Wide Type Parallel Style Air Gripper Ø 10, Ø 16, Ø 20, Ø 25 Ø 32, Ø 40

Weight reduced by changing the body shape and internal construction

- Dust-resistant option now available. (Made to order: -X85, -X86□)
- Closing width adjusting option now available. (Made to order: -X28)
- Small auto switches can be directly mounted.
- Mounting brackets are not required. This reduces assembly labour.
- Direct mounting is now possible due to the new groove shape.
 - Solid state auto switch: D-M9
- Performance and mounting dimensions are interchangeable with the existing model.

Built-in dust protection mechanism (Standard) All rod rotating parts now feature a scraper with a dust lip.

Dust-resistant option now available. (Made to order) Pages 21 to 24

- In micro-powder (10 to 100 μ m) environments \rightarrow With double Lube-retainer (-X85)
- Prevents particles and foreign matter from entering the gripper The Lube-retainer ensures a consistent film of grease, improving gripper endurance.
- In dusty environments → With heavy duty scraper + Lube-retainer (-X86□) Applicable for environments containing particles or foreign matter
 - A grease film is formed on the rod by the Lube-retainer in order to improve endurance. * Seal material can be NBR or fluororubber.

through the use of a double piston mechanism, while maintaining a compact design.

Œ \oplus

An auto switch can be mounted in 4 locations.

Series Variations

resin bearings are used for all shafts.

*2 Water resistant type auto switches can be mounted on the above models, but SMC cannot guarantee water resistance.

* Solid state auto switches marked with "O" are produced upon receipt of order.

* When using the 2-colour indicator type, please make the setting so that the indicator is lit in red to ensure the detection at the proper position of the air gripper.

Long stroke

One unit can handle workpieces with various diameters.

A large amount of gripping force is provided, through the use of a double piston mechanism, while maintaining a compact design.

Double-end type oil-impregnated resin bearings are used for all shafts.

Symbol

Double acting: Internal grip Double acting: External grip

* The opening and closing widths represent the value when gripping the exterior of a workpiece.

"Gripping force at least 10 to 20 times the workpiece weight" • The "10 to 20 times or more of the workpiece weight" recommended by SMC is calculated with a margin of "a" = 4, which allows for impacts that occur

during normal transportation, etc.

When gripping a workpiece as in the figure to the left, and with the following definitions,

- F: Gripping force [N]
- μ: Coefficient of friction between the attachments and the workpiece
- m: Workpiece mass [kg]
- g: Gravitational acceleration (= 9.8 m/s²)
- mg: Workpiece weight [N]

the conditions under which the workpiece will not drop are

î__ -Number of fingers and therefore.

SMC

With "a" representing the margin, "F" is determined by the following formula:

$$F = \frac{mg}{2 x \mu} x a$$

- Even in cases where the coefficient of friction is greater than $\mu = 0.2$, for reasons of safety, select a gripping force which is at least 10 to 20 times greater than the workpiece weight, as recommended by SMC.
 - If high acceleration or impact forces are encountered during motion, a further margin should be considered.

Step 2 Check the gripping point.

- The workpiece gripping point distance should be within the gripping force ranges given for each pressure in the effective gripping force graphs above.
- If operated with the workpiece gripping point beyond the indicated ranges, the load that will be applied to the fingers or the guide will become excessively unbalanced. As a result, the fingers could become loosened and adversely affect the service life of the unit.

