 | G thread conversion fitting set | | |

HRS-EP027, HRS-EP028

HRS-EP029, HRS-EP030

② Caster Adjuster-foot Kit

This is a set of unfixed casters and adjuster feet stop.

When installed by user, it is necessary to lift the thermo-chiller by a forklift or sling work.

Carefully read the procedure manual included with this kit before performing the installation.

| Part no. | Applicable model | Dimension [mm] | | Weight [kg] |
|-----------|------------------|----------------|-----|-------------|
| | | A | B | |
| HRS-KS003 | HRS100/150-A-□-□ | 830 | 302 | Approx. 16 |
| HRS-KS002 | HRS100/150-W-□-□ | 570 | 401 | Approx. 18 |

Fig. 1 Mounting view

| Procedure manual |
| Caster adjuster-foot bracket (2 pcs.) |
| Fixing bolt (M8) (8 pcs.) |

Fig. 2 Caster adjuster-foot bracket (2 pcs.)

Fig. 3 Fixing bolt (8 pcs.)

HRS100/150 Series

③ Electric Conductivity Control Set

The set indicates and controls the electric conductivity of the circulating fluid. Refer to the Operation Manual for details.

| Part no. | Applicable model |
|-----------|------------------|
| HRS-DI010 | HRS100-□□-□ |
| | HRS150-□□-□ |

| | |
|--|------------------------------|
| Measurement range of electric conductivity | 2.0 to 48.0 $\mu\text{S/cm}$ |
| Set range of electric conductivity target | 5.0 to 45.0 $\mu\text{S/cm}$ |
| Set range of electric conductivity hysteresis | 2.0 to 10.0 $\mu\text{S/cm}$ |
| Operating temperature range (Circulating fluid temperature) | 5 to 60 °C |
| Power consumption | 400 mA or less |
| Installation environment | Indoors |

Parts List

| No. | Description | Fluid contact material | Qty. |
|-----|--|------------------------|------|
| ① | DI filter vessel | PC, PP | 1 |
| ② | DI sensor assembly | Stainless steel, PPS | 1 |
| ③ | DI control piping assembly | Stainless steel, EPDM | 1 |
| ④ | DI filter outlet tube | PFA, POM | 1 |
| ⑤ | DI filter inlet tube | PFA, POM | 1 |
| ⑥ | Nipple (Size: 3/4) | Stainless steel | 2 |
| ⑦ | Mounting bracket | — | 1 |
| ⑧ | Mounting screw (M5 screw) | — | 4 |
| ⑨ | Tapping screw (M5 screw) | — | 4 |
| ⑩ | DI filter cartridge (Part no.: HRS-DF001)*1 | PP, PE | 1 |

*1 The product should be replaced when it can no longer preserve the electrical conductivity set value.

④ Bypass Piping Set

Ensure that the circulating fluid flow rate will be more than the minimum required flow rate using a bypass piping set so that the circulating fluid discharge pressure would be 0.5 MPa or less. Otherwise, an alarm due to circulating fluid discharge pressure or pump over current may occur.

| Part no. | Applicable model | Minimum operating flow rate [l/min] (50 / 60 Hz) |
|-----------|------------------|---|
| HRS-BP007 | HRS100-□□-□ | 28/42 |
| | HRS150-□□-□ | |

Parts List

| No. | Description | Fluid contact material | Qty. |
|-----|--|-----------------------------------|-----------------------|
| ① | Hose (I.D.: 15 mm) | PVC | 1 (Approx. 700 mm) |
| ② | Outlet piping assembly (With globe valve) | Stainless steel, Brass, Bronze | 1 |
| ③ | Return piping assembly | Stainless steel, Brass | 1 |
| ④ | Nipple (Size: 3/4) | Stainless steel | 4 |
| ⑤ | Union (Size: 3/4) | Stainless steel | 2 |
| ⑥ | Sealant tape | PTFE | 1 |
| ⑦ | Operation Manual | — | 1 |

⑤ Relief Valve Set

If a solenoid valve is installed in the user's system and the circulating fluid supply stops or decreases during thermo-chiller operation, the circulating fluid discharge pressure of the thermo-chiller increases and an alarm may occur. The relief valve set opens the valve when the pressure exceeds the set pressure level, which prevents pressure increase.

| Part no. | Applicable model |
|------------------|--|
| HRS-BP008 | HRS100-□□-□ HRS150-□□-□ |

- Relief valve set pressure: 0.32 MPa (The relief valve starts to open when the circulating fluid discharge pressure reaches 0.32 MPa.)
- The setting is made so that the circulating fluid discharge pressure of the thermo-chiller does not exceed 0.5 MPa even when the thermo-chiller is operated at 60 Hz and the water is no longer supplied to the user's system.
- The set pressure of the relief valve should not be adjusted (or changed) by the user. If the set pressure needs to be adjusted, it should be conducted by authorised engineers.

