| * Lead wire length symbols |  |  | $05 \mathrm{~m} .$. Nil (Example) F6N <br> $3 \mathrm{~m} .$. L (Example) F6NL <br> $5 \mathrm{~m} .$. $Z$ (Example) F6NZ |  |  | * Auto switches marked with a "○" symbol are produced upon receipt of orders |  |  |  |  |  |  |

- Refer to "SMC Best Pneumatics" catalog vol. 10, page 10-20-66 for detailed specifications about the auto switch with pre-wired connector.

## Specifications

| Bore size (mm) | $\mathbf{3 2}$ | $\mathbf{4 0}$ | $\mathbf{5 0}$ |
| :--- | :---: | :---: | :---: |
| Action | Double acting, Single rod |  |  |
| Fluid | Air |  |  |
| Minimum operating pressure | 0.15 MPa |  |  |
| Maxmum operating pressure | 1.0 MPa |  |  |
| Proof pressure | 1.5 MPa |  |  |
| Ambient and operating fluid <br> temperature | Without auto switch $0^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ |  |  |
| Lubrication | With auto switch $0^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}$ |  |  |
| Piston speed | Not required |  |  |
| Cushion | 50 to $500 \mathrm{~mm} / \mathrm{s}$ (With pressure at 1.0 MPa$)^{\mathrm{Note})}$ |  |  |
| Stroke length tolerance | Air cushion |  |  |
| Piston rod material | $250 \mathrm{~mm}{ }_{0}^{+1.0} \mathrm{~mm}$ or less, 251 to $600 \mathrm{~mm}{ }_{0}^{+1.4} \mathrm{~mm}$ |  |  |

Note) Use a cylinder below the allowable kinetic energy. Refer to page 16 for the allowable kinetic energy.

## Standard Stroke

| Bore size $(\mathrm{mm})$ | Standard stroke $(\mathrm{mm})$ |
| :---: | :---: |
| $\mathbf{3 2}$ | $25,50,75,100,125,150,200,250,300,400,500$ |
| $\mathbf{4 0}$ | $25,50,75,100,125,150,200,250,300,400,500$ |
| $\mathbf{5 0}$ | $25,50,75,100,125,150,200,250,300,400,500,600$ |
| 63 | $25,50,75,100,125,150,200,250,300,400,500,600$ |

* Intermediate strokes of 1 mm each can be produced. (The spacer is not used. )

## Weight

Without auto switch
Unit: kg

| $\begin{aligned} & \text { Bore size } \\ & (\mathrm{mm}) \end{aligned}$ | Stroke (mm) |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 25 | 50 | 75 | 100 | 125 | 150 | 200 | 250 | 300 | 400 | 500 | 600 |
| 32 | 0.89 | 1.02 | 1.14 | 1.26 | 1.38 | 1.50 | 1.75 | 1.99 | 2.23 | 2.72 | 3.21 | - |
| 40 | 1.30 | 1.46 | 1.62 | 1.79 | 1.95 | 2.11 | 2.44 | 2.77 | 3.09 | 3.75 | 4.40 | - |
| 50 | 2.03 | 2.26 | 2.50 | 2.73 | 2.96 | 3.20 | 3.66 | 4.13 | 4.59 | 5.52 | 6.45 | 7.38 |
| 63 | 2.95 | 3.25 | 3.54 | 3.84 | 4.13 | 4.43 | 5.02 | 5.61 | 6.21 | 7.39 | 8.57 | 9.76 |

With auto switch (Built-in magnet and switch rail)
Unit: kg

| $\begin{gathered} \text { Bore size } \\ (\mathrm{mm}) \end{gathered}$ | Stroke (mm) |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 25 | 50 | 75 | 100 | 125 | 150 | 200 | 250 | 300 | 400 | 500 | 600 |

| 40 | 1.34 | 1.51 | 1.68 | 1.85 | 2.02 | 2.19 | 2.53 | 2.87 | 3.21 | 3.89 | 4.57 | - |
| 50 | 2.07 | 2.31 | 2.55 | 2.79 | 3.03 | 3.27 | 3.75 | 4.23 | 4.71 | 5.66 | 6.62 | 7.58 |
| 63 | 3.00 | 3.30 | 3.60 | 3.91 | 4.21 | 4.51 | 5.12 | 5.72 | 6.33 | 7.54 | 8.75 | 9.96 |

## Allowable Load at Rod End

- A case where the center of gravity of the load rests 50 mm from the rod end.

