**Potential amplitude:** 25 V or less

Rapid neutralization of static electricity: Fastest time: 0.1 seconds

---

**Dual AC type IZS42 Series**

Potential amplitude of the workpiece is reduced with Dual AC type.

**Feedback sensor type IZS41 Series**

Rapid neutralization of static electricity by a feedback sensor

**Standard type IZS40 Series**

Simple operation: Can be controlled by powering the ionizer ON.

---

Note 1) IZS42, Installation height: 300 mm  
Note 2) Conditions/With feedback sensor, Discharge time from 1000 V to 100 V  
Discharged object: Charged plate (150 mm x 150 mm, capacitance 20 pF)  
Installation distance: 200 mm (Tungsten electrode needle with air purge)
IZS40/41/42 Series

**Dual AC type IZS42 Series** (Potential amplitude reduction specification)

**Potential amplitude: 25 V or less 80% reduction compared to the current model**
(Compared to the IZS31 series at the installation height of 300 mm)

Potential amplitude is reduced with **SMC independent Dual AC type sensor**.
Static neutralization in consideration of damage to a device which is sensitive to electrostatic discharge (ESD) can be achieved.
Potential amplitude applied to the applicable workpiece is reduced even if it the workpiece is mounted within close proximity of the ionizer.

**Independent Dual AC type is implemented.**

**Dual AC type/IZS42**

Discharges + ions and − ions at the same time to allow the + and − ions to reach the workpiece evenly, thereby reducing the potential amplitude.

**AC type**

+ ion and − ion layers reach the workpiece alternately, which increases the potential amplitude.

**Standard type IZS40 Series**

**Simple operation: Can be controlled by powering the ionizer ON.**

Discharge time = **3.2 seconds (41% shortened)** when installed at long distance (1000 mm)

**Static neutralization data when voltage is reduced from 1000 V to 100 V.**

Conditions: Ion generation frequency 30 Hz  Supply pressure: 0.1 MPa
High speed static neutralization cartridge

**Neutralizing static electricity on a glass substrate**

Prevents the breakage of glass substrates due to the static electricity which is generated when the substrate is lifted from the surface plate.

**Neutralizing static electricity on an electric substrate**

Prevents the breakage of electric substrates due to the static electricity which is generated when the substrates are picked up after dicing.
Feedback sensor type **IZS41 Series** (High speed static neutralization specification)

Rapid neutralization of static electricity by a feedback sensor

The discharge speed has been increased by reading the workpiece's electrostatic potential by the feedback sensor (option) and continuously emitting ions with a reverse polarity.

**Run mode after static neutralization** (electrostatic potential: within ±30 V) can be selected.

- **Energy saving run mode** Stops generating ions after static neutralization to reduce power consumption.
- **Continuous static neutralization run mode** After static neutralization, the ionizer switches to AC mode. Continues to neutralize static electricity to make it approach 0 V even if the ion balance is within ±30 V.

**Continuous static neutralization run mode**

<table>

</table>

- **Sensing AC** Detects the polarity of a discharged object and measures the charged voltage.
- **Static neutralization completion**

- **Neutralizing static electricity on an electric substrate**
  - Prevents disconnection due to static electrification.
  - Prevents adhesion of dust.

- **Neutralizing static electricity on a glass substrate**
  - Prevents disconnection due to static electrification.
  - Prevents adhesion of dust.

- **Neutralizing static electricity on molded goods**
  - Prevents breakage due to adhesion and discharge.
  - Improves detachability of molded goods from a die.

**AC adapter power supply is available.**

- **e-con connector is used.**

- **Suitable for static neutralization of resin and rubber pieces (small parts).**
  - Trip-resistance during conveying
  - Prevents adhesion of dust.