Parts List

| No. | Description | Fluid contact material | Qty. |
|-----|------------------------|------------------------|-----------------------|
| ① | Hose (I.D.: 15 mm) | PVC | 1 (Approx. 700 mm) |
| ② | Outlet piping assembly | Stainless steel, Brass | 1 |
| ③ | Return piping assembly | Stainless steel, Brass | 1 |
| ④ | Nipple (Size: 3/4) | Stainless steel | 4 |
| ⑤ | Union (Size: 3/4) | Stainless steel | 2 |
| ⑥ | Sealant tape | PTFE | 1 |
| ⑦ | Operation Manual | — | 1 |

HRS100/150 Series

⑥ Snow Protection Hood

Snow protection hood for air-cooled chiller. According to the mounting direction of the snow protection hood, the ventilation from the fan can be selected from four directions, front, rear, left and right.

Front

Right

Left

Rear

| Part no. | Applicable model |
|-----------|------------------|
| HRS-BK005 | HRS100-A□-□ |
| | HRS150-A□-□ |

| No. | Description | Q'ty |
|-----|---------------------------|------|
| ① | Snow protection hood base | 1 |
| ② | Snow protection hood A | 1 |
| ③ | Snow protection hood B | 2 |
| ④ | Assembly/Mounting screw | 18 |

Mounting condition for HRS-BK005

* This hood does not completely prevent snow from entering the inside of the chiller.

⑦ Particle Filter Set

Removes foreign matter in the circulating fluid. If foreign matter such as scales in the piping enter the circulating fluid, this may cause the pump to malfunction. Therefore, it is strongly recommended to install the particle filter set. This set cannot be directly connected to the thermo-chiller. Install it in the user's piping system. For details, refer to the Operation Manual.

Particle Filter Set

HRS-PF005-H

● Accessory

| Symbol | Accessory |
|--------|-------------|
| — | None |
| H | With handle |

| | |
|-----------------------------|-----------|
| Fluid | Tap water |
| Max. operating pressure | 0.65 MPa |
| Operating temperature range | 5 to 35°C |
| Nominal filtration accuracy | 5 μm |
| Installation environment | Indoors |

Parts List

| No. | Description | Material | Qty. | Note |
|-----|-----------------|-----------------|------|---------------------------|
| ① | Body | PC, PP | 1 | — |
| ② | Element | PP | 1 | — |
| ③ | Extension piece | Stainless steel | 2 | Conversion from NPT to Rc |
| ④ | Handle | — | 1 | When -H is selected |
| ⑤ | Sealant tape | PTFE | 1 | — |

* The product should be replaced when the pressure drop reaches 0.1 MPa.

Replacement Element

HRS-PF006

The product should be replaced when the pressure drop reaches 0.1 MPa.

HRS100/150 Series

⑧ Wired Remote Controller

When the wired remote controller is connected to the thermo-chiller, the operation start/stop setting or the set temperature can be changed from a place apart from the thermo-chiller. For details, refer to the Operation Manual.

Wired Remote Controller

HRS-CV004-1

Accessories

| Symbol | Accessories |
|--------|----------------------------|
| — | None |
| 1 | With cable (Approx. 20 m) |
| 2 | With cable (Approx. 50 m) |
| 3 | With cable (Approx. 100 m) |

Displayed items

| |
|---|
| Circulating fluid discharge temperature |
| Circulating fluid discharge set temperature |
| Circulating fluid discharge pressure |
| Circulating fluid electric conductivity*1 |
| Circulating fluid flow rate |
| Alarm code*2 |

- *1 Only when the electric conductivity control set is used.
- *2 Only when an alarm occurs. The alarm cannot be reset with the remote controller. Be sure to reset the alarm with the thermo-chiller main unit.

Operable items

| |
|---------------------------------------|
| Operation start/stop |
| Circulating fluid temperature setting |
| Alarm sound stop |
| Key-lock |
| Key operation sound ON/OFF |
| Digital display brightness adjustment |
| Alarm sound ON/OFF |

- * To use the wired remote controller, the thermo-chiller main unit setting is needed.
- * Use the wired remote controller indoors.
- * Pass the cable through the duct, etc. so that it is not exposed to rain water or direct sunlight.

HRS100/150 Series

Cooling Capacity Calculation

Required Cooling Capacity Calculation

Example 1: When the heat generation amount in the user's equipment is known.

The heat generation amount can be determined based on the power consumption or output of the heat generating area — i.e. the area requiring cooling — within the user's equipment.*

① Derive the heat generation amount from the power consumption.

Power consumption **P**: 7 [kW]

$$Q = P = 7 \text{ [kW]}$$

Cooling capacity = Considering a safety factor of 20 %, $7 \text{ [kW]} \times 1.2 = \boxed{8.4 \text{ [kW]}}$

② Derive the heat generation amount from the power supply output.

Power supply output **VI**: 8.8 [kVA]

$$Q = P = V \times I \times \text{Power factor}$$

In this example, using a power factor of 0.85:

$$= 8.8 \text{ [kVA]} \times 0.85 = 7.5 \text{ [kW]}$$

Cooling capacity = Considering a safety factor of 20 %, $7.5 \text{ [kW]} \times 1.2 = \boxed{9.0 \text{ [kW]}}$

③ Derive the heat generation amount from the output.