MHL2 Series Auto Switch Installation Examples and Mounting Positions

Various auto switch applications are possible through different combinations of auto switch quantities and detecting positions. **1) Detection when Gripping Exterior of Workpiece**

	Detection example	① Confirmation of fingers in reset position	② Confirmation of workpiece held	③ Confirmation of workpiece released
	Position to be detected	Position of fingers fully open	Position when gripping a workpiece	Position of fingers fully closed
C	Operation of auto switch	When fingers return: Auto switch to turn ON (Light ON)	When gripping a workpiece: Auto switch to turn ON (Light ON)	When a workpiece is not held (Abnormal operation): Auto switch to turn ON (Light ON)
nbinations	One auto switch * One position, any of ①, ② and ③ can be detected.	•	•	•
Detection combinations	Two auto switches * Two positions of ①, ② and ③ can be detected.	• •	•	
	How to determine auto switch installation position	Step 1) Fully open the fingers.	Step 1) Position fingers for gripping a workpiece.	Step 1) Fully close the fingers.
	At no pressure or low pressure, connect the auto switch to a power	Step 2) Insert the auto switch into the mounting groove from the direction of		
	supply, and follow the directions.	Step 3) Slide the auto switch in the direction of the arrow until the indicator light illuminates and fasten it at a position 0.3 to 0.5 mm in the direction of the arrow beyond the position where the indicator light illuminates. Position where light turns ON	Step 3) Slide the auto switch in the direction of the arrow until the indicator light illuminates.	Step 4) Slide the auto switch further in the direction of the arrow until the indicator light goes out.
		Position to be secured	Step 5) Slide the auto switch in the op 0.3 to 0.5 mm beyond the position where light turns ON	pposite direction and fasten it at a position ere the indicator light illuminates.

* • It is recommended that gripping of a workpiece be performed close to the centre of the finger stroke.

• When holding a workpiece close at the end of opening/closing stroke of fingers, detecting performance of the combinations listed in the above table may be limited, depending on the hysteresis of an auto switch, etc.

MHL2 Series **Auto Switch Installation Examples** and Mounting Positions

Various auto switch applications are possible through different combinations of auto switch quantities and detecting positions. 2) Detection when Gripping Interior of Workpiece

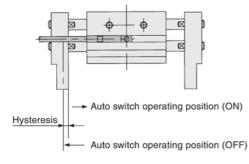

Detection example	① Confirmation of fingers in reset position	② Confirmation of workpiece held	③ Confirmation of workpiece released			
Position to be detected	Position of fingers fully closed	Position when gripping a workpiece	Position of fingers fully open			
Operation of auto switch	When fingers return: Auto switch to turn ON (Light ON)	When gripping a workpiece: Auto switch to turn ON (Light ON)	When a workpiece is not held (Abnormal operation): Auto switch to turn ON (Light ON)			
Subject One auto switch * One position, any of ①, ② and ③ can be detected. Two auto switches ② and ③ can be ② and ③ can be detected.	•	•	•			
Two auto switches E		•	_			
Two auto switches Two positions of ①, ② and ③ can be detected		•	•			
How to determine auto switch installation position	Step 1) Fully close the fingers.	Step 1) Position fingers for gripping a workpiece.	Step 1) Fully open the fingers.			
At no pressure or low pressure, connect the auto switch to a power	Step 2) Insert the auto switch into the mounting groove from the direction of					
supply, and follow the directions.	Step 3) Slide the auto switch in the direction of the arrow until the indicator light	Step 3) Slide the auto switch in the direction of the arrow until the indicator light illuminates and fasten it at a position 0.3 to 0.5 mm in the direction of the arrow beyond the position where the indicator light illuminates.				
	illuminates. Step 4) Slide the auto switch further in the direction of the arrow until the indicator light goes out.	Position where light turns ON				
	Step 5) Slide the auto switch in the opposite direction and fasten it at a position 0.3 to 0.5 mm beyond the position where the indicator light illuminates.		→ 0.3 to 0.5 mm			
	Position where light turns ON Position to be secured	Position to be secured				
* • It is recommended that gripping	of a workpiece be performed close to the	I antro of the finger stroke				

• When holding a workpiece close at the end of opening/closing stroke of fingers, detecting performance of the combinations listed in the above table may be limited, depending on the hysteresis of an auto switch, etc.

SMC

Auto Switch Hysteresis

The auto switch hysteresis is shown in the table. Refer to the table as a guide when setting auto switch positions.

