Immersion type

**New** Immersion type

**ATEX Compliant**

55-JSXFA Series

\* The tank should be provided by the customer.
Long service life: 10 million cycles\(^*1\) or more
A spring is not necessary due to the high-strength elastomer diaphragm.

OFF response time: 45\(^*1,2\) reduction

Fluid temperature: \(-40\) to \(60^\circ\)C
Can be used in a wide range of temperatures

Easier maintenance
The springless diaphragm allows for easy maintenance of the valve. A main valve and sub-valve (for 40A) are included in the maintenance kit.

Flow rate characteristics: 40\(^*1,2\) increase
Optimal design for the internal geometry

No need to weld the tank piping

Compression fitting type
JSXFAE Series

"Pulse Valve Valve for Dust Collector JSXFA Series"

Dedicated Controller for Operation VXFC Series
The valve controller can turn the many valves for the dust controller ON/OFF.

Power supply voltage
85 to 240 VAC
12 VDC, 24 to 48 VDC

Number of output points
6 output points, 10 output points
Pulse valve application examples

Remove fine particles using a pulse valve!

Pulse blow can be used in various industries!

General production lines
Agriculture / livestock
Steel and cement
Food
Pharmaceuticals
Mining

### How to Order

**JSXFA**

1. **Piping**
   - E: Compression fitting type
   - F: Direct piping type
   *1 Seals and washers are included.

2. **IN/OUT port size**
   - 06: 3/4 (20A)
   - 10: 1 (25A)
   - 14: 1 1/2 (40A)

3. **Thread type**
   - R: Rc
   - N: NPT
   - F: G

4. **Fluid and ambient temperatures**
   - B: −40 to 60°C

5. **With/without silencer**
   - Nil
   - 1

6. **Pilot port size**
   - Nil: 1/4
   - 1: 1/8

---

### Caution

**Selection of Pilot Valve (JSXFAE/F/H common)**

For the pilot valve orifice diameter, ø5 mm or larger is recommended.

When the pilot valve diameter is ø3 mm or larger and less than ø5 mm, put “A” to the end of the product number for made-to-order. The product may not operate correctly if the pilot valve orifice diameter is inadequate. (port size: 3/4, 1)

Depending on the pilot piping port size*1 or length, the valve may not operate correctly.

*1 The I.D. of the pilot piping must be larger than the pilot valve orifice diameter to use. The maximum pilot piping I.D. is 10 mm.

---

### Made to Order

**Pilot valve orifice diameter: Special specification**

**A**

- For ø3 mm to ø5 mm
- Port size: 06, 10

**JSXFA**

Enter the standard product number.

Working Principle

Port size: Sizes 06, 10

De-energized
The air enters from the IN side goes through the supply orifice of the main valve to fill the pressure action chamber. The main valve is closed by the pressure built in the pressure action chamber.

Right after energized
When the pilot valve is energized, the armature opens, and the air filling the pressure action chamber is released to the atmosphere through the pilot valve.

Energized (Main valve open)
Due to the release of air from the pilot valve to atmosphere, the pressure in the pressure action chamber decreases (force pushing the main valve down < force pushing the main valve up), opening the main valve. Because of this, the air flows to the OUT side.

Caution Selection of Pilot Valve

Port size: Size 14

De-energized
The air enters from the IN side goes through the supply orifice of the main valve and sub-valve to fill the pressure action chamber. The main valve and sub-valve are closed by the pressure built in the pressure action chamber.

Right after energized
When the pilot valve is energized, the armature opens, and the air filling the pressure action chamber is released to the atmosphere through the pilot valve.

Energized (Sub-valve open)
Due to the release of air from the sub-valve pressure action chamber (1) decreases (force pushing the sub-valve down < force pushing the sub-valve up), opening the sub-valve. Because of this, the air filling the pressure action chamber (2) is released to the atmosphere from the exhaust port.

Energized (Main valve open)
Due to the release of air from the pressure action chamber (2), the pressure in the pressure action chamber (1) decreases (force pushing the main valve down < force pushing the main valve up), opening the main valve. Because of this, the air flows to the OUT side of the pulse valve.