## Allowable Kinetic Energy

(Supply pressure: at P 0.5 MPa )

## Series HYC

## Construction

## Built-in magnet

Component Parts

| No. | Description | Material | Qty. | Note |  |
| :---: | :--- | :---: | :---: | :---: | :---: |
| $\mathbf{1}$ | Rod cover | Aluminum alloy | 1 | Anodic oxide film |  |
| $\mathbf{2}$ | Head cover | Aluminum alloy | 1 | Anodic oxide film |  |
| $\mathbf{3}$ | Cylinder tube | Aluminum alloy | 1 | Anodic oxide film |  |
| $\mathbf{4}$ | Piston rod | Stainless steel | 1 | Hard chromium plated |  |
| $\mathbf{5}$ | Piston | Aiuminum alloy | 1 | Chromated |  |
| $\mathbf{6}$ | Bushing | Resin | 1 |  |  |
| $\mathbf{7}$ | Bushing retainer | Aluminum alloy | 1 | Chromated |  |
| $\mathbf{8}$ | Magnet holder | Aluminum alloy | 1 | Chromated |  |
| $\mathbf{9}$ | Rod end nut | Stainless steel | 1 |  |  |
| $\mathbf{1 0}$ | Cushion ring | Steel | 2 | Zinc chromated |  |
| $\mathbf{1 1}$ | Piston nut | Stainless steel | 1 |  |  |
| $\mathbf{1 2}$ | Spring washer | Steel | 1 |  |  |
| $\mathbf{1 3}$ | Rod scraper | NBR | 1 | (FKM can be selected.) |  |
| $\mathbf{1 4}$ | Wearing | Resin | 1 |  |  |
| $\mathbf{1 5}$ | Cushion seal | Resin | 2 |  |  |
| $\mathbf{1 6}$ | Rod seal | NBR | 1 | (FKM can be selected.) |  |
| $\mathbf{1 7}$ | Piston seal | NBR | 1 |  |  |
| $\mathbf{1 8}$ | Cylinder tube gasket | NBR | 2 | (FKM can be selected.) |  |
| $\mathbf{1 9}$ | Piston gasket | NBR | 1 |  |  |
| $\mathbf{2 0}$ | Tie-rod bolt | Stainless steel | 8 |  |  |
| $\mathbf{2 1}$ | Needle scraper | NBR | 2 | (FKM can be selected.) |  |
|  |  |  |  |  |  |

| No. | Description | Material | Qty. | Note |
| :---: | :--- | :---: | :---: | :---: |
| $\mathbf{2 2}$ | Magnet | Resin | 2 | (Only built-in magnet) |
| $\mathbf{2 3}$ | Switch rail base | Stainless steel | 2 | (Only built-in magnet) |
| $\mathbf{2 4}$ | Hexagon bolt | Stainless steel | 2 | (Only built-in magnet) |
| $\mathbf{2 5}$ | Switch rail | Stainless steel | 1 | (Only built-in magnet) |

## Replacement Parts: Seal Kit

| Bore Size | Part no. | Set contents |
| :---: | :---: | :---: |
| 32 | HYCB32■-PS | (15) Cushion seal (2 pcs.) <br> (16) Rod seal (1 pc.) <br> (17) Piston seal (1 pc.) <br> (18) Tube gaskets (2 pcs.) <br> (21) Needle scraper (2 pcs.) |
| 40 | HYCB40ロ-PS |  |
| 50 | HYCB50■-PS |  |
| 63 | HYCB63■-PS |  |

Place the seal material symbol in $\square$.

| Symbol | Material |
| :---: | :---: |
| $\mathbf{R}$ | NBR |
| $\mathbf{H}$ | External FKM $^{*}$ |

* Extemal seal: Rod seal, tube gasket and needle scraper are made from FKM.

Note) The above values are a guide in the stroke end detection of the mounting position of the auto switch. Please adjust in an actual setting after confirming the operating state of the auto switch.

## Operating Range

| Unit: Operating range $[\mathrm{mm}]$ |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Auto switch <br> model | Series | Bore size |  |  |  |  |  |  |  |  |  |  |
|  |  | $\mathbf{2 5}$ | $\mathbf{3 2}$ | $\mathbf{4 0}$ | $\mathbf{5 0}$ | $\mathbf{6 3}$ |  |  |  |  |  |  |
| D-F6 | HYQ | 7 | 6 | 7.5 | 7.5 | 7.5 | 7.5 |  |  |  |  |  |
|  | HYC | - | - | 7.5 | 7.5 | 7.5 | 7.5 |  |  |  |  |  |
|  | HYG | 7 | 7 | 8 | 7.5 | 7.5 | 7.5 |  |  |  |  |  |

Note) Since this is a guideline including hysteresis, it is not meant to be guaranteed.
There may be substantial variation depending on the surrounding environment (assurning approximately $\pm 50 \%$ dispersion).

Minimum Stroke of Auto Switch Mounting

| Auto switch model | Series | 1 pc. | 2 pcs. |
| :---: | :---: | :---: | :---: |
| D-F6 | HYQ, HYC | 5 | 10 |
|  | HYG | 10 | 15 |

## Auto Switch Mounting (HYQ, HYC, HYG common)

## Proper tightening torque

When the mounting screw is tightened, use a special tool or torque wrench The tightening torque of the M3 mounting screw should be 0.8 to $.4 \mathrm{~N} \cdot \mathrm{~m}$.