- **Neutralizing static electricity on molded goods**
  - Improves detachability of molded goods from a die.
IZS40/41/42 Series

Reduction of adjustment and maintenance labor by auto balance sensor

**Built-in type (Standard)**
The sensor is installed within the ionizer body and may be mounted anywhere. The offset voltage (ion balance) in the static neutralization area is controlled so that the voltage is maintained at a constant value by monitoring the ions emitted from the ionizer using the ground line, and adjusting the + and - ion supply rate.

**Effect of autobalance sensor (Image)**

- **Built-in sensor OFF**
- **Built-in sensor ON**

Always controls offset voltage

- **Time**
- **Offset voltage (V)**

---

**High accuracy type (Option)**
- The ion balance near the workpiece is accurately adjusted.
- Reduces the variation in the offset voltage of the static neutralization area due to the effect from the installation height and disturbance.

**Auto balance sensor**
Measures the nearest offset voltage.

- **Workpiece**

---

**Low maintenance emitter cartridges are used.**

- Minimizes contamination of emitters by discharging compressed air at the surface of the emitters.

**2 types of emitter materials**

<table>

---

**IZS**

- **IZS40**
- **IZS41**
- **IZS42**
The mode can be selected from “Manual Run” mode which performs adjustment only when connected, and “Automatic Run” mode which always performs adjustment while connected.

Effect of autobalance sensor (Image)

Sensor not connected
Always controls offset voltage around workpieces

Sensor connected

Setting ionizer with remote controller
- May be used to adjust and set several ionizers remotely.
- Can recognize and control up to 16 ionizers through address setting.
- Frequency setting
- Offset voltage adjustment
- Maintenance detection alarm level can be adjusted (3 levels).
- Built-in sensor valid/invalid may be selected.

Transition wiring may be used.
Total number of ionizers that may be connected IZS41: Max. 8 units. IZS42: Max. 5 units.
<Conditions> Bar length 340 to 2500 mm, Power supply cable 3 m, Transition wiring cable 2 m
Reduces man hours required for connecting wires to the power supply.

Safety functions
- Emitter cartridge drop prevention function
  Locking by double-action

- Drop prevention cover
  Can even more reliably prevent emitter cartridges from dropping off.

High speed static neutralization cartridges and energy saving static neutralization cartridges are available.

High speed de-ionizing cartridge
Ions are transferred to the workpieces efficiently by using two pneumatic nozzles to improve the static neutralization performance.

Energy saving type de-ionizing cartridge
The flow rate consumption of the energy-saving static neutralization cartridge is approximately 50% less than that of the high speed static neutralization cartridge.
The discharge speed is reduced by approximately 20 to 30%.

Application Examples

Neutralizing static electricity from films
- Prevents adhesion of dust. - Prevents winding failure due to wrinkles etc.

Neutralizing static electricity on film molded goods
- Prevents attaching to conveyer. - Prevents dispersion of finished goods.

Neutralizing static electricity during wafer transfer
- Prevents breakage due to discharge between wafers and hands.

Neutralizing static electricity from packing films
- Prevents the filled substance from adhering to the packing film. - Reduces packing mistakes.

Neutralizing static electricity from lens
- Removes dust from lens. - Prevents adhesion of dust.

Neutralizing static electricity from parts feeder
- Prevents clogging of parts feeder.
IZS40/41/42 Series

Note: Static neutralization features are based on the data using the charged plate (size: 150 mm x 150 mm, capacitance: 20 pF) as defined in the U.S. ANSI standards (ANSI/ESD, STM3.1-2006). For “Sensing AC” mode, the installation height of the sensor is 25 mm. Use this as a guideline purpose only for model selection because the value varies depending on the material and/or size of a subject.
IZS42

1) Without air purge

Supply pressure: 0.1 MPa (8.6 L/min [ANR] per cartridge)

Supply pressure: 0.3 MPa (17.6 L/min [ANR] per cartridge)

Supply pressure: 0.5 MPa (26.4 L/min [ANR] per cartridge)