Caution Selection of Pilot Valve

Disassembly/Assembly Procedure

**Caution**

1. Before starting the disassembly work, be sure to shut off the power supply and pressure supply, and then release the residual pressure.

**Disassembly**

1) Loosen the hexagon bolts and remove the bonnet, O-ring, and main valve (sub-valve).

**Assembly**

1) Assemble the main valve (sub-valve) to the body. The main valve (sub-valve) has a required mounting direction. Assemble the valve referring to Fig. 1. If the valve is assembled in incorrect direction, it can cause a malfunction.

2) Mount the O-ring to the body groove. (See Fig. 2.) After mounting of the O-ring, check if the O-ring is fitted properly in the groove. If it is out of the groove, external leakage and/or operation failure may occur.

3) Assemble the bonnet to the body.

4) Tighten the hexagon bolts diagonally. (See Table 1 for the tightening torque.)

**Table 1 Proper Tightening Torque [N·m]**

---

**Caution**

**Selection of Pilot Valve**

For the pilot valve orifice diameter, ø5 mm or larger is recommended.

When the pilot valve orifice diameter is ø3 mm or larger and less than ø5 mm, put “A” to the end of the product number for made-to-order. The product may not operate correctly if the pilot valve orifice diameter is inadequate. (port size: 3/4, 1)

Depending on the pilot piping port size\(^*1\) or length, the valve may not operate correctly.

\(^*1\) The I.D. of the pilot piping must be larger than the pilot valve orifice diameter to use. The maximum pilot piping I.D. is 10 mm.

**Made to Order**

**Pilot valve orifice diameter: Special specification**

| A | For ø3 mm to ø5 mm | Port size: 06, 10 |

Two-time Hitting Function

A two-time hitting function has been adopted to improve the bag filter dusting efficiency. Turn ON the DIP switch for two-time hitting (OFF for one-time hitting).

(Effective for up to the number of set channels)

**Operation sequence diagram**

For 4 output points

Two-time hitting only for CH2
ON for 1 s
OFF for 2 s

Interrupt Operation Function

Interrupting an operation via an external switch is possible using input signals.

**Operation sequence diagram**

Cascade Connection (Multiple-board connection)

VXFC10: One board only allows 10 output points max., but the points can be increased to 20 or 30 output points by connecting cascades.

**Connection**

Controller No. 1 (Master)
Master setting

Controller No. 2 (Slave)
Slave setting

Controller No. 3 (Slave)
Slave setting

Controller No. n (Slave)
Slave setting

[Application example]
**Pressure Terminology**

1. **Maximum operating pressure differential**
   The maximum pressure differential (the difference between the inlet and outlet pressure) which is allowed for operation. When the outlet pressure is 0 MPa, this becomes the maximum operating pressure.

2. **Minimum operating pressure differential**
   The minimum pressure differential (the difference between the inlet pressure and outlet pressure) required to keep the main valve fully open.

3. **Maximum system pressure**
   The maximum pressure that can be applied inside the pipelines (line pressure).
   [The pressure differential of the solenoid valve portion must not exceed the maximum operating pressure differential.]

---

**Other**

1. **Symbol**
   In the symbol ( ), when the valve is closed, flow is blocked from port 1 to port 2. However, if the pressure in port 2 is higher than port 1, the valve will not be able to block the fluid and it will flow from port 2 to port 1.
**Warning**

1. **Cannot be used as an emergency shutoff valve, etc.**
   - The valves presented in this catalog are not designed for safety applications such as an emergency shutoff valve. If the valves are used in this type of system, other reliable safety assurance measures should also be adopted.

2. **Continuous valve open**
   - The valve is for pulse operation. Do not open the valve continuously. Since a large amount of air is consumed, the diaphragm will oscillate (chatter) due to insufficient air supply on the inlet side, and this can lead to failure.

**Caution**

1. When using a silencer, make space for silencer replacement.

**Warning**

3. **Countermeasures against static electricity**
   - Take measures to prevent static electricity, since some fluids can cause static electricity.

4. **Low temperature operation**
   1. The valve can be used in fluid temperatures down to –40°C. However, take measures to prevent the freezing or solidification of impurities, etc.
   2. The installation of a dryer, retaining the heat of the body, etc., is recommended to prevent a freezing condition in which the dew point temperature is high and the ambient temperature is low, or the high flow is running.