Tighten the screw within the following torque range when the auto switch mounting rail is installed during maintenance.

| Screw size | Tightening torque $(\mathrm{N} \cdot \mathrm{m})$ |
| :---: | :---: |
| M4 | 1.1 to 1.9 |

Tighten the screw within the following torque range when the auto switch is installed on the mounting rail.

| Tightening torque $(\mathrm{N} \cdot \mathrm{m})$ |
| :---: |
| 0.8 to 1.4 |

## Mounting Brackets

## Foot Bracket

## HYB

| Foot bracket material: Stainless steel |  |  |  |  |  |  |  |  |  |  |  |  |  |

# Auto Switch Specifications 

## Specifications

| Type | Solid state switch |
| :--- | :---: |
| Leakage current | 3-wire: $100 \mu \mathrm{~A}$ or less 2-wire: 0.8 mA or less |
| Operating time | 1 ms or less |
| Impact resistance | $1000 \mathrm{~m} / \mathrm{s}^{2}$ |
| Insulation resistance | $50 \mathrm{M} \Omega$ or more at $500 \mathrm{VDC} \mathrm{Mega} \mathrm{(between} \mathrm{lead} \mathrm{wire} \mathrm{and} \mathrm{case)}$ |
| Withstand voltage | 1000 VAC for 1 minute (between lead wire and case) |
| Ambient temperature | -10 to $60^{\circ} \mathrm{C}$ |
| Enclosure | IEC529 standard IP67, JIS C 0920 waterproof construction |

## Hysteresis

Hysteresis is the distance between the position at which piston movement operates an auto switch and the position at which reverse movement turns the switch off. This hysteresis is included in a part of the operating range (one side).

## Lead Wire Length

Lead wire length indication
(Example)

| Nil | 0.5 m |  |
| :---: | ---: | :---: |
| $\mathbf{L}$ | 3 m |  |
| $\mathbf{Z}$ | 5 m |  |

Note 1) Applicable auto switch with 5 m lead wire " $Z$ "
Solid state switch: All types are manufactured upon receipt of order (as standard).
Note 2) The standard lead wire length of solid state switch with water resistant 2 -color indication is 3 meters. ( 0.5 m is not available.)

Basic Wiring

Solid state 3-wire, NPN

Solid state 3-wire, PNP

2-wire

(The switch power supply and the load power supply are another cases )

## Example of Connection to PLC

## Example of AND (Series) and OR (Parallel) Connection

- 3-wIre

AND connection tor NPN output (using relays)

2-wire with 2 switches AND connection

vorien two switches are curl heicted in serles, a IGad rilay milaluriction because the load voltaye will deciline wherl in the UIV state. Ine inalcator ilghts vill ighit up it both ot the suvituries are in the UN state.
L. uad voltaye al UIN - $\begin{gathered}\text { Power supply } \\ \text { voltage }\end{gathered} \begin{gathered}\text { Internal } \\ \text { vultage drop }\end{gathered} \times 2 \mu \mathrm{No}$

$-10 \mathrm{~V}$
Example: Power supply voltage is ¿ 24 V LU Internal vultaye arop in switun is 4 v .

AND connection tor NPN output (performed with switches only)

Connect according to the applicable PLC input specifications, since the commection method will vary depending on the PLC input specifications.

Irie indicatur lights will illurniriate whiell both swalturies ale turned UN.

## 2-wire with 2 switches OR connection

$$
-\quad \| 1 A \times 2 \mu v 0 \times 3 k \Omega
$$

$$
-6 \mathrm{~V}
$$

EXample: Loda inupedance is 3 kS
Leakaye current trum switch is 1 mi.

## Solid State Switch: Direct Mounting Style D-F6N/D-F6P/D-F6B

## Grommet

- 2-wire load current is reduced ( 2.5 to 40 mA )
- UL certified (style 2844) lead cable is used
- For RoHS

## ©Caution

Operating Precautions
Fix the switch with the existing screw installed on the switch body. The switch may be darmayed it a sciew other than the orie supplied, is used.

Auto Switch Internal Circuit

## Safety Instructions

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by labels of "Caution", "Warning" or "Danger". To ensure safety, be sure to observe ISO 4414 Note 1), JIS B 8370 Note 2) and other safety practices.

## Explanation of the Labels

| Labels | Explanation of the labels |
| :---: | :---: |
| 4. Danger | In extreme conditions, there is a possible result of serious injury or loss of life. |
| \! Warning | Operator error could result in serious injury or loss of life. |
| \ Caution | Operator error could result in injury ${ }^{\text {Note 3) }}$ or equipment damage. ${ }^{\text {Note 4) }}$ |

Note 1) ISO 4414: Pneumatic fluid power - General rules relating to systems
Note 2) JIS B 8370: General Rules for Pneumatic Equipment
Note 3) Injury indicates light wounds, burns and electrical shocks that do not require hospitalization or hospital visits for long-term medical treatment.
Note 4) Equipment damage refers to extensive damage to the equipment and surrounding devices.