2) With high speed de-ionizing cartridge, With air purge

Supply pressure: 0.1 MPa (4.3 L/min [ANR] per cartridge)

Supply pressure: 0.3 MPa (8.6 L/min [ANR] per cartridge)

Supply pressure: 0.5 MPa (13.3 L/min [ANR] per cartridge)

3) With energy saving type de-ionizing cartridge, With air purge
IZS40/41/42 Series

Static Neutralization
Characteristics

Note: Static neutralization features are based on the data using the charged plate (size: 150 mm x 150 mm, capacitance: 20 pF) as defined in the U.S. ANSI standards (ANSI/ESD, STM3.1-2006). Use this as a guideline purpose only for model selection because the value varies depending on the material and/or size of a subject.

2) Static Neutralization Range

IZS40, 41
Frequency: 30 Hz

1) Supply pressure: 0 MPa

2) With high speed de-ionizing cartridge, Supply pressure: 0.3 MPa

3) With energy saving type de-ionizing cartridge, Supply pressure: 0.3 MPa

Note: Static neutralization features are based on the data using the charged plate (size: 150 mm x 150 mm, capacitance: 20 pF) as defined in the U.S. ANSI standards (ANSI/ESD, STM3.1-2006). Use this as a guideline purpose only for model selection because the value varies depending on the material and/or size of a subject.

**Input/Output specifications**

- Non-standard bar length: Symbol for producible bar length: \(460 + 60 \times n\) (n: Integer from 1 to 34)
  - For 2, 3, 6, 11, 14, 19, 24, 31 and 34 for n, use a standard model.

#### Power supply cable

- When only an e-con connector for the IZS40 is required, specify “N”, and order a part (Model: ZS-28-C) separately.
  - To use AC adapter, specify “N”, and select AC adapter sold separately (on page 427).
    - (A cord is attached to the AC adapter.)

#### Made to Order

- The number of intermediate brackets differ depending on the bar length. (Refer to the below table.)

### Bar length

- Symbol: Bar length (mm)
  - 340 | 400 | 460 | 580 | 640 | 820 | 1120 | 1300 | 1600 | 1900 | 2320 | 2500

#### One-touch fitting

- Symbol: Bar length symbol
  - 06: ø6 One-touch fitting
  - 08: ø8 One-touch fitting
  - 10: ø10 One-touch fitting

#### Recommended piping port size

- Refer to the table below for selection of One-touch fittings.
  - (mm)

**AC adapter**

- **For IZS40**
  - IZF10-C
    - **AC adapter**
      - G1: AC adapter + AC cord
      - G2: AC adapter (without AC cord)
    - *AC cord is only for use in Japan. (Rated voltage 125 V, plug JIS C8303, inlet IEC60320-C8) External input and output cannot be used when the AC adapter is being used.*

- **For IZS41/42**
  - IZS41-C
    - **AC adapter**
      - G1: AC adapter + AC cord
      - G2: AC adapter (without AC cord)
    - *AC cord is only for use in Japan. (Rated voltage 125 V, plug JIS C8303, inlet IEC60320-C8) External input and output cannot be used when the AC adapter is being used.*

**Transition wiring cable**

**IZS41 – CF**

- **Transition wiring cable**
  - 02: Full length 2 m
  - 05: Full length 5 m
  - 08: Full length 8 m

**How to Order**

**IZS41 – CF X13**

- **Model with Made-to-order transition wiring cable**
  - Available in 1 m increments from 1 m to 20 m.
  - Note 1) 11 m or longer power cables are not CE Marking-compliant.
  - Note 2) Use standard power supply cables for 2 m, 5 m and 8 m lengths.
  - Note 3) Transition wiring is not possible for the IZS40.

**Cleaning kit/IZS30-M2**
IZS40/41/42 Series

Wiring/IZS40

Wire cables according to the circuitry and wiring chart.