Output (shaft power etc.) **W**: 5.1 [kW]

$$Q = P = \frac{W}{\text{Efficiency}}$$

In this example, using an efficiency of 0.7:

$$= \frac{5.1}{0.7} = 7.3 \text{ [kW]}$$

Cooling capacity = Considering a safety factor of 20 %, $7.3 \text{ [kW]} \times 1.2 = \boxed{8.8 \text{ [kW]}}$

* The above examples calculate the heat generation amount based on the power consumption. The actual heat generation amount may differ due to the structure of the user's equipment. Be sure to check it carefully.

Example 2: When the heat generation amount in the user's equipment is not known.

Obtain the temperature difference between inlet and outlet by circulating the circulating fluid inside the user's equipment.

Heat generation amount by user's equipment **Q** : Unknown [W] ([J/s])
 Circulating fluid : Tap water*
 Circulating fluid mass flow rate **qm** : ($= \rho \times qv \div 60$) [kg/s]
 Circulating fluid density ρ : 1 [kg/l]
 Circulating fluid (volume) flow rate **qv** : 35 [l/min]
 Circulating fluid specific heat **C** : 4.186×10^3 [J/(kg·K)]
 Circulating fluid outlet temperature **T1** : 293 [K] (20 [°C])
 Circulating fluid return temperature **T2** : 296 [K] (23 [°C])
 Circulating fluid temperature difference ΔT : 3 [K] ($= T_2 - T_1$)
 Conversion factor: minutes to seconds (SI units) : 60 [s/min]

$$Q = qm \times C \times (T_2 - T_1)$$

$$= \frac{\rho \times qv \times C \times \Delta T}{60} = \frac{1 \times 35 \times 4.186 \times 10^3 \times 3.0}{60}$$

$$= 7325 \text{ [J/s]} \approx 7325 \text{ [W]} = 7.3 \text{ [kW]}$$

Cooling capacity = Considering a safety factor of 20 %, $7.3 \text{ [kW]} \times 1.2 = \boxed{8.8 \text{ [kW]}}$

Example of conventional measurement units (Reference)

Heat generation amount by user's equipment **Q** : Unknown [cal/h] → [W]
 Circulating fluid : Tap water*
 Circulating fluid weight flow rate **qm** : ($= \rho \times qv \div 60$) [kgf/h]
 Circulating fluid weight volume ratio γ : 1 [kgf/l]
 Circulating fluid (volume) flow rate **qv** : 35 [l/min]
 Circulating fluid specific heat **C** : 1.0×10^3 [cal/(kgf·°C)]
 Circulating fluid outlet temperature **T1** : 20 [°C]
 Circulating fluid return temperature **T2** : 23 [°C]
 Circulating fluid temperature difference ΔT : 3 [°C] ($= T_2 - T_1$)
 Conversion factor: hours to minutes : 60 [min/h]
 Conversion factor: kcal/h to kW : 860 [(cal/h)/W]

$$Q = \frac{qm \times C \times (T_2 - T_1)}{860}$$

$$= \frac{\gamma \times qv \times 60 \times C \times \Delta T}{860}$$

$$= \frac{1 \times 35 \times 60 \times 1.0 \times 10^3 \times 3.0}{860}$$

$$\approx 7325 \text{ [W]} = 7.3 \text{ [kW]}$$

Cooling capacity = Considering a safety factor of 20 %, $7.3 \text{ [kW]} \times 1.2 = \boxed{8.8 \text{ [kW]}}$

Required Cooling Capacity Calculation

Example 3: When there is no heat generation, and when cooling the object below a certain temperature and period of time.

Heat quantity by cooled substance (per unit time) **Q** : Unknown [W] ([J/s])
 Cooled substance : Water
 Cooled substance mass **m** : (= $\rho \times V$) [kg]
 Cooled substance density ρ : 1 [kg/l]
 Cooled substance total volume **V** : 150 [L]
 Cooled substance specific heat **C** : 4.186×10^3 [J/(kg·K)]
 Cooled substance temperature when cooling begins **T₀** : 303 [K] (30 [°C])
 Cooled substance temperature after t hour **T_t** : 293 [K] (20 [°C])
 Cooling temperature difference ΔT : 10 [K] (= $T_0 - T_t$)
 Cooling time Δt : 900 [s] (= 15 [min])

* Refer to the following for the typical physical property values by circulating fluid.

$$Q = \frac{m \times C \times (T_0 - T_t)}{\Delta t} = \frac{\rho \times V \times C \times \Delta T}{\Delta t}$$

$$= \frac{1 \times 150 \times 4.186 \times 10^3 \times 10}{900} = 6977 \text{ [J/s]} \approx 7.0 \text{ [kW]}$$

Cooling capacity = Considering a safety factor of 20 %,
 $7.0 \text{ [kW]} \times 1.2 = \mathbf{8.4 \text{ [kW]}}$

Example of conventional measurement units (Reference)