5. **Fluid properties**
   - Use a general compressed air with a filter of 5 µm or less mounted on the inlet of the piping. (Excluding dry air)

**Caution**

1. **Leakage voltage**
   - When the solenoid valve is operated using the controller, etc., the leakage voltage should be the product allowable leakage voltage or less. Particularly when using a resistor in parallel with a switching element and using a C-R element (surge voltage suppressor) to protect the switching element, take note that leakage current will flow through the resistor, C-R element, etc., creating a possible danger that the valve may not turn off.

   - **AC coil**: 5% or less of rated voltage
   - **DC coil**: 2% or less of rated voltage

**Mounting**

1. **Cannot be used as an emergency shutoff valve, etc.**
2. **Continuous valve open**
3. **Ambient environment**
   - Use within the operable ambient temperature range. Confirm the compatibility between the product's composition materials and the ambient atmosphere. Be certain that the fluid used does not touch the external surface of the product.

**Selection**

1. **Air quality**
   1. **Use clean air.**
      - Do not use compressed air that contains chemicals, synthetic oils that include organic solvents, salt, corrosive gases, etc., as it can cause damage or malfunction.
   2. **Install air filters.**
      - Install air filters upstream near the valves. A filtration size of 5 µm or less should be selected.
   3. **Install an aftercooler or air dryer, etc.**
      - Compressed air that contains excessive drainage may cause the malfunction of valves and other pneumatic equipment. To prevent this, install an aftercooler, air dryer, etc.
   4. **If excessive carbon powder is generated, eliminate it by installing mist separators on the upstream side of valves.**

2. **Ambient environment**
   - Use within the operable ambient temperature range. Confirm the compatibility between the product's composition materials and the ambient atmosphere. Be certain that the fluid used does not touch the external surface of the product.

3. **Countermeasures against static electricity**
   - Take measures to prevent static electricity, since some fluids can cause static electricity.

4. **Low temperature operation**
   1. The valve can be used in fluid temperatures down to –40°C. However, take measures to prevent the freezing or solidification of impurities, etc.
   2. The installation of a dryer, retaining the heat of the body, etc., is recommended to prevent a freezing condition in which the dew point temperature is high and the ambient temperature is low, or the high flow is running.

5. **Fluid properties**
   - Use a general compressed air with a filter of 5 µm or less mounted on the inlet of the piping. (Excluding dry air)

**Caution**

1. **Leakage voltage**
   - When the solenoid valve is operated using the controller, etc., the leakage voltage should be the product allowable leakage voltage or less. Particularly when using a resistor in parallel with a switching element and using a C-R element (surge voltage suppressor) to protect the switching element, take note that leakage current will flow through the resistor, C-R element, etc., creating a possible danger that the valve may not turn off.

   - **AC coil**: 5% or less of rated voltage
   - **DC coil**: 2% or less of rated voltage

**Selection**

1. **Air quality**
   1. **Use clean air.**
      - Do not use compressed air that contains chemicals, synthetic oils that include organic solvents, salt, corrosive gases, etc., as it can cause damage or malfunction.
   2. **Install air filters.**
      - Install air filters upstream near the valves. A filtration size of 5 µm or less should be selected.
   3. **Install an aftercooler or air dryer, etc.**
      - Compressed air that contains excessive drainage may cause the malfunction of valves and other pneumatic equipment. To prevent this, install an aftercooler, air dryer, etc.
   4. **If excessive carbon powder is generated, eliminate it by installing mist separators on the upstream side of valves.**

2. **Ambient environment**
   - Use within the operable ambient temperature range. Confirm the compatibility between the product's composition materials and the ambient atmosphere. Be certain that the fluid used does not touch the external surface of the product.

3. **Countermeasures against static electricity**
   - Take measures to prevent static electricity, since some fluids can cause static electricity.

4. **Low temperature operation**
   1. The valve can be used in fluid temperatures down to –40°C. However, take measures to prevent the freezing or solidification of impurities, etc.
   2. The installation of a dryer, retaining the heat of the body, etc., is recommended to prevent a freezing condition in which the dew point temperature is high and the ambient temperature is low, or the high flow is running.