1. Grounding of F.G. cable
   Make sure to ground the F.G. cable (green) with a ground resistance of 100 Ω or less.
   The F.G. cable is used as a reference electric potential for de-ionization. If the ground terminal is not properly grounded, an optimal offset voltage cannot be acquired and also causes failure of the equipment. Be sure to connect the ground terminal using a ground resistance of 100 Ω or less.

2. Connection circuit (“POWER” connector)

   Wiring of the IZS40
   e-con is adopted for the connector of the IZS40. Connector with cable or without cable may be selected when placing an order for the power supply cable. When only an e-con is required, place an order for it as a part. (Cable is not supplied.)

   How to connect the cable of the connector
   1) Cut the cable as shown in the figure to the below. Refer to the following table for the applicable wire size.

   2) Insert the cable which was cut into the back of the connector.
   3) Confirm that the cable is inserted into the back of the connector and press part A with your finger to hold tentatively.
   4) Use a tool such as pliers to firmly tighten the center of Part A.
   5) The connector cannot be reused once crimped. If cable insertion fails, use a new connector.

   Number stamped on connector

   Wiring/IZS40

   Connection Circuit/IZS40

   Ionizer (IZS40)

   If cables are prepared by the user, the cable colors shown in the diagram may change according to the cable colors by the user.

Specific Product Precautions 1

Be sure to read this before handling the products.

Selection

⚠️ Caution

1. This product is intended to be used with general factory automation (FA) equipment.
   
   If considering using the product for other applications (especially those stipulated on Safety Instructions), please contact SMC beforehand.

2. Use this product within the specified voltage and temperature range.
   
   Using outside of the specified voltage can cause a malfunction, damage, electrical shock, or fire.

3. Use clean compressed air as fluid. (Air quality Class 2.6.3 specified in ISO 8573-1: 2001 is recommended.)
   
   This product is not explosion proof. Never use a flammable gas or an explosive gas as a fluid and never use this product in the presence of such gases. Please contact us when fluids other than compressed air are used.

4. This product is not explosion-protected.
   
   Never use this product in locations where the explosion of dust is likely to occur or flammable or explosive gases are used. This can cause fire.

⚠️ Warning

1. Clean specification is not available with this product.
   
   This product is not washed. When bringing into a clean room, flush for several minutes and confirm the required cleanliness before using. A minute amount of particles are generated due to wearing of the emitters while the ionizer is operating.

Mounting

⚠️ Caution

1. Reserve an enough space for maintenance, piping and wiring.
   
   Please take into consideration that the one-touch fittings for supplying air, need enough space for the air tubing to be easily attached/detached.

   To avoid excessive stress on the connector and one-touch fitting, please take into consideration the cable and tube minimum bending radius and avoid bending at acute angles.

   Wiring with excessive twisting, bending, etc. can cause a malfunction, wire breakage or fire.

   Minimum bending radius: Power supply cable: 38 mm
   Transition wiring cable: 38 mm
   Sensor cable: 25 mm

   Note: Shown above is wiring with the fixed minimum allowable bending radius and at a temperature of 20 °C. If used under this temperature, the connector can receive excessive stress even though the minimum bending radius is allowable.

   Regarding the minimum bending radius of the tubing, refer to the operation manual or catalog for tubing.

2. Mount this product on a plane surface.
   
   If there are irregularities, cracks or height differences, excessive stress will be applied to the housing or brackets, resulting in damage or other trouble. Also, do not drop or apply a strong shock. Otherwise, damage or an accident can occur. Also, do not drop or apply a strong shock. Otherwise, damage or an accident may occur.

⚠️ Warning

1. Do not install the IZS4-series in a location where walls or structures are within the range shown in the following figure.

   If structures including walls or conductive items are located close to the unit, the generated ions will not effectively reach the object, and the specification may not be satisfied, or cause failure of the product or electric shock due to dielectricity or electric leakage. Install the product according to the dimensions shown in the following figure, keeping away from structures or conductive items.