## Selection/Handling/Applications

1. The compatibility of the pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.
Since the products specified here are used in various operating conditions, their compatibility for the specific pneumatic system must be based on specifications or post analysis and/or tests to meet the specific requirements. The expected performance and safety assurance are the responsibility of the person who has determined the compatibility of the system. This person should continuously review the suitability of all items specified, referring to the latest catalog information with a view to giving due consideration to any possibility of equipment failure when configuring a system.
2. Only trained personnel should operate pneumatically operated machinery and equipment.

Compressed air can be dangerous if handled incorrectly. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced operators. (Understanding JIS B 8370 General Rules for Pneumatic Equipment, and other safety rules are included.)
3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.

1. Inspection and maintenance of machinery/equipment should only be performed once measures to prevent falling or runaway of the driver objects have been confirmed.
2. When equipment is removed, confirm that safety process as mentioned above. Turn off the supply pressure for this equipment and exhaust all residual compressed air in the system, and release all the energy (liquid pressure, spring, condenser, gravity).
3. Before machinery/equipment is restarted, take measures to prevent quick extension of a cylinder piston rod, etc.
4. Contact SMC if the product will be used in any of the following conditions:
5. Conditions and environments beyond the given specifications, or if product is used outdoors.
6. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, clutch and brake circuits in press applications, or safety equipment.
7. An application which has the possibility of having negative effects on people, property, or animals, requiring special safety analysis.
8. If the products are used in an interlock circuit, prepare a double interlock style circuit with a mechanical protection function for the prevention of a breakdown. And, examine the devices periodically if they function normally or not.

## Exemption from Liability

1. SMC, its officers and employees shall be exempted from liability for any loss or damage arising out of earthquakes or fire, action by a third person, accidents, customer error with or without intention, product misuse, and any other damages caused by abnormal operating conditions.
2. SMC, its officers and employees shall be exempted from liability for any direct or indirect loss or damage, including consequential loss or damage, loss of profits, or loss of chance, claims, demands, proceedings, costs, expenses, awards, judgments and any other liability whatsoever including legal costs and expenses, which may be suffered or incurred, whether in tort (including negligence), contract, breach of statutory duty, equity or otherwise.
3. SMC is exempted from liability for any damages caused by operations not contained in the catalogs and/or instruction manuals, and operations outside of the specification range.
4. SMC is exempted from liability for any loss or damage whatsoever caused by malfunctions of its products when combined with other devices or software.

Series HY $\square$
Auto Switch Precautions 1
Be sure to read this before handling.

## Caution on Design / Selection

## $\triangle$ Warning

## 1. Confirm the specifications.

Read the specifications carefully and use this product appropriately. The product may be damaged or malfunction if it is used outside the range of specifications of current load, voltage, temperature or impact. We do not guarantee any damage in any case the product is used outside of the specification range.
2. Pay attention to the length of time that a switch is on at an intermediate stroke position.
When an auto switch is placed at an intermediate position of the stroke and a load is driven at the time the piston passes, the auto switch will operate, but if the speed is too great, the operating time will be shortened and the load may not operate properly. The maximum detectable piston speed is:

$$
\mathrm{V}(\mathrm{~mm} / \mathrm{s})=\frac{\text { Auto switch operating range }(\mathrm{mm})}{\text { Load operating time }(\mathrm{ms})} \times 1000
$$

3. Keep wiring as short as possible.
<Solid state switch>
Although wire length should not affect switch function, use a wire that is 100 m or shorter.
4. Do not use a load that generates surge voltage. If a surge voltage is generated, the discharge occurs at the contact, possibly resulting in the shortening of product life.
<Solid state switch>
Although a zener diode for surge protection is connected at the output side of a solid state auto switch, damage may still occur if a surge is applied repeatedly. When directly driving a load which generates surge, such as a relay or solenoid valve, use a type of switch with a built-in surge absorbing element.

## 5. Cautions for use in an interlock circuit

When an auto switch is used for an interlock signal requiring high reliability, devise a double interlock system to safeguard against malfunctions by providing a mechanical protection function, or by also using another switch (sensor) together with the auto switch. Also perform periodic inspection and confirm proper operation.
6. Do not repair, diassemble, or make any modifications to the product, including changes in the printed circuit board, as this may result in injury or an accident.

## ©Caution

## 1. Take precautions when multiple cylinders (actuators) are used close together.

When two or more auto switch cylinders (actuators) are lined up in close proximity to each other, magnetic field interference may cause the switches to malfunction. Maintain a minimum cylinder separation of 40 mm . (When the allowable interval is specified for each cylinder series, use the indicated value.)