Heat quantity by cooled substance (per unit time) **Q** : Unknown [cal/h] → [W]
 Cooled substance : Water
 Cooled substance weight **m** : (= $\rho \times V$) [kgf]
 Cooled substance weight volume ratio γ : 1 [kgf/l]
 Cooled substance total volume **V** : 150 [L]
 Cooled substance specific heat **C** : 1.0×10^3 [cal/(kgf·°C)]
 Cooled substance temperature when cooling begins **T₀** : 30 [°C]
 Cooled substance temperature after t hour **T_t** : 20 [°C]
 Cooling temperature difference ΔT : 10 [°C] (= $T_0 - T_t$)
 Cooling time Δt : 15 [min]
 Conversion factor: hours to minutes : 60 [min/h]
 Conversion factor: kcal/h to kW : 860 [(cal/h)/W]

$$Q = \frac{m \times C \times (T_0 - T_t)}{\Delta t \times 860} = \frac{\gamma \times V \times 60 \times C \times \Delta T}{\Delta t \times 860}$$

$$= \frac{1 \times 150 \times 60 \times 1.0 \times 10^3 \times 10}{15 \times 860}$$

$$\approx 6977 \text{ [W]} = 7.0 \text{ [kW]}$$

Cooling capacity = Considering a safety factor of 20 %,
 $7.0 \text{ [kW]} \times 1.2 = \mathbf{8.4 \text{ [kW]}}$

Note) This is the calculated value by changing the fluid temperature only.
 Thus, it varies substantially depending on the water bath or piping shape.

Precautions on Cooling Capacity Calculation

1. Heating capacity

When the circulating fluid temperature is set above room temperature, it needs to be heated by the thermo-chiller. The heating capacity depends on the circulating fluid temperature. Consider the radiation rate and heat capacity of the user's equipment and check beforehand if the required heating capacity is provided.

2. Pump capacity

<Circulating fluid flow rate>

Circulating fluid flow rate varies depending on the circulating fluid discharge pressure. Consider the installation height difference between the thermo-chiller and the user's equipment, and the piping resistance such as circulating fluid pipings, or piping size, or piping curves in the machine. Check beforehand if the required flow is achieved, using the pump capacity curves.

<Circulating fluid discharge pressure>

Circulating fluid discharge pressure has the possibility to increase up to the maximum pressure in the pump capacity curves.

Check beforehand if the circulating fluid pipings or circulating fluid circuit of the user's equipment are fully durable against this pressure.

Circulating Fluid Typical Physical Property Values

1. This catalogue uses the following values for density and specific heat in calculating the required cooling capacity.

Density ρ : 1 [kg/l] (or, using conventional unit system, weight volume ratio γ = 1 [kgf/l])

Specific heat **C**: 4.19×10^3 [J/(kg·K)] (or, using conventional unit system, 1×10^3 [cal/(kgf·°C)])

2. Values for density and specific heat change slightly according to temperature shown below. Use this as a reference.

Water

| Physical property value Temperature | Density ρ [kg/l] | Specific heat C [J/(kg·K)] | Conventional unit system | |
|--|--------------------------|-------------------------------|--------------------------------------|--------------------------------|
| | | | Weight volume ratio γ [kgf/l] | Specific heat C [cal/(kgf·°C)] |
| 5 °C | 1.00 | 4.2×10^3 | 1.00 | 1×10^3 |
| 10 °C | 1.00 | 4.19×10^3 | 1.00 | 1×10^3 |
| 15 °C | 1.00 | 4.19×10^3 | 1.00 | 1×10^3 |
| 20 °C | 1.00 | 4.18×10^3 | 1.00 | 1×10^3 |
| 25 °C | 1.00 | 4.18×10^3 | 1.00 | 1×10^3 |
| 30 °C | 1.00 | 4.18×10^3 | 1.00 | 1×10^3 |
| 35 °C | 0.99 | 4.18×10^3 | 0.99 | 1×10^3 |
| 40 °C | 0.99 | 4.18×10^3 | 0.99 | 1×10^3 |

15 % Ethylene Glycol Aqueous Solution

| Physical property value Temperature | Density ρ [kg/l] | Specific heat C [J/(kg·K)] | Conventional unit system | |
|--|--------------------------|-------------------------------|--------------------------------------|--------------------------------|
| | | | Weight volume ratio γ [kgf/l] | Specific heat C [cal/(kgf·°C)] |
| 5 °C | 1.02 | 3.91×10^3 | 1.02 | 0.93×10^3 |
| 10 °C | 1.02 | 3.91×10^3 | 1.02 | 0.93×10^3 |
| 15 °C | 1.02 | 3.91×10^3 | 1.02 | 0.93×10^3 |
| 20 °C | 1.01 | 3.91×10^3 | 1.01 | 0.93×10^3 |
| 25 °C | 1.01 | 3.91×10^3 | 1.01 | 0.93×10^3 |
| 30 °C | 1.01 | 3.91×10^3 | 1.01 | 0.94×10^3 |
| 35 °C | 1.01 | 3.91×10^3 | 1.01 | 0.94×10^3 |
| 40 °C | 1.01 | 3.92×10^3 | 1.01 | 0.94×10^3 |

Note) The above shown are reference values. Contact circulating fluid supplier for details.

HRS100/150 Series Specific Product Precautions 1

Be sure to read this before handling the products. For safety instructions and temperature control equipment precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <http://www.smc.eu>

Design

Warning

1. This catalogue shows the specifications of a single unit.

- 1) Check the specifications of the single unit (contents of this catalogue) and thoroughly consider the adaptability between the user's system and this unit.
- 2) Although the protection circuit as a single unit is installed, prepare a drain pan, water leakage sensor, discharge air facility, and emergency stop equipment, depending on the user's operating condition. Also, the user is requested to carry out the safety design for the whole system.