   − 200

IZS40/41/42 Series
Specific Product Precautions 2
Be sure to read this before handling the products.

⚠️ Caution
2. After installation, be sure to verify the effects of static neutralization. The effects vary depending on the ambient conditions, operating conditions, etc. After installation, verify the effects of static neutralization.

3. When installing the IZS41 or IZS42 in proximity with an ionizer which operates in DC mode, they should be positioned at least 2 meters away from each other. When using the IZS41 or IZS42 near the ionizer in DC mode, keep clearance of at least 2 m between them. Offset voltage may not be adjusted by the internal sensor due to the ions which are discharged from the DC mode ionizer.

⚠️ Warning
11. Transition wiring of ionizer
For transition wiring of ionizers, use a transition wiring cable for connection between ionizers. Use a power supply cable for connection between ionizer and power supply or external equipment. (Transition wiring is not possible with the IZS40.) The number of ionizers that may be connected using transition wiring varies depending on the power supply cable; the length of the transition wiring cable; the use of external sensor(s) and/or models. Refer to the table shown below “Connectable number of ionizers with transition wiring”. The IZS41 and IZS42 can be connected in the same transition wiring, but mixed wiring of the NPN and PNP I/O specifications is not possible. Please contact SMC when connecting conditions other than specified in the table below are applied.

### Connectable number of ionizers (IZS41) with transition wiring (without external sensor)

It is recommended that the power supply used to operate the ionizers have a current capacity twice that of the total current consumption of the ionizers to be used. Power supply voltage should be from 24 to 26.4 VDC.

AC adapter must not be used when ionizer is used in a transition wiring. When ionizers are connected with transition wiring, the same input signal serves as input to all the ionizers. When a signal is output from at least one ionizer in the connection, the signal will be output from the power supply cable.

Connect the power supply cable to the “POWER” connector of the 1st ionizer, and connect the “LINK” connector of the 1st ionizer to the “POWER” connector of the 2nd ionizer with a transition wiring cable. Follow the same procedure to connect subsequent ionizer(s) and after with transition wiring cables.

![Transition wiring cable](Image)

![Power supply cable](Image)

Wiring/Piping

1. Confirm that the power supply voltage is enough and that it is within the specifications before wiring.

2. To maintain product performance, a DC power supply shall be connected per UL listed Class 2 certified by National Electric Code (NEC) or evaluated as a limited power source provided by UL60950.

3. Ground the F.G. wire with 100 $\Omega$ or less according to the instructions in this catalog. An incomplete ground or no grounding not only prevents the performance of the product from being maintained, but may also cause failure or damage of the product, or electric shock to the human body.

4. Be sure to turn off the power supply before wiring (including attachment/detachment of the connector).

5. To connect a feedback sensor or auto balance sensor to the ionizer, use the cable included with the sensor. Do not disassemble or modify the ionizer.

6. When applying the power supply, pay special attention to the wiring and/or surrounding environment until the safety is confirmed.

7. Do not connect or remove any connectors including the power supply, while power is being supplied. Otherwise, the ionizer may malfunction.

8. If the power line and high-pressure line are routed together, this product may malfunction due to noise. Therefore, use a separate wiring route for this product.

9. Be sure to confirm that there are no wiring errors before starting this product. Faulty wiring will lead to product damage or malfunction.

10. Flush the piping before using. Before piping this product, exercise caution to prevent particles, water drops, or oil contents from entering the piping.

Mounting
IZS40/41/42 Series
Specific Product Precautions 3
Be sure to read this before handling the products.

**Operating Environment/Storage Environment**

**Warning**

1. Observe the fluid temperature and ambient temperature range.
   Fluid temperature and ambient temperature ranges are: 0 to 40°C for ionizer, 0 to 50°C for feedback sensor and auto balance sensor (high accuracy type), 0 to 40°C for AC adapter, and 0 to 45°C for remote controller. Do not use the sensor in locations where the temperature may change suddenly even if the ambient temperature range is within the specified limits, resulting in condensation.