	[mm]
Auto switch model Air gripper model	D-M9□(V) D-M9□W(V) D-M9□A(V)
MHL2-10D	0.2
MHL2-16D	0.5
MHL2-20D	0.4
MHL2-25D Z	0.4
MHL2-32D Z	0.9
MHL2-40D	0.7

Prior to Use Auto Switch Connections and Examples

Source Input Specifications

Sink Input Specifications

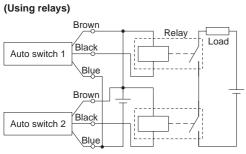

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

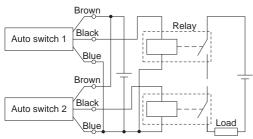

Examples of AND (Series) and OR (Parallel) Connections

* When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid. Depending on the operating environment, the product may not operate properly.

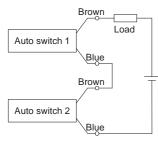

3-wire AND connection for NPN output

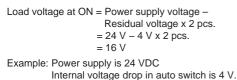

3-wire AND connection for PNP output (Using relays)

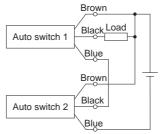

2-wire AND connection

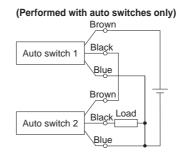

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with a load voltage less than 2 0 V cannot be used.

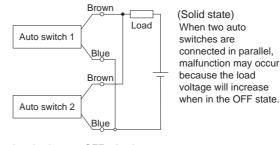

(Performed with auto switches only)

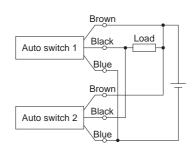

2-wire OR connection

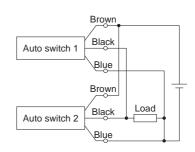

Load voltage at OFF = Leakage current x 2 pcs. x Load impedance = 1 mA x 2 pcs. x 3 k Ω = 6 V

Example: Load impedance is 3 k Ω . Leakage current from auto switch is 1 mA.

3-wire OR connection for NPN output

3-wire OR connection for PNP output

(Reed)

Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

MHL2 Series Made to Order

1 -X4	Heat Resistant (-10 to 100 °C) Pa	age 18

Made to Order MHL2 Series

	Symbol
1 Heat Resistant (–10 to 100 °C)	-X4

Seal material and grease have been changed so that the product can be used at temperatures between -10 up to 100 °C.

How to Order

Specifications

Ambient temperature range	-10 °C to 100 °C (No freezing)			
Seal material	Fluororubber			
Grease	Heat-resistant grease (GR-F)			
Specifications/dimensions other than the above	Same as the standard type			

≜ Warning

Precautions

Be aware that smoking cigarettes after your hands have come into contact with the grease used for this product can create a gas that is hazardous to humans.

2 Fluororubber Seal

How to Order

Fluororubber seal

Specifications

Seal material	Fluororubber	
Specifications/dimensions other than the above	Same as the standard type	

- * Magnet is built-in, but when using an auto switch, the acceptable temperature range becomes -10 to 60 °C.
- * For lubrication, specialised grease GR-F is recommended.

Replacement Parts: Seal Kit

	Seal kit part number
	MHL□□-PS-X4
*	Enter the cylinder bore size into $\Box\Box$ of the seal kit part number.

Refer to page 7 for the replacement parts. The seal kit does not include a grease pack. Order it separately. **Grease pack part number: GR-F-005** (5 g)

- Symbol -X5
- Please contact SMC, since the type of chemical and the operating temperature may not allow the use of this product.
- Since the standard type magnet is built-in, please contact SMC for the product's adaptability to the operating environment.

3 With Bolt for Adjusting the Closing Width

Finger closing stroke can be fine-tuned by an adjustment bolt.