5. **Fluid properties**
   - Use a general compressed air with a filter of 5 µm or less mounted on the inlet of the piping. (Excluding dry air)

**Caution**

1. **Leakage voltage**
   - When the solenoid valve is operated using the controller, etc., the leakage voltage should be the product allowable leakage voltage or less.    - **AC coil**: 5% or less of rated voltage
   - **DC coil**: 2% or less of rated voltage

**Mounting**

1. **Cannot be used as an emergency shutoff valve, etc.**
2. **Continuous valve open**
3. **Ambient environment**
   - Use within the operable ambient temperature range. Confirm the compatibility between the product's composition materials and the ambient atmosphere. Be certain that the fluid used does not touch the external surface of the product.
JSXFA Series
Specific Product Precautions 2

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 2-port solenoid valve for fluid control precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: https://www.smcworld.com

**Piping**

⚠️ **Warning**

1. During use, deterioration of the tubes or damage to the fittings could cause the tubes to come loose from their fittings and thrash about.
   To prevent uncontrolled tube movement, install protective covers or fasten tubes securely in place.
2. Do not use the compression fitting of the valve to support the piping. The piping could disconnect from the valve. Be sure to mount the valve to secured piping. (Compression fittings do not have a valve-holding function.)

⚠️ **Caution**

1. Use a steel tube for the IN and OUT piping.
2. Preparation before piping
   Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil, and other debris from inside the pipe.
   Install piping so that it does not apply pulling, pressing, bending, or other forces on the valve body.
3. Avoid connecting ground lines to piping, as this may cause electric corrosion in the system.
4. Always tighten threads with the proper tightening torque.
   When attaching fittings to valves, tighten with the proper tightening torque as shown below.

### Tightening Torque for Piping

<table>
<thead>
<tr>
<th>Connection thread</th>
<th>Proper tightening torque [N·m]</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rc1/4</td>
<td>12 to 14</td>
</tr>
<tr>
<td>Rc3/8</td>
<td>22 to 24</td>
</tr>
<tr>
<td>Rc1/2</td>
<td>28 to 30</td>
</tr>
<tr>
<td>Rc1/4</td>
<td>28 to 30</td>
</tr>
<tr>
<td>Rc1</td>
<td>36 to 38</td>
</tr>
<tr>
<td>Rc1 1/2</td>
<td>40 to 42</td>
</tr>
</tbody>
</table>

5. Tightening of the compression nut
   Be sure to tighten the compressor nut sufficiently to prevent the nut from loosening and to prevent leakage from occurring.

### Wrench Tightening Angle after Hand-tightening

<table>
<thead>
<tr>
<th>Size</th>
<th>Wrench tightening angle</th>
</tr>
</thead>
<tbody>
<tr>
<td>3/4 (20A)</td>
<td>90° to 270°</td>
</tr>
<tr>
<td>1 (25A)</td>
<td>135° to 315°</td>
</tr>
<tr>
<td>1 1/2 (40A)</td>
<td>150° to 330°</td>
</tr>
</tbody>
</table>

- Mount the valve to secured piping.
- Insert the piping until it stops to prevent the piping from going in slanted.
- Do not expose the piping to oil or moisture. Otherwise, the valve may come off easily.
- Sealing performance will decrease due to the deterioration of seals. Tighten the compression nut regularly.

6. Installation of the immersion type

- For the immersion type, adequately tighten and check the pipe assembly to prevent leakage, looseness, and play.
- As shown in the figure, install the valve onto the tank, then insert the pipe assembly into the OUT port of the valve from the opposite side. After that, screw it in using the tightening torque indicated in the table below.

<table>
<thead>
<tr>
<th>Size</th>
<th>Wrench tightening angle</th>
<th>Tightening torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 (25A)</td>
<td>10 to 15°</td>
<td>50 to 100 N·m</td>
</tr>
</tbody>
</table>

Do not apply excessive torque because this may cause the valve to break or the tank to become deformed or damaged. When applying any additional tightening force, use the angle or torque indicated below as a guide after the support and tank are in contact with each other. (Refer to Fig. 1 and Fig. 2.) When screwing in the pipe assembly, hold it in place using a wrench to prevent it from turning. (Fig. 3)

The recommended tank is the ANSI shc40. If making your own tank, ensure that it has sufficient strength to prevent it from becoming deformed when the valve is being screwed in.