## 2. Take precautions for the internal voltage drop of the switch.

- If auto switches are connected in series as shown below, take note that there will be a large voltage drop because of internal resistance in the light emitting diodes. (Refer to internal voltage drop in the auto switch specifications.)
[The voltage drop will be " n " times larger when " n " auto switches are connected.]
Even though an auto switch operates normally, the load may not operate.

- Similarly, when operating below a specified voltage, it is possible that the load may be ineffective even though the auto switch function is normal. Therefore, the formula below should be satisfied after confirming the minimum operating voltage of the load.

| Supply |
| :--- |
| voltage |$-$| Internal voltage |
| :--- |
| drop of switch |$>$| Minimum operating |
| :--- |
| voltage of load |

<Solid state switch>
Generally, the internal voltage drop will be great with a 2 wire solid state auto switch.
Also, note that a 12 VDC relay is not applicable.

## 3. Pay attention to leakage current.

<Solid state switch>
With a 2-wire solid state auto switch, current (leakage current) flows to the load to operate the internal circuit even when in the OFF state.

Current to operate load $>$| Leakage |
| :--- |
| current | (OFF condition)

If the condition given in the above formula is not met, it will not reset correctly (stays ON). Use a 3-wire switch if this specification cannot be satisfied.
Moreover, leakage current flow to the load will be " $n$ " times larger when " $n$ " auto switches are connected in parallel.

## 4. Ensure sufficient clearance for maintenance activities.

When designing an application, be sure to allow sufficient clearance for maintenance and inspections.

Series HY $\square$
Auto Switch Precautions 2
Be sure to read this before handling.

## Mounting and Adjustment

## $\triangle$ Warning

## 1. Instruction manual.

Install the products and operate them only after reading the instruction manual carefully and understanding its contents. Also keep the manual where it can be referred to as necessary.

## 2. Do not drop or bump.

Do not drop, bump or apply excessive impacts ( $1000 \mathrm{~m} / \mathrm{s}^{2}$ or greater for solid state switches) while handling.
Although the body of the switch may not be damaged, the inside of the switch could be damaged and cause a malfunction.
3. Mount switches using the proper tightening torque.
When a switch is tightened above the torque specification, the mounting screws, or switch may be damaged. On the other hand, tightening below the torque specification may allow the switch to slip out of position. (Refer to switch mounting for each series regarding switch mounting, moving, and fastening torque, etc.)
4. Mount a switch at the center of the operating range.
Adjust the mounting position of an auto switch so that the piston stops at the center of the operating range (the range in which a switch is ON). (The mounting positions shown in the catalog indicate the optimum position at the stroke end.) If mounted at the end of the operating range (around the borderline of ON and OFF), operation will be unstable.

## 5. Secure the space for maintenance.

When installing the products, please allow access for maintenance.

## $\triangle$ Caution

1. Do not carry an actuator by the auto switch lead wires.
Never carry a cylinder by its lead wires. This may not only cause broken lead wires, but it may cause internal elements of the switch to be damaged by the stress.
2. Fix the switch with the appropriate screw installed on the switch body. If using other screws, switch may be damaged.

## Wiring

## © Warning

## 1. Confirm proper insulation of wiring.

Be certain that there is no faulty wiring insulation (such as contact with other circuits, ground fault, improper insulation between terminals, etc.). Damage may occur due to excess current flow into a switch.
2. Do not wire in conjunction with power lines or high voltage lines.
Wire separately from power lines or high voltage lines, avoiding parallel wiring or wiring in the same conduit with these lines. Control circuits containing auto switches may malfunction due to noise from these lines.

Wiring

## $\triangle$ Caution

## 1. Avoid repeatedly bending or stretching lead wires. <br> Broken lead wires will result from repeatedly applying bending stress or stretching force to the lead wires.

2. Be sure to connect the load before power is applied.
<2-wire type>
If the power is turned ON when an auto switch is not connected to a load, the switch will be instantly damaged because of excess current.

## 3. Do not allow short circuit of loads. <br> <Solid state switch>

F6 $\square$ does not have built-in short circuit protection circuits. If loads are short circuited, the switches will be instantly damaged, as in the case of reed switches.
Take special care to avoid reverse wiring with the brown power supply line and the black output line on 3-wire type switches.

## 4. Avoid incorrect wiring.

<Solid state switch>
If connections are reversed on a 2-wire type switch, the switch will not be damaged if protected by a protection circuit, but the switch will always stay in an ON state. However, it is still necessary to avoid reversed connections, since the switch could be damaged by a load short circuit in this condition.

## <F6 $\square>$

D-F6 $\square$ does not have built-in short circuit protection circuit. Be aware that if the power supply connection is reversed (e.g. (+) power supply wire and (-) power supply wire connection is reversed), the switch will be damaged.
5. When the cable sheath is stripped, confirm the stripping direction. The insulator may be split or damaged depending on the direction. (D-F6 $\square$ )

Auto Switch Precautions 3
Be sure to read this before handling.

