## Allowable Moment (N·m)

### Allowable static moment

Pitching	142
Rolling	79
Yawing	150

**m** : Transfer load (kg)  
**a** : Work piece acceleration (mm/s<sup>2</sup>)  
**Me** : Dynamic moment  
**L** : Overhang to work piece center of gravity (mm)

### Allowable dynamic moment

Refer to page 58 for deflection data.

## Investigation of the regeneration option

Depending on the conditions (speed, addition-subtraction speed, down time, load, etc.), the regeneration option may be required. The results of consideration in each case of maximum load or half load for the product specification are below. Please consult SMC when considering the necessity of the regeneration option.

### Maximum load

Driver type	Regeneration option model
<b>A1</b>	Not required.
<b>A2</b>	Not required.
<b>B1</b>	Not required.
<b>B2</b>	Not required.

### Half load

Driver type	Regeneration option model
<b>A1</b>	Not required.
<b>A2</b>	Not required.
<b>B1</b>	Not required.
<b>B2</b>	Not required.

<b>Insulation resistance [MΩ]</b>		Between case and SG: 10 (500 VDC)			
<b>Weight [g]</b>		800			

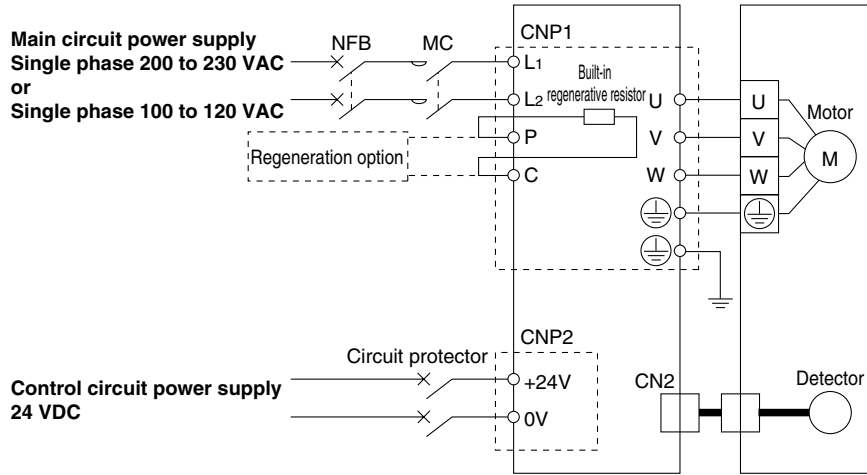

\*1 USB communication and RS422 communication cannot be performed at the same time.

# Series LECSA

## Series LECSB

### Power Supply Wiring Example: LECSA

LECSA□-□

#### Main Circuit Power Supply Connector: CNP1 \*Accessory

Terminal name	Function	Function details
	Protective earth (PE)	Should be grounded via servo motor's earth terminal and control panel's protective earth (PE) after connecting them.
L1	Main circuit power supply	Connect the main circuit power supply. LECSA1: Single phase 100 to 120 VAC, 50/60 Hz LECSA2: Single phase 200 to 230 VAC, 50/60 Hz
L2		
P	Regeneration option	Terminal to connect regeneration option LECSA□-S1: No need for connection LECSA□-S3, S4: Connected at time of shipping. * If regeneration option is required for "Model Selection", connect to this terminal.
C		
U	Servo motor power (U)	Connect to motor cable (U, V, W)
V	Servo motor power (V)	
W	Servo motor power (W)	

#### Control Circuit Power Supply Connector: CNP2 \*Accessory

Terminal name	Function	Function details
24V	Control circuit power supply (24V)	24V side of the control circuit power supply (24 VDC) which supplies the controller.
0V	Control circuit power supply (0V)	0V side of the control circuit power supply (24 VDC) which supplies the controller.

## Power Supply Wiring Example: LECSB

### LECSB1-□

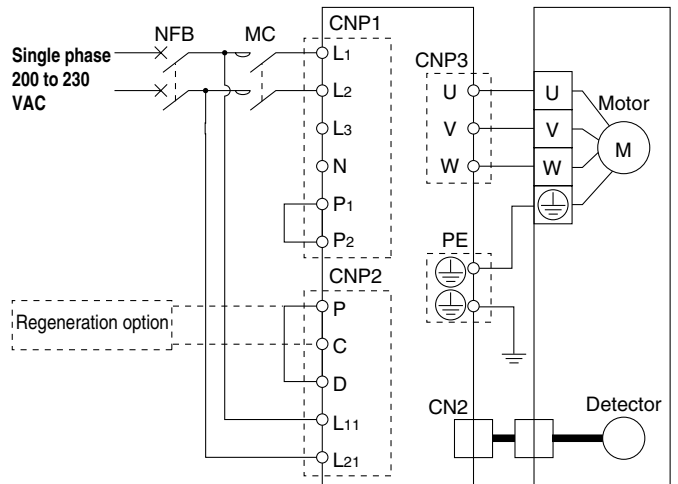

### LECSB2-□

For three phase 200 VAC

For single phase 200 VAC

Note) For single phase 200 to 230 VAC, power supply should be connected to L1 and L2 terminals, with nothing connected to L3.