- Note that if the pipe assembly is inserted obliquely into the OUT port of the valve, the O-ring inside the valve may become damaged as a result. Ensure that the pipe assembly is inserted straight.
- Sometimes the pipe assembly becomes loose due to vibration caused by air discharge, so be sure to periodically tighten the pipe assembly. Also, if necessary, coat the threaded part of the valve with a locking agent.

### Pipe Assembly Wrench Tightening Angle (Guide)

**Procedure for installing the valve on the tank**

Fig. 1

- Support
- Hexagonal part of the pipe assembly

Fig. 2

- Secure the support with a wrench. When securing the support, first align the curved faces of the tank and the support.
- Tighten the hexagonal part of the pipe assembly with a wrench. Refer to the table for the wrench tightening angle (guide).

Fig. 3

- Cross section of the nut
- Washer
- Seal
- Compression nut
- IN
- Piping
### Caution

7. When connecting piping to a product
   Avoid mistakes regarding the supply port, etc.

8. If a regulator, or a restrictor, is installed immediately before or after the IN port of the valve, the main valve may oscillate (chatter). Install them away from the valve or change the restriction.

9. The header tank capacity should be sufficient. (Install a sufficient air volume immediately upstream from the IN side) This is a valve for large flow rate, so if the capacity is small, the main valve may not open or may oscillate due to pressure drop or insufficient air supply.

### Operating Environment

#### Warning

1. Do not use in an atmosphere containing corrosive gases, chemicals, sea water, water vapor, or where there is direct contact with any of these.

2. The standard model cannot be used in explosive atmospheres. For use in explosive atmospheres, select the SS-JSXF. (Refer to page 13.)

3. Do not use in locations subject to vibration or impact.

4. Do not use in locations where radiated heat will be received from nearby heat sources.

5. Employ suitable protective measures in locations where there is contact with oil, welding spatter, etc.

### Maintenance

#### Caution

1. Filters
   1. Be careful regarding clogging of filters.
   2. Replace filter elements after one year of use, or earlier if the pressure drop reaches 0.1 MPa.

2. Storage
   In case of long term storage after use, thoroughly remove all moisture to prevent rust, the deterioration of rubber materials, etc.

3. Exhaust the drainage from air filters periodically.

#### Appearance

##### Caution

1. Surface treatment is applied to the product to improve corrosion resistance. There may be spot pattern on the surface depending on the treatment condition, but there is no problem in use.

#### Wiring

##### Warning

1. The controller starts its output the moment the power switch is turned ON. Be aware that even if the power switch is turned OFF, power is connected to the terminal block.

##### Caution

1. Make sure that the power supply voltage to be input matches the voltage in the controller’s specifications. The power supply voltage that has been input becomes the voltage that is output to the solenoid valves.

2. Connect a ground that is rated Class 3 or greater to the power supply terminal block’s FG.

3. If the power source is DC, use caution to its polarity. If the polarity is incorrect, it may result in a malfunction or damage.

4. For details, refer to the separate Operation Manual.

5. The solenoid valve mounted on the controller should be equipped with a surge voltage suppressor.

#### Operating Environment

##### Warning

1. Operate under conditions that are free of vibration and impact.

2. Operate in an ambient temperature range between 0°C and 50°C.

3. Operate in an ambient humidity range between 45% to 80% (no condensation).
Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\(^1\), and other safety regulations.

Caution: Indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

Warning: Indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

Danger: Indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

**Safety Instructions**

**Warning**

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications. Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

**Caution**

1. The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries.

   If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

   If anything is unclear, contact your nearest sales branch.

**Limited warranty and Disclaimer/Compliance Requirements**

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

**Limited warranty and Disclaimer**

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\(^2\)

   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

   * Vacuum pads are excluded from this 1 year warranty.
   * A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

**Compliance Requirements**

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

**Caution**

SMC products are not intended for use as instruments for legal metrology. Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

**Revision History**

- An immersion type has been added.
- The ATEX compliant 55-JSFXA series has been added.
- Number of pages has been increased from 16 to 20.

**Safety Instructions** Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