## Operating Environment

## . Warning

1. Never use in an atmosphere of explosive gases.

The construction of the auto switch is not intended to prevent explosion. Never use in an atmosphere with an explosive gas since this may cause a serious explosion.
2. Do not use in an area where a magnetic field is generated.
The auto switch will malfunction or the magnets inside of an actuator will become demagnetized if used in such an environment.
3. Do not use in an environment where the auto switch will be continually exposed to water.
The switch satisfies the IEC standard IP67 construction (JIS C 0920: waterproof construction). Nevertheless, it should not be used in applications where it is continually exposed to water splash or spray. This may cause deterioration of the insulation or swelling of the potting resin inside switch causing a malfunction.
4. Do not use in an environment with oil or chemicals.
Consult with SMC if the auto switch will be used in an environment with coolant, cleaning solvent, various oils or chemicals. If the auto switch is used under these conditions for even a short time, it may be adversely effected by a deterioration of the insulation, a malfunction due to swelling of the potting resin, or hardening of the lead wires.
5. Do not use in an environment with temperature cycles.
Consult with SMC if the switch is used where there are temperature cycles other than normal temperature changes, as they may adversely affected the switch internally.
6. Do not use in an area where surges are generated.
<Solid state switch>
When there are units (such as solenoid type lifters, high frequency induction furnaces, motors, etc.) that generate a large amount of surge in the area around an actuator with a solid state auto switch, their proximity or pressure may cause deterioration or damage to the internal circuit of the switch. Avoid sources of surge generation and crossed lines.

## $\triangle$ Caution

1. Avoid accumulation of iron debris or close contact with magnetic substances.
When a large accumulated amount of ferrous waste such as machining chips or welding spatter, or a magnetic substance (something attracted by a magnet) is brought into close proximity to an cylinder with auto switches, this may cause the auto switches to malfunction due to a loss of the magnetic force inside the cylinder.
2. Contact SMC for the water resistance ability, the elasticity ability of the lead wire, and the welding site etc.
3. Do not expose the product to direct sunlight for an extended period of time.
4. Do not use the product in locations where it is exposed to radiant heat.

## © Warning

1. Perform the following maintenance periodically in order to prevent possible danger due to unexpected auto switch malfunction.
1) Securely tighten switch mounting screws.

If screws become loose or the mounting position is dislocated, retighten them after readjusting the mounting position.
2) Confirm that there is no damage to the lead wires. To prevent faulty insulation, replace switches or repair lead wires, etc., if damage is discovered.
2. Perform the maintenance procedures outlined in the instruction manual.
If the maintenance procedures are performed improperly, malfunction or damage to the machinery or equipment may occur.

## 3. Removal of equipment, and supply/exhaust

 of compressed air.When an equipment is serviced, first confirm that measures are in place to prevent workpieces from dropping run-away equipment, etc. Then cut the supply pressure and power, and exhaust all compressed air from the system using the residual pressure release function.
When the equipment is operated after remounting or replacement, first confirm that measures are in place to prevent lurching of actuators, etc. Then confirm that the equipment is operating normally.

SMC

Be sure to read this before handling.
Please refer to the back of page 1 to 4 for Safety Instruction and Auto Switch Precautions.

## Caution on Design

## $\triangle$ Caution

1. Speed adjustment should be conducted in the environment where the cylinder is used.
In a different environment, the speed adjustment may be incorrect.
2. There are possibilities that dust may accumulate by the usage condition in the thread part and brackets for mounting of this products.
Do measures according to the usage condition when you mount it.

## Operating Environment

## $\triangle$ Caution

1. Avoid installing and using a cylinder inside a food zone.
<Not installable>
Food zone ............. An environment where food which will be sold as merchandize, directly touches the cylinder's components.
<Installable>
Splash zone ........... An environment where food which will not be sold as merchandize, directly touches the cylinder's components.
Non-food zone ........ An environment where there is no contact with food.

2. When a detergent or chemical liquid other than water is splashed on the cylinder, the cylinder's service life may be substantially shortened. Please contact us for details.
3. When washing a cylinder with steam, please observe the allowable temperature range of the cylinder and perform for a short period of time.
4. When washing a cylinder with a brush, etc., please do not apply excessive force to the auto switch's lead wire, etc.

## Mounting

## © Warning

1. Do not put hands or fingers, etc. between the plate and body. [Series HYG]
Care should be taken that hands or fingers do not get caught in between the cylinder body and the plate when air pressure is applied.