2. When attempting to cool areas that are open to the atmosphere (tanks, pipes), plan your piping system accordingly.

When cooling open-air external tanks, arrange the piping so that there are coil pipes for cooling inside the tanks, and to carry back the entire flow volume of circulating fluid that is released.

3. Use non-corrosive materials for circulating fluid contact parts.

The recommended circulating fluid is tap water or 15% ethylene glycol aqueous solution. Using corrosive materials such as aluminium or iron for fluid contact parts such as piping may cause clogging or leakage in the circulating fluid circuit. Therefore, take sufficient care when selecting fluid contact part materials such as piping.

4. Design the piping so that no foreign matter enters the chiller.

If foreign matter, such as scales in the piping, enters the circulating fluid, this may cause the pump to malfunction. Therefore, it is strongly recommended to install the particle filter.

5. The facility water outlet temperature (water-cooled type) may increase up to around 60 °C.

When selecting the facility water pipings, consider the suitability for temperature.

Selection

Warning

Model selection

When selecting a thermo-chiller model, the amount of heat generation from the user's equipment must be known. Obtain this value, referring to “Cooling Capacity Calculation” on pages 132 and 133 before selecting a model.

Handling

Warning

Thoroughly read the Operation Manual.

Read the Operation Manual completely before operation, and keep the manual where it can be referred to as necessary.

Operating Environment/Storage Environment

Warning

1. Do not use in the following environment as it will lead to a breakdown.

- 1) In locations where water vapour, salt water, and oil may splash on the product.
- 2) In locations where there are dust and particles.
- 3) In locations where corrosive gases, organic solvents, chemical fluids, or flammable gases are present. (This product is not explosion proof.)
- 4) In locations where the ambient temperature exceeds the limits as mentioned below.

During transportation/storage: -15 °C to 50 °C (But as long as water or circulating fluid are not left inside the pipings)

During operation: -5 °C to 45 °C (However, use a 15 % ethylene glycol aqueous solution if operating in a place where the ambient temperature or circulating fluid temperature is 10 °C or less.)

- 5) In locations where condensation may occur.
- 6) In locations which receive direct sunlight or radiated heat.
- 7) In locations where there is a heat source nearby and the ventilation is poor.
- 8) In locations where temperature substantially changes.
- 9) In locations where strong magnetic noise occurs.
(In locations where strong electric fields, strong magnetic fields and surge voltage occur.)
- 10) In locations where static electricity occurs, or conditions which make the product discharge static electricity.
- 11) In locations where high frequency occurs.
- 12) In locations where damage is likely to occur due to lightning.
- 13) In locations at altitude of 3000 m or higher (Except during storage and transportation)

* For altitude of 1000 m or higher

Because of lower air density, the heat radiation efficiencies of the devices in the product will be lower in the location at altitude of 1000 m or higher. Therefore, the maximum ambient temperature to use and the cooling capacity will lower according to the descriptions in the table below.

Select the thermo-chiller considering the descriptions.

- ① Upper limit of ambient temperature: Use the product in ambient temperature of the described value or lower at each altitude.
- ② Cooling capacity coefficient: The product's cooling capacity will lower to one that multiplied by the described value at each altitude.

| Altitude [m] | ① Upper limit of ambient temperature [°C] | ② Cooling capacity coefficient |
|------------------|---|--------------------------------|
| Less than 1000 m | 45 | 1.00 |
| Less than 1500 m | 42 | 0.85 |
| Less than 2000 m | 38 | 0.80 |
| Less than 2500 m | 35 | 0.75 |
| Less than 3000 m | 32 | 0.70 |

- 14) In locations where strong impacts or vibrations occur.
- 15) In locations where a massive force strong enough to deform the product is applied or a weight from a heavy object is applied.
- 16) In locations where there is not sufficient space for maintenance.
- 17) In locations where liquid that exceeds the conditions required for the degrees of protection IPX4 may splash on the product.
- 18) Insects or plants may enter the unit.

2. The product is not designed for clean room usage. It generates particles internally.

3. The product is not dust-proof.

If used in an environment with dust, it may accumulate inside the product and cause not only a malfunction but also a fire hazard.

HRS100/150 Series Specific Product Precautions 2

Be sure to read this before handling the products. For safety instructions and temperature control equipment precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <http://www.smc.eu>

Transportation/Carriage/Movement

Warning

1. This product will require an acceptance with the product not unloaded from the truck, and the user will need to unload the product by himself. Prepare a forklift.

The product will be delivered in the packaging shown below.

<When packaged>

| Model | Weight [kg] | Dimensions [mm] |
|-----------------------|-------------|--------------------------------------|
| HRS100-A□-□ | 212 | Height 1585 x Width 1185 x Depth 955 |
| HRS150-A□-□ | 218 | |
| HRS100-W□-□ | 186 | Height 1485 x Width 925 x Depth 955 |
| HRS150-W□-□ | 189 | |
| HRS100-A□-□- A | 231 | Height 1710 x Width 1185 x Depth 955 |
| HRS150-A□-□- A | 242 | |
| HRS100-W□-□- A | 210 | Height 1610 x Width 925 x Depth 955 |
| HRS150-W□-□- A | 213 | |

2. Transportation by forklift

- 1) A licensed driver should drive the forklift.
- 2) The proper place to insert the tines of the forklift differs depending on the model of cooler. Check the insert position, and be sure to drive the fork in far enough for it to come out the other side.
- 3) Be careful not to bump the fork to the cover panel or piping ports.