2. Do not use this product in an enclosed space.
   This product utilizes a corona discharge phenomenon. Do not use the product in an enclosed space as ozone and nitrogen oxides exist in such places, even though in marginal quantities.

3. Environments to avoid
   Avoid using and storing this product in the following environments since they may cause damage to this product.
   a. Avoid using in a place that exceeds an ambient temperature range.
   b. Avoid using in a place that exceeds an ambient humidity range.
   c. Avoid using in a place where condensation occurs due to a drastic temperature change.
   d. Avoid using in a place in the presence of corrosive or explosive gas or where there is a volatile combustible.
   e. Avoid using in an atmosphere where there are particles, conductive iron powders, oil mist, salt, solvent, blown dust, cutting oil (water, liquid), etc.
   f. Avoid using in a place where ventilated air from an air conditioner is directly applied to the product.
   g. Avoid using in a closed place without ventilation.
   h. Avoid using in direct sunlight or radiated heat.
   i. Avoid using in a place where there is a strong magnetic noise (strong electric field, strong magnetic field, or surge).
   j. Avoid using in a place where static electricity is discharged to the body.
   k. Avoid using in a place where a strong high frequency occurs.
   l. Avoid using in a place where this product is likely to be damaged by lightning.
   m. Avoid using in a place where direct vibration or shock is applied to the main body.
   n. Avoid using in a place where there is a force large enough to deform this product or weight is applied to the product.

4. Do not use an air containing mist or dust.
   The air containing mist or dust will cause the performance to decrease and shorten the maintenance cycle. Install a dryer (IDF series), air filter (AF/AFF series), and/or mist separator (AFM/AM series) to obtain clean compressed air (air quality of Class 2.6.3 or higher according to ISO 8573-1: 2001 is recommended for operation).

5. Ionizer, feedback sensor, auto balance sensor, remote controller, and AC adapter are not resistant to lightning surge.

**Warning**

**Maintenance**

1. Periodically inspect the ionizer and clean the emitters.
   Periodically inspect the electrostatic sensor to check if it is operated while being out of order. Only a person having an adequate knowledge and experience about the system is allowed to inspect the sensor. If particles attach to the emitter by using for long periods of time, the static neutralizing performance will be lowered. Replace the emitter cartridge, if the emitters are worn and the static neutralizing performance does not return even after being cleaned.

2. When cleaning the emitter or replacing the emitter cartridge, be sure to turn off the power supply or air supply to the body.
   If the emitters are touched while the product is energized, this may cause an electric shock or accident.
   If an attempt to replace the emitter cartridges is performed before removing air supply, the emitter cartridges may eject unexpectedly due to presence of the supply air. Remove air supply before replacing the cartridges. If emitter cartridges are not securely mounted to the bar, they may eject or release when air is supplied to the product. Securely mount or remove the emitter cartridges referencing the instructions shown below.

3. Perform the detection procedure in the absence of workpieces. (IZS41, 42)

4. Do not disassemble or modify this product.
   Otherwise, an electrical shock, damage and/or a fire may occur.
   Also, the disassembled or modified products may not achieve the performances guaranteed in the specifications, and exercise caution because the product will not be warranted.

5. Do not operate this product with wet hands.
   Otherwise, an electrical shock or accident may occur.

**Caution**

1. Do not drop, bump or apply excessive impact (100 m/s² or more) while handling.
   Even though it does not appear to be damaged, the internal parts may be damaged and cause a malfunction.

2. When installing the product, handle the product so that no moment is applied to the controller and the ends of the bar.
   Handling the product by holding either end of the bar may cause damage to the product.

3. When mounting/dismounting the cable, use your finger to pinch the claw of the plug, then attach/detach it correctly.
   If the modular plug is at a difficult angle to attach/detach, the jack’s mounting section may be damaged and cause a disorder.
