C75 Series: $\varnothing 32$, $\varnothing 40$

Part numbers set for actuators with mounting brackets, rod end brackets and auto switches available.

Now it is not necessary to order a bracket and the applicable cylinder separately, which can save time.

Easy fine adjustment of auto switch position

Fine adjustment of the auto switch position is possible by simply loosening the screw attached to the auto switch.

Transparent switch bracket improves visibility of indicator LED.

Stroke Selection

Relationship between cylinder size and maximum stroke

The below table shows the applicable maximum stroke (in cm units), found by calculation assuming the case where the force generated by the cylinder itself acts as buckling force on the piston rod, or piston rod and cylinder tube. Therefore, it is possible to find the applicable maximum stroke for each cylinder size using the relationship between the size of the operating pressure and the cylinder support type, regardless of the load ratio.

[Reference] If it is stopped with the external stopper on the cylinder extension side, even with a light load, the maximum generated force of the cylinder will act on the cylinder itself.

The maximum stroke at which the cylinder can be operated under a lateral load

The region that does not exceed the bold solid line represents the allowable lateral load in relation to the cylinder of a given stroke length. In the graph, the range of the broken line shows that the long stroke limit has been exceeded. In this region, as a rule, operate the cylinder by providing a guide along the direction of movement.

⚠ Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <http://www.smcworld.com>

⚠ Caution

1. Avoid using the air cylinder in such a way that rotational torque would be applied to the piston rod.

To screw a bracket or a nut onto the threaded portion at the tip of the piston rod, make sure to retract the piston rod entirely, and place a wrench over the flat portion of the rod that protrudes.

Tighten it by giving consideration to prevent the tightening torque from being applied to the non-rotating guide.

⚠ Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <http://www.smcworld.com>

⚠ Caution

1. Avoid using the air cylinder in such a way that rotational torque would be applied to the piston rod.

If rotational torque is applied, the non-rotating guide will become deformed, thus affecting the non-rotating accuracy.

Refer to the table below for the approximate values of the allowable range of rotational torque.

Allowable rotational torque (N·m or less)	ø8	ø10	ø12	ø16	ø20	ø25
	0.02	0.04	0.2	0.25		

To screw a bracket or a nut onto the threaded portion at the tip of the piston rod, make sure to retract the piston rod entirely, and place a wrench over the flat portion of the rod that protrudes.

Tighten it by giving consideration to prevent the tightening torque from being applied to the non-rotating guide.

Square rod cover makes direct mounting possible

Space saving

Because it is a directly mounted type without using brackets, its overall length is shorter, and its installation pitch can be made smaller. Thus, the space that is required for installation has been dramatically reduced.

2 mounting types

Front side mounting and bottom side mounting available to suit your applications.

Square rod cover makes direct mounting possible

Space saving

Because it is a directly mounted type without using brackets, its overall length is shorter, and its installation pitch can be made smaller. Thus, the space that is required for installation has been dramatically reduced.

2 mounting types

Front side mounting and bottom side mounting available to suit your applications.

■ How to Mount and Move the Auto Switch

Mounting the Auto Switch

- Mount the auto switch mounting band around the auto switch setting position on the cylinder tube.
- Place the switch holder in the opening of the auto switch mounting band (1).
- Make the concave part of the switch bracket faced downward and set the switch bracket on the switch holder (2).
Set the switch bracket so that both ends of the auto switch mounting band enter the portion between the ribs on both side surfaces of the switch bracket.
For the D-M9□A(V) type auto switch, do not install the switch bracket on the indicator light.
- Pass the auto switch mounting screw (M3) supplied with the auto switch mounting band from the through-hole side of the auto switch mounting band and engage it with the M3 female thread of the switch bracket.
- Tighten the auto switch mounting screw with the specified tightening torque to secure the switch bracket and switch holder.

Tightening torque for auto switch mounting screw [N·m]

Cylinder series	Bore size [mm]	
	ø8 to ø16	ø20 to ø40
C85/C75	0.8 to 1.0	0.6 to 0.7

- Insert the auto switch into the auto switch mounting groove of the switch holder (2).
- After checking the detection position, tighten the set screw (M2.5) supplied with the auto switch to secure the auto switch.
At this time, the tightening torque for the set screw (M2.5) supplied with the auto switch must be 0.05 to 0.1 N·m.
When tightening the set screw supplied with the auto switch, use a watchmaker's screw driver with a handle diameter of 5 to 6 mm.