## $\triangle$ Caution

1. Design the aptitude enough by thinking about the rigidity of mount because the cylinder puts out big power.
2. Tighten in following tightening torque when you install the auto switch rail when repairing it.

| Thread size | Tightening torque $(\mathrm{N} \cdot \mathrm{m})$ |
| :---: | :---: |
| M 4 | 1.1 to 1.9 |

3. Do not apply any force to lead wires when auto switch is mounted on cylinder.
Never apply any force to lead wires. This may not only cause broken lead wires, but it may cause internal elements of the switch to be damaged by the stress. Moreover, the switch might not operate when force applys to the lead wire and the distance between the switch and the cylinder become long.
4. Pay attention to magnetic substance density between the auto switch and the cylinder body and the circumference.
When a magnetic substance is brought into close proximity with an auto switch and cylinder, it may cause the auto switch to malfunction due to a loss of the magnetic force inside the cylinder.
5. When the cylinder, the support bracket and the plug bolt are mounted, tighten them within below tightening torque. [Series HYB]

| Bore size | Thread size | Tightening torque (N•m) |
| :---: | :---: | :---: |
| $\varnothing 20$ | $\mathrm{M} 4 \times 0.7$ | 1.1 to 1.9 |
| $\varnothing 25, \varnothing 32$ | $\mathrm{M} 5 \times 0.8$ | 2.1 to 3.9 |
| $\varnothing 40$ | $\mathrm{M} 6 \times 1$ | 3.7 to 6.7 |
| $\varnothing 50$ | $\mathrm{M} 8 \times 1.25$ | 8.8 to 16.2 |
| $\varnothing 63, \varnothing 80$ | $\mathrm{M} 10 \times 1.5$ | 17.2 to 31.8 |
| $\varnothing 100$ | $\mathrm{M} 12 \times 1.75$ | 29.4 to 54.6 |

# Specific Product Precautions 2 

Be sure to read this before handling.
Please refer to the back of page 1 to 4 for Safety Instruction and Auto Switch Precautions.

## Mounting

## $\triangle$ Caution

[Series HYC]

| Bore size | Thread size | Tightening torque (N•m) |
| :---: | :---: | :---: |
| $\varnothing 32,40$ | $\mathrm{M} 6 \times 1$ | 3.7 to 6.7 |
| $\varnothing 50,63$ | $\mathrm{M} 8 \times 1.25$ | 8.8 to 16.2 |

6. When the cylinder, the support bracket and the external cover are mounted, tighten them within below tightening torque. [Series HYQ]

| Bore size | Thread size | Tightening torque (N•m) |
| :---: | :---: | :---: |
| $\varnothing 20$ | $\mathrm{M} 5 \times 0.8$ | 2.1 to 3.9 |
| $\varnothing 25,32,40$ | $\mathrm{M} 6 \times 1$ | 3.7 to 6.7 |
| $\varnothing 50,63$ | $\mathrm{M} 8 \times 1.25$ | 8.8 to 16.2 |

7. When the cylinder, the plug bolt and the load are mounted, tighten within below tightening torque. [Series HYG]
Top Mounting

| Bore size | Thread size | Tightening torque (N•m) |
| :---: | :---: | :---: |
| $\varnothing 20,25$ | $\mathrm{M} 5 \times 0.8$ | 2.1 to 3.9 |
| $\varnothing 32,40$ | $\mathrm{M} 6 \times 1$ | 3.7 to 6.7 |
| $\varnothing 50,63$ | $\mathrm{M} 8 \times 1.25$ | 8.8 to 16.2 |

Lower Side Mounting

| Bore size | Thread size | Tightening torque (N•m) |
| :---: | :---: | :---: |
| $\varnothing 20,25$ | $\mathrm{M} 6 \times 1$ | 3.7 to 6.7 |
| $\varnothing 32,40$ | $\mathrm{M} 8 \times 1.25$ | 8.8 to 16.2 |
| $\varnothing 50,63$ | $\mathrm{M} 10 \times 1.5$ | 17.2 to 31.8 |

## © Caution

Bottom Mounting or Load Mounting

| Bore size | Thread size | Tightening torque (N•m) |
| :---: | :---: | :---: |
| $\varnothing 20$ | $\mathrm{M} 5 \times 0.8$ | 2.1 to 3.9 |
| $\varnothing 25$ | $\mathrm{M} 6 \times 1$ | 3.7 to 6.7 |
| $\varnothing 32,40$ | $\mathrm{M} 8 \times 1.25$ | 8.8 to 16.2 |
| $\varnothing 50,63$ | $\mathrm{M} 10 \times 1.5$ | 17.2 to 31.8 |

Plug Bolt Mounting (Optional)

| Thread size | Tightening torque $(\mathrm{N} \cdot \mathrm{m})$ |
| :---: | :---: |
| $\mathrm{M} 5 \times 0.8$ | 2.1 to 3.9 |
| $\mathrm{M} 6 \times 1$ | 3.7 to 6.7 |
| $\mathrm{M} 8 \times 1.25$ | 8.8 to 16.2 |
| $\mathrm{M} 10 \times 1.5$ | 17.2 to 31.8 |

8. Install the load when the piston rod is retracted. [Series HYG]
The twist occurs in the guide part if the load is installed on the plate when the piston rod is extended, and it causes the malfunction.