### Main Circuit Power Supply Connector: CNP1 \*Accessory

Terminal name	Function	Function details
L1	Main circuit power supply	Connect the main circuit power supply. LECSB1: Single phase 100 to 120 VAC, 50/60 Hz Connection terminal: L1,L2 LECSB2: Single phase 200 to 230 VAC, 50/60 Hz Connection terminal: L1,L2 Three phase 200 to 230 VAC, 50/60 Hz Connection terminal: L1,L2,L3
L2		
L3		
N	Regeneration converter	Do not connect.
P1	DC reactor	Connect between P1 and P2. (Connected at time of shipping.)
P2		

### Control Circuit Power Supply Connector: CNP2 \*Accessory

Terminal name	Function	Function details
P	Regeneration option	Connect between P and D. (Connected at time of shipping.) * If regeneration option is required for "Model Selection", connect to this terminal.
C		
D		
L11	Control circuit power supply (24 V)	24V side of the control circuit power supply (24 VDC) which supplies the controller.
L21	Control circuit power supply (0 V)	0V side of the control circuit power supply (24 VDC) which supplies the controller.

### Motor Connector: CNP3 \*Accessory

Terminal name	Function	Function details
U	Servo motor power (U)	Connect to motor cable (U, V, W)
V	Servo motor power (V)	
W	Servo motor power (W)	

# Series LECSA

## Series LECSB

### Control Signal Wiring Example: LECSA

LECSA□-□

Note 1) For preventing electric shock, be sure to connect the main circuit power supply connector for the servo amplifier (CNP1)'s protective earth (PE) terminal to the control panel's protective earth (PE).

Note 2) For interface use, supply 24 VDC  $\pm$ 10% 200 mA using an external source. 200 mA is the value when all I/O command signals are used and reducing the number of inputs/outputs can decrease current capacity. Refer to "Operation Manual" for required current for interface.

Note 3) The failure (ALM) is ON during normal conditions. When it is OFF (alarm occurs), stop the sequencer signal using the sequence program.

Note 4) The same name signals are connected inside the servo amplifier.

Note 5) For command pulse input with an open collector method. When a positioning unit loaded with a differential line driver method is used, it is 10 m or less.

## Control Signal Wiring Example: LECSB

LECSB□-□

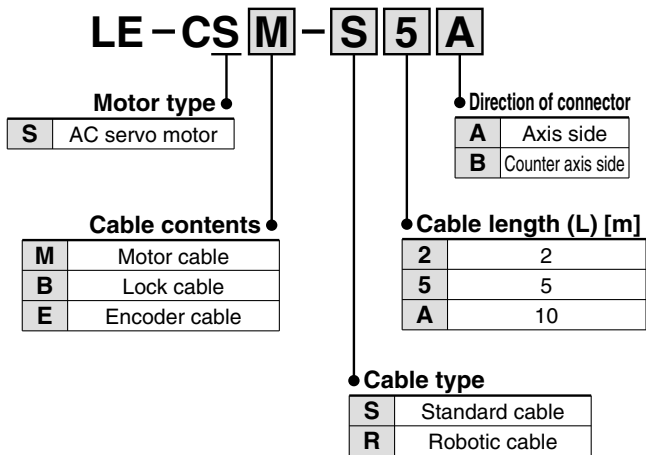

Note 1) For preventing electric shock, be sure to connect the servo amplifier's protective earth (PE) terminal to the control panel's protective earth (PE).  
 Note 2) For interface use, supply 24 VDC  $\pm 10\%$  300 mA using an external source.  
 Note 3) The failure (ALM) is ON during normal conditions. When it is OFF (alarm occurs), stop the sequencer signal using the sequence program.  
 Note 4) The same name signals are connected inside the servo amplifier.  
 Note 5) For command pulse input with a differential line driver method. For open collector method, it is 2 m or less.