Adjusting the Auto Switch Position

- To make the fine adjustment, loosen the set screw (M2.5) supplied with the auto switch and slide the auto switch inside the auto switch mounting groove to adjust the position.
- To move the auto switch setting position largely, loosen the screw (M3) that secures the auto switch mounting band and slide the auto switch together with the switch holder on the cylinder tube to adjust the position.

■ How to Mount and Move the Auto Switch

- Put a mounting band on the cylinder tube and set it at the auto switch mounting position.
- Put the mounting section of the auto switch between the band mounting holes, then adjust the position of mounting holes of switch to those of mounting band.
- Lightly thread the auto switch mounting screw (M3) through the mounting hole into the thread part of band fitting.
- After setting the whole body to the detecting position by sliding, tighten the mounting screw (M3) to secure the auto switch while properly contacting the auto switch bottom part and the cylinder tube. (The tightening torque of M3 screw should be as below.)
ø8 to ø16: 0.8 to 1.0 N·m
ø20 to ø40: 0.6 to 1.0 N·m
- Modification of the detection position should be made in the condition of 3.
- After auto switch is mounted and fixed, attach a protective tube on the tip of an auto switch mounting screw (M3). (For ø8 to ø16)

Auto Switch Connections and Examples

Sink Input Specifications

3-wire, NPN

2-wire

Source Input Specifications

3-wire, PNP

2-wire

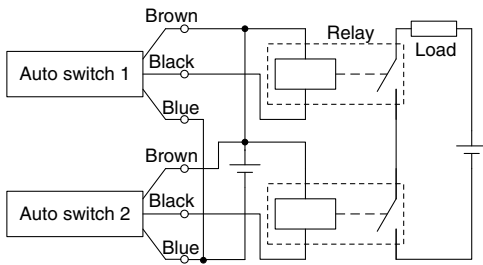

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

Examples of AND (Series) and OR (Parallel) Connections

* When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid.

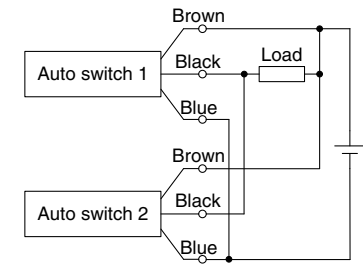

3-wire AND connection for NPN output (Using relays)

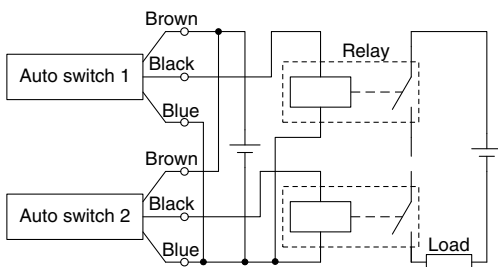

(Performed with auto switches only)

3-wire OR connection for NPN output

3-wire AND connection for PNP output (Using relays)

(Performed with auto switches only)

3-wire OR connection for PNP output

2-wire AND connection

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with a load voltage less than 20 V cannot be used.

$$\begin{aligned} \text{Load voltage at ON} &= \text{Power supply voltage} - \text{Residual voltage} \times 2 \text{ pcs.} \\ &= 24 \text{ V} - 4 \text{ V} \times 2 \text{ pcs.} \\ &= 16 \text{ V} \end{aligned}$$

Example: Power supply is 24 VDC
Internal voltage drop in auto switch is 4 V.

2-wire OR connection

(Solid state)
When two auto switches are connected in parallel, malfunction may occur because the load voltage will increase when in the OFF state.

(Reed)
Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

$$\begin{aligned} \text{Load voltage at OFF} &= \text{Leakage current} \times 2 \text{ pcs.} \times \text{Load impedance} \\ &= 1 \text{ mA} \times 2 \text{ pcs.} \times 3 \text{ k}\Omega \\ &= 6 \text{ V} \end{aligned}$$

Example: Load impedance is 3 k Ω .
Leakage current from auto switch is 1 mA.