Warning

3. Hanging transportation

- 1) Crane manipulation and slinging work should be done by an eligible person.
- 2) Do not grip the piping on the right side or the handles of the panel.
- 3) When hanging by the eye bolts, be sure to use a 4-point hanging method. For the hanging angle, use caution regarding the position of the centre of gravity and hold it within 60°.

<When using option A>

4. Transporting using casters

- 1) This product is heavy and should be moved by at least two persons.
- 2) Do not grip the piping port on the right side or the handles of the panel.
- 3) When transporting using a forklift, be sure not to let it hit the casters or adjusters, and drive the fork all the way through until it comes out the other side.
- 4) Do not get across steps with casters.

Caution

If this product is to be transported after delivery, please use the original packaging the product was delivered in. If other packaging is to be used, carefully package the product so as to prevent the product from incurring any damage during transport.

Mounting/Installation

Warning

Do not place heavy objects on top of this product, or step on it.

The external panel can be deformed and danger can result.

Caution

1. Install on a rigid floor which can withstand this product's weight.
2. Secure with bolts, anchor bolts, etc.

HRS100/150 Series Specific Product Precautions 3

Be sure to read this before handling the products. For safety instructions and temperature control equipment precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <http://www.smc.eu>

Mounting/Installation

⚠ Caution

3. Refer to the Operation Manual for this product, and secure an installation space that is necessary for the maintenance and ventilation.

<Air-cooled refrigeration>

1. The air-cooled type product exhausts heat using the fan that is mounted to the product. If the product is operated with insufficient ventilation, ambient temperature may exceed 45 °C, and this will affect the performance and life of the product. To prevent this ensure that suitable ventilation is available (see below).
2. For installation indoors, ventilation ports and a ventilation fan should be equipped as needed.

Required installation space for ventilation and maintenance

HRS150-A-20

3. If it is impossible to exhaust heat from the installation area indoors, or when the installation area is conditioned, provide a duct for heat exhaustion to the air outlet port of this product for ventilation. Do not mount the inlet of the duct (flange) directly to the air vent of the product, and keep a space larger than the diameter of the duct. Additionally, consider the resistance of the duct when making the air vent port for the duct.

<Heat radiation amount/Required ventilation rate>

| Model | Heat radiation amount [kW] | Required ventilation rate [m³/min] | |
|------------|----------------------------|--|--|
| | | Differential temp. of 3 °C between inside and outside of installation area | Differential temp. of 6 °C between inside and outside of installation area |
| HRS100-A-□ | Approx. 18 | 305 | 155 |
| HRS150-A-□ | Approx. 26 | 440 | 220 |

⚠ Caution

<Water-cooled refrigeration>

When installing the product, keep the space for maintenance as shown below.

Piping

⚠ Caution

1. Regarding the circulating fluid and facility water pipings, consider carefully the suitability for temperature, circulating fluid and facility water.

If the operating performance is not sufficient, the pipings may burst during operation. Also, the use of corrosive materials such as aluminum or iron for fluid contact parts, such as piping, may not only lead to clogging or leakage in the circulating fluid and facility water circuits but also refrigerant leakage and other unexpected problems. Provide protection against corrosion when you use the product.

2. Select the piping port size which can exceed the rated flow.
For the rated flow, refer to the pump capacity table.
3. When tightening at the drain port of this product, use a pipe wrench to clamp the connection ports.
4. Supply water pressure to the automatic fluid fill port of this product should be 0.2 to 0.5 MPa.

This product has a built-in ball (float) tap. If you attach it to the faucet of a sink etc. it will automatically supply water to the rated fluid level of the tank (halfway between HIGH and LOW.) If the water supply pressure is too high, the pipes may burst during use. Proceed with caution.

5. Ensure that piping is connected to the overflow port so that the circulating fluid can be exhausted to the drainage pit when the fluid level in the tank increases.
6. For the circulating fluid piping connection, install a drain pan and wastewater collection pit just in case the circulating fluid may leak.
7. This product series are constant-temperature fluid circulating machines with built-in tanks.

Do not install equipment on your system side such as pumps that forcibly return the circulating fluid to the unit. Also, if you attach an external tank that is open to the air, it may become impossible to circulate the circulating fluid. Proceed with caution.

8. The facility water flow rate is adjusted automatically according to the operating conditions. In addition, the facility water return temperature is 60 °C at maximum.

HRS100/150 Series Specific Product Precautions 4

Be sure to read this before handling the products. For safety instructions and temperature control equipment precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <http://www.smc.eu>

Electrical Wiring

Warning

Grounding should never be connected to a water line, gas line or lightning rod.

Caution

1. Power supply and communication cables should be prepared by user.

2. Provide a stable power supply which is not affected by surge or distortion.

If the voltage increase ratio (dV/dt) at the zero cross should exceed 40 V/200 μ sec., it may result in malfunction.