# Series LECSA

# Series LECSB

## Options

### Motor cable, Lock cable, Encoder cable

\* For cases where the cable is mounted before delivery, the direction of the connector is listed below.  
 Motor cable: Counter axis side  
 Lock cable: Counter axis side  
 Encoder cable: Axis side

### LE-CSM-□□: Motor cable

### LE-CSB-□□: Lock cable

### LE-CSE-□□: Encoder cable

### I/O connector

### LE-CSNA

### LE-CSNB

### Regeneration option

## LEC - MR - RB - □

Regeneration option type	
032	Allowable regeneration power 30 W
12	Allowable regeneration power 100 W

### Dimensions [mm]

Model	LA	LB	LC	LD
LEC-MR-RB-032	30	119	99	1.6
LEC-MR-RB-12	40	169	149	2

## Options

### MR Configurator (setup software Japanese version)

## LEC – MR – SETUP221

\* MRZJW3-SETUP221 manufactured by Mitsubishi Electric.  
 Refer to Mitsubishi Electric's website for operating environment and update information.

### Compatible PC

When using MR Configurator (setup software), use an IBM PC/AT compatible PC that meets the following operating conditions.

### Hardware Requirements

Equipment		MR Configurator (setup software) LEC-MR-SETUP221
Note 1) Note 2) Note 3) PC	OS	Windows®98, Windows®Me, Windows®2000 Professional, Windows®XP Professional/Home Edition, Windows Vista® Home Basic/Home Premium, Business/Ultimate/Enterprise Windows®7 Starter/Home Premium/Professional/ Ultimate/Enterprise IBM PC/AT compatible PC (Japanese version)
	Available HD space	130 MB or more
	Communication interface	Use USB port
Display	Resolution 1024 x 768 or more Must be capable of high color (16 bits) display. The connectable with the above PC	
Keyboard	The connectable with the above PC	
Mouse	The connectable with the above PC	
Printer	The connectable with the above PC	
Communication cable	LEC-MR-J3USB	

Note 1) Windows, Windows Vista, Windows 7 are registered trademarks of Microsoft Corporation in the United States and/or other countries.

Note 2) This software may not run correctly depending on the PC that you are using.

Note 3) Not compatible with 64-bit Windows® XP and 64-bit Windows Vista®.

### USB cable (3 m) for setup software

## LEC – MR – J3USB

### Battery

## LEC – MR – J3BAT

# Series **LECSA/LECSB** Specific Product Precautions 1

Be sure to read before handling. Refer to back cover for Safety Instructions and the Operation Manual for Electric Actuator Precautions.  
Please download it via our website. <http://www.smcworld.com>

## Design/Selection

### Warning

- 1. Be sure to apply the specified voltage.**  
Otherwise, malfunction and breakage may be caused. If the applied voltage is lower than the specified, it is possible that the load cannot be moved due to an internal voltage drop of the driver. Please check the operating voltage before use.
- 2. Do not operate the product beyond the specifications.**  
Otherwise, a fire, malfunction or actuator damage can result. Please check the specifications before use.
- 3. Install an emergency stop circuit outside of the enclosure.**  
Please install an emergency stop outside of the enclosure so that it can stop the system operation immediately and intercept the power supply.
- 4. In order to prevent damage due to the breakdown and the malfunction of the driver and its peripheral devices, a backup system should be established previously by giving a multiple-layered structure or a fail-safe design to the equipment, etc.**
- 5. If a danger against the personnel is expected due to an abnormal heat generation, smoking, ignition, etc., of the driver and its peripheral devices, cut off the power supply for the product and the system immediately.**

## Handling

### Warning

- 1. Do not touch the inside of the driver and its peripheral devices.**  
It may cause an electric shock or damage to the driver.
- 2. Do not perform the operation or setting of the product with wet hands.**  
It may cause an electric shock.
- 3. Product with damage or the one lacking of any components should not be used.**  
It may cause an electric shock, fire, or injury.
- 4. Use only the specified combination between the electric actuator and driver.**  
It may cause damage to the actuator or the driver.
- 5. Be careful not to be caught or hit by the workpiece while the actuator is moving.**  
It may cause an injury.
- 6. Do not connect the power supply or power on the product before confirming the area to which the workpiece moves is safe.**  
The movement of the workpiece may cause an accident.
- 7. Do not touch the product when it is energized and for some time after power has been disconnected, as it is very hot.**  
It may lead to a burn due to the high temperature.
- 8. Check the voltage using a tester for more than 5 minutes after power-off in case of installation, wiring and maintenance.**  
It may cause an electric shock, fire, or injury.