## Lubrication

## $\triangle$ Caution

1. Lubrication of Hygienic Design Cylinder (standard grease use goods).
This unit can be operated without lubrication. If lubrication is performed, build in the lubricator in the circuit, use turbine oil Class 1 (with no additives) ISO VG32.
Moreover, the malfunction will occur if the lubrication is discontinued on the way because the disappearance of the initial lubrication part. Lubricate without fail continuously. Consult with SMC if other lubricant are used.

## Series HY $\square$

Be sure to read this before handling.
Please refer to the back of page 1 to 4 for Safety Instruction and Auto Switch Precautions.

## Lubrication

## $\triangle$ Caution

## 2.Lubrication to Hygienic Design Cylinder (food compatible grease use goods). <br> If this unit is lubricated, it might cause the malfunction. Moreover, when a grease out of specification is used, it causes the malfunction. <br> - Place a purchase order with the following model number when only the grease for maintenance is necessary. Standard grease (for non-food) GR-S-010 (10 g) <br> Food compatible grease GR-H-010 (10 g)

3. Do not wipe off the grease adhering to the sliding part of the air cylinder.
It might cause the malfunction when compulsorily peeling off the adhering grease to the sliding parts. If the cylinder operates the long distance, the sliding parts might become black. In that case, the actuation becomes possible for a long term when the grease of the sliding parts is wiped off once, and it greases it again.
(Wipe off by water. If alcohol and a special solvent are used, the seal might be damaged.)

## Cushion (HYC)

## $\triangle$ Caution

1. Readjust with the cushion needle.

Readjust the cushion needle installed in the cover according to the load size and the operating speed before use, though it is adjusted to near the fully closed states when it ships. When the cushion adjuster is rotated to clockwise, the throttle strengthens becomes tight and the cushion strengthens will be good.
2. Do not use the cushion needle for a long term in the fully closed states.
It causes the damage of the seal.
3. Torque to the cushion adjuster should be below of the following torque when the cushion needle is adjusted.

| Tightening torque $(\mathrm{N} \cdot \mathrm{m})$ |
| :---: |
| 0.5 |

Do not exceed the torque mentioned above. Otherwise it causes the damage.
4. Do not exceed the adjustable range of cushion needle.
If cushion needle is rotated with the torque over adjustable range, it causes the damage.

| Bore size | Rotations |
| :---: | :---: |
| $\varnothing 32,40$ | 4 or less |
| $\varnothing 50,63$ | 5 or less |

## Piping

## $\triangle$ Caution

1. This product might be damaged if the compressed air is supplied to the breathing port for guide, so do not supply it. [Series HYG]

<Example>

- Piping is connected in the breathing port on guide, breathing at general environment is possible.

2. Plug piping ports and breathing port on guide according to the operating conditions. [Series HYG]

Piping Port

| Bore size | Plug thread <br> size | Plug width <br> across flats | Tightening torque <br> $(\mathrm{N} \cdot \mathrm{m})$ |
| :---: | :---: | :---: | :---: |
| $\varnothing 20,25$ | M5 | 8 | After tightening by <br> hand, tighten1/6 turn. |
| $\varnothing 32,40$ | $1 / 8$ | 13 | 7 to 9 |
| $\varnothing 50,63$ | $1 / 4$ | 16 | 12 to 14 |

Breathing Port for Guide

| Bore size | Plug thread <br> size | Plug width <br> across flats | Tightening torque <br> $(\mathrm{N} \cdot \mathrm{m})$ |
| :---: | :---: | :---: | :---: |
| $ø 20$ to $ø 63$ | M5 | 8 | After tightening by <br> hand, tighten1/6 turn. |

3. Use the piping tube installed in the breathing port for guide is more than $\varnothing 4$ in bore size and within 3 m in length, otherwize the cylinder piston speed might decrease.

# Series HY $\square$ Specific Product Precautions 4 

Be sure to read this before handling.
Please refer to the back of page 1 to 4 for Safety Instruction and Auto Switch Precautions.

## Caution on Handling

## $\triangle$ Caution

1 If the sliding parts is washed, the grease will wash out and the service life will be shorten, keep washing at a minimum.
2. Plug up unnecessary mounting holes with plug bolts or external cover (optional), etc., bacteria might grow if water gets in these holes.

## SMC Corporation

[^0]:    Note 1) Refer to page 32 for details about the rod end nut, mounting bracket and accessory bracket.

[^1]:    Note 1) The [ ] value denotes dimensions with the auto switch D-F6 $\square$ mounted, which is dedicated to the Hygienic Design Cylinder
    Note 2) Refer to page 32 for details about the rod end nut, mounting bracket and accessory bracket.
    Note 3) When the unit is iristalled, ensure that dirt does root collect in the rod end (threaded portion).

[^2]:    Note 1) Urie mountıng bracket is attacried with orie tout bracket and two mivunting bolts.
    Nute 2) Two foot brackets per cylirider should be ordered.