<For option B [With earth leakage breaker]>

3. This product is installed with a breaker with the following operating characteristics.

For the user's equipment (inlet side), use a breaker whose operating time is equal to or longer than the breaker of this product. If a breaker with shorter operating time is connected, the user's equipment could be cut off due to the inrush current of the motor of this product.

HRS100-A/W-20/40, HRS150-A/W-40

Caution

HRS150-A/W-20

HRS100-A/W-46, HRS150-A/W-46

HRS100/150 Series

Specific Product Precautions 5

Be sure to read this before handling the products. For safety instructions and temperature control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <http://www.smc.eu>

Circulating Fluid

⚠ Caution

1. Avoid oil or other foreign objects entering the circulating fluid.
2. When water is used as a circulating fluid, use tap water that conforms to the appropriate water quality standards.

Use tap water that conforms to the standards shown below (including water used for dilution of ethylene glycol aqueous solution).

Tap Water (as Circulating Fluid) Quality Standards

The Japan Refrigeration and Air Conditioning Industry Association
JRA GL-02-1994 "Cooling water system – Circulation type – Make-up water"

| | Item | Unit | Standard value | Influence | |
|----------------|--|---------|-------------------------|-----------|------------------|
| | | | | Corrosion | Scale generation |
| Standard item | pH (at 25 °C) | — | 6.0 to 8.0 | ○ | ○ |
| | Electric conductivity (25 °C) | [μS/cm] | 100* to 300* | ○ | ○ |
| | Chloride ion (Cl ⁻) | [mg/l] | 50 or less | ○ | |
| | Sulfuric acid ion (SO ₄ ²⁻) | [mg/l] | 50 or less | ○ | |
| | Acid consumption amount (at pH4.8) | [mg/l] | 50 or less | | ○ |
| | Total hardness | [mg/l] | 70 or less | | ○ |
| | Calcium hardness (CaCO ₃) | [mg/l] | 50 or less | | ○ |
| | Ionic state silica (SiO ₂) | [mg/l] | 30 or less | | ○ |
| Reference item | Iron (Fe) | [mg/l] | 0.3 or less | ○ | ○ |
| | Copper (Cu) | [mg/l] | 0.1 or less | ○ | |
| | Sulfide ion (S ₂ ⁻) | [mg/l] | Should not be detected. | ○ | |
| | Ammonium ion (NH ₄ ⁺) | [mg/l] | 0.1 or less | ○ | |
| | Residual chlorine (Cl) | [mg/l] | 0.3 or less | ○ | |
| | Free carbon (CO ₂) | [mg/l] | 4.0 or less | ○ | |

* In the case of [MΩ·cm], it will be 0.003 to 0.01.

○: Factors that have an effect on corrosion or scale generation.

• Even if the water quality standards are met, complete prevention of corrosion is not guaranteed.

3. Use an ethylene glycol that does not contain additives such as preservatives.
4. When using an ethylene glycol aqueous solution, maintain a maximum concentration of 15 %.
Overly high concentrations can cause a pump overload.
Low concentrations, however, can lead to freezing when circulating fluid temperature is 10 °C or lower and cause the thermo-chiller to break down.
5. When deionised water is used, the electric conductivity should be 1 μS/cm or higher (Electric resistivity: 1 MΩ·cm or lower).

Facility Water Supply

⚠ Warning

<Water-cooled refrigeration>

1. The water-cooled refrigeration type thermo-chiller radiates heat to the facility water.
Prepare the facility water system that satisfies the heat radiation and the facility water specifications below.

■ Required facility water system

<Heat radiation amount/Facility water specifications>

| Model | Heat radiation [kW] | Facility water specifications |
|------------|---------------------|---|
| HRS100-W-□ | Approx. 19 | Refer to "Facility water system" in the specifications on page 8. |
| HRS150-W-□ | Approx. 28 | |

2. When using tap water as facility water, use water that conforms to the appropriate water quality standards.
Use water that conforms to the standards shown below.
If the water quality standards are not met, clogging or leakage in the facility water piping, or other problems such as refrigerant leakage, etc., may result.

Tap Water (as Facility Water) Quality Standards

The Japan Refrigeration and Air Conditioning Industry Association
JRA GL-02-1994 "Cooling water system – Circulation type – Make-up water"

| | Item | Unit | Standard value | Influence | |
|----------------|--|---------|-------------------------|-----------|------------------|
| | | | | Corrosion | Scale generation |
| Standard item | pH (at 25 °C) | — | 6.5 to 8.2 | ○ | ○ |
| | Electric conductivity (25 °C) | [μS/cm] | 100* to 800* | ○ | ○ |
| | Chloride ion (Cl ⁻) | [mg/l] | 200 or less | ○ | |

| | Sulfide ion (S ₂ ⁻) | [mg/l] | Should not be detected. | ○ | |
| | Ammonium ion (NH ₄ ⁺) | [mg/l] | 1.0 or less | ○ | |
| | Residual chlorine (Cl) | [mg/l] | 0.3 or less | ○ | |
| | Free carbon (CO ₂) | [mg/l] | 4.0 or less | ○ | |

* In the case of [MΩ·cm], it will be 0.001 to 0.01.

○: Factors that have an effect on corrosion or scale generation.

• Even if the water quality standards are met, complete prevention of corrosion is not guaranteed.