## Handling

### Warning

- 9. Static electricity may cause malfunction or break the driver. Do not touch the driver while power is supplied.**  
When touching the driver for maintenance, take sufficient measures to eliminate static electricity.
- 10. Do not use the product in an area where dust, powder dust, water, chemicals or oil is in the air.**  
It will cause failure or malfunction.
- 11. Do not use the product in an area where a magnetic field is generated.**  
It will cause failure or malfunction.
- 12. Do not install the product in the environment of flammable gas, explosive gas and corrosive gas.**  
It could lead to fire, explosion and corrosion.
- 13. Radiant heat from strong heat supplies such as a furnace, direct sunlight, etc., should not be applied to the product.**  
It will cause failure of the driver or its peripheral devices.
- 14. Do not use the product in an environment subject to a temperature cycle.**  
It will cause failure of the driver or its peripheral devices.
- 15. Do not use the product in a place where surges are generated.**  
When there are units that generate a large amount of surge around the product (e.g., solenoid type lifters, high frequency induction furnaces, motors, etc.), this may cause deterioration or damage to the product's internal circuit. Avoid supplies of surge generation and crossed lines.
- 16. Do not install the product in an environment under the effect of vibrations and impacts.**  
It will cause failure or malfunction.
- 17. When a surge generating load such as a relay or solenoid valve is directly driven, use a product that incorporates a surge absorption element.**

## Installation

### Warning

- 1. Install the driver and its peripheral devices on a fire-proof material.**  
A direct installation on or near a flammable material may cause fire.
- 2. Do not install the product in a place subject to vibrations and impacts.**  
It will cause failure or malfunction.
- 3. The driver should be affixed vertically to a vertical wall. Do not cover the driver's exhaust opening.**
- 4. Install the driver and its peripheral devices on a flat surface.**  
If the mounting surface is distorted or not flat, an unacceptable force may be added to the housing, etc., to cause troubles.

# Series *LECSA/LECSB*

## Specific Product Precautions 2

Be sure to read before handling. Refer to back cover for Safety Instructions and the Operation Manual for Electric Actuator Precautions.  
Please download it via our website. <http://www.smcworld.com>

### Power Supply

#### ⚠ Caution

1. Use a power supply that has low noise between lines and between power and ground.  
In cases where noise is high, an isolation transformer should be used.
2. To prevent surges from lightning, an appropriate measure should be taken. Ground the surge absorber for lightning separately from the grounding of the driver and its peripheral devices.

### Wiring

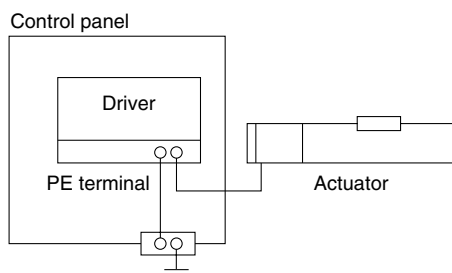

#### ⚠ Warning

1. The driver will be damaged if a commercial power supply (100V/200V) is added to the driver's servo motor power (U, V, W). Be sure to check wiring such as wiring mistakes when the power supply is turned on.
2. Connect the ends of the U, V, W wires from the motor cable correctly to the phases (U, V, W) of the servo motor power.  
If these wires do not match up, it is unable to control the servo motor.

### Grounding

#### ⚠ Warning

1. Be sure to carry out grounding in order to ensure the noise tolerance.  
For grounding actuator, connect the copper wire of the actuator to the driver's protective earth (PE) terminal and connect the copper wire of the driver to the earth via the control panel's protective earth (PE) terminal. Do not connect them directly to the control panel's protective earth (PE) terminal.

2. In the unlikely event that malfunction is caused by ground, please disconnect the unit from ground.

### Maintenance

#### ⚠ Warning

1. Perform a maintenance check periodically.  
Confirm wiring and screws are not loose.  
Loose screws or wires may cause unintentional malfunction.
2. Conduct an appropriate functional inspection after completing the maintenance.  
At times where the equipment or machinery does not operate properly, conduct an emergency stop of the system. Otherwise, an unexpected malfunction may occur and it will become impossible to secure the safety. Conduct a test of the emergency stop in order to confirm the safety of the equipment.
3. Do not disassemble, modify or repair the driver and its peripheral devices.
4. Do not put anything conductive or flammable inside of the driver.  
It may cause a fire.
5. Do not conduct an insulation resistance test and withstand voltage test on this product.
6. Ensure sufficient space for maintenance activities.  
Design the system that allows required space for maintenance.