3. Set the supply pressure between 0.3 to 0.5 MPa. Ensure a pressure difference at the facility water inlet/outlet of 0.3 MPa or more.

If the supply pressure is high, it will cause water leakage. If the supply pressure and pressure difference at the facility water inlet/outlet is low, it will cause an insufficient flow rate of the facility water, and poor temperature control.

HRS100/150 Series

Specific Product Precautions 6

Be sure to read this before handling the products. For safety instructions and temperature control equipment precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <http://www.smc.eu>

Operation

⚠ Warning

1. Confirmation before operation

- 1) The fluid level of a tank should be within the specified range of “HIGH” and “LOW”.
When exceeding the specified level, the circulating fluid will overflow.
- 2) Remove the air.
Conduct a trial operation, looking at the fluid level.
Since the fluid level will go down when the air is removed from the user’s piping system, supply water once again when the fluid level is reduced. When there is no reduction in the fluid level, the job of removing the air is completed.
Pump can be operated independently.

2. Confirmation during operation

- Check the circulating fluid temperature.
The operating temperature range of the circulating fluid is between 5 and 35 °C.
When the amount of heat generated from the user’s equipment is greater than the product’s capability, the circulating fluid temperature may exceed this range. Use caution regarding this matter.

3. Emergency stop method

- When an abnormality is confirmed, stop the machine immediately. After the machine has stopped, make sure to turn off the breaker of the user’s equipment (on the upstream side).

Operation Restart Time

⚠ Caution

1. Wait five minutes or more before restarting operation after it has been stopped. If the operation is restarted within five minutes, the protection circuit may activate and the operation may not start properly.
2. Operation and suspension frequency should not exceed 10 times per day. Frequently switching between operation and suspension may result in the malfunction of the refrigeration circuit.

Protection Circuit

⚠ Caution

If operating in the below conditions, the protection circuit will activate and an operation may not be performed or will stop.

- Power supply voltage is not within the rated voltage range of $\pm 10\%$.
- In case the water level inside the tank is reduced abnormally.
- Circulating fluid temperature is too high.
- Compared to the cooling capacity, the heat generation amount of the user’s equipment is too high.
- Ambient temperature is over 45 °C.
- Ventilation hole is clogged with dust or dirt.

Maintenance

⚠ Caution

<Periodical inspection every one month>

Clean the ventilation hole.

If the dustproof filter of water-cooled type product becomes clogged with dust or debris, a decline in cooling performance can result.
In order to avoid deforming or damaging the dustproof filter, clean it with a long-haired brush or air gun.

<Periodical inspection every three months>

Inspect the circulating fluid.

1. When using tap water or deionised water
 - Replacement of circulating fluid
Failure to replace the circulating fluid can lead to the development of bacteria or algae. Replace it regularly depending on your usage conditions.
2. When using ethylene glycol aqueous solution
Use a concentration meter to confirm that the concentration does not exceed 15 %.
Dilute or add as needed to adjust the concentration.

<Periodical inspection during the winter season>

1. Make water-removal arrangements beforehand.

If there is a risk of the circulating fluid and facility water freezing when the product is stopped, release the circulating fluid and facility water in advance.

2. Consult a professional.

This product has an “anti-freezing function”, “warming-up function”, and “anti-snow coverage function”. Read the Operation Manual carefully, and if any additional anti-freezing function (e.g. tape heater) is needed, ask for it from the vendor.

■ Refrigerant with GWP reference

| Refrigerant | Global warming potential (GWP) | | |
|-------------|--|---|---|
| | Regulation (EU) No 517/2014 (Based on the IPCC AR4) | Fluorocarbon Emissions Control Act (Japan) GWP value labeled on products | GWP value to be used for reporting the calculated amount of leakage |
| R134a | 1,430 | 1,430 | 1,300 |
| R404A | 3,922 | 3,920 | 3,940 |
| R407C | 1,774 | 1,770 | 1,620 |
| R410A | 2,088 | 2,090 | 1,920 |

- * This product is hermetically sealed and contains fluorinated greenhouse gases (HFC). When this product is sold on the market in the EU after January 1, 2017, it needs to be compliant with the quota system of the F-Gas Regulation in the EU.
- * See specification table for refrigerant used in the product.

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) ¹⁾, and other safety regulations.

Danger:

Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

Warning:

Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

Caution:

Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

- 1) ISO 4414: Pneumatic fluid power – General rules and safety requirements for systems and their components.
ISO 4413: Hydraulic fluid power – General rules and safety requirements for systems and their components.
IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1: Robots.
etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Our products cannot be used beyond their specifications. Our products are not developed, designed, and manufactured to be used under the following conditions or environments.

Use under such conditions or environments is not covered.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, fuel equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogues and operation manuals.
3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

Caution

We develop, design, and manufacture our products to be used for automatic control equipment, and provide them for peaceful use in manufacturing industries.

Use in non-manufacturing industries is not covered.

Products we manufacture and sell cannot be used for the purpose of transactions or certification specified in the Measurement Act.

The new Measurement Act prohibits use of any unit other than SI units in Japan.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first. ²⁾ Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty.
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Safety Instructions

Be sure to read “Handling Precautions for SMC Products” (M-E03-3) before using.