How to Order

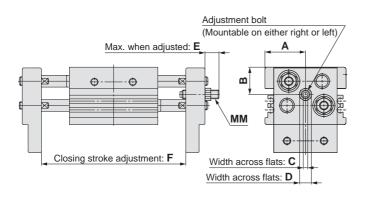

Specifications

Adjustment range/ Adjustment bolt position	Refer to the dimensions below.	
Specifications other than the above	Same as the standard type	
Dimensions	Refer to the dimensions below.	

Please contact SMC for Ø 40.

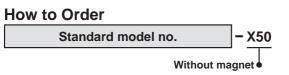

The bumper at the end of the adjustment bolt is not heat resistant. Combination with high temperature type is only available with a metal stopper.

Dimensions (The dimensions other than specified below are the same as the standard type.)

How to Order

∆Warning Precautions

Be aware that smoking cigarettes after your hands have come into contact with the grease used for this product can create a gas that is hazardous to humans. For lubrication, specialised grease GR-F is recommended.
 Grease pack part number: GR-F-005 (5 g)

Specifications

Grease	Fluorine grease (GR-F)			
Specifications/dimensions other than the above	Same as the standard type			

Grease for Food Processing Machines: Fluorine Grease

Use grease for food processing machines (NSF-H1 certified/fluorine grease).

How to Order

7

▲ Warning Precautions

Be aware that smoking cigarettes after your hands have come into contact with the grease used for this product can create a gas that is hazardous to humans.

ACaution

Do not use air grippers in a food-related environment.

<Not installable>

Food zone Food may directly contact with air grippers, and is treated as food products.

<Installable>

Splash zone Food may directly contact with air grippers, but is not treated as food products.

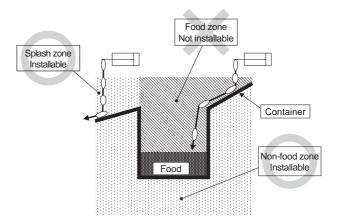

Non-food zone Air grippers do not directly contact food.

For lubrication, specialised grease GR-H is recommended.
 Grease pack part number: GR-H-010 (10 g)

Specifications

Grease	Grease for food processing machines (NSF-H1 certified)/Fluorine grease
Specifications/dimensions other than the above	Same as the standard type

 If the fluorine grease is not applicable to the working environment, use "-X79A."

8 Grease for Food Processing Machines: Aluminium Complex Soap Base Grease

Symbol -X79A

-X85

Use grease for food processing machines (NSF-H1 certified).

How to Order

Grease for food processing machines: Aluminium complex soap base grease

ACaution

Do not use air grippers in a food-related environment.

<Not installable>

Food zone Food may directly contact with air grippers, and is treated as food products.

<Installable>

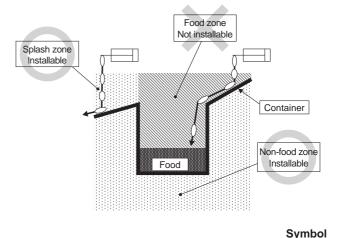

Splash zone Food may directly contact with air grippers, but is not treated as food products.

Non-food zone Air grippers do not directly contact food.

* For lubrication, specialised grease GR-R is recommended. Grease pack part number: GR-R-010 (10 g)

Specifications

Grease	Grease for food processing machines (NSF-H1 certified)/Aluminium complex soap base grease
Specifications/dimensions other than the above	Same as the standard type

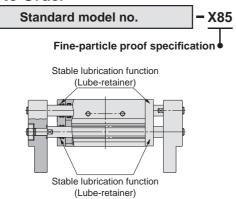

9 Fine-particle Proof Specification

Applicable for environments with flying micro-powder (10 to 100 µm) such as ceramic powder, toner powder, paper powder, and metallic powder (excluding weld spatter)

A grease film is formed on the rod by the Lube-retainer which maintains lubrication for longer increasing gripper endurance.

Gripping Point

- The workpiece gripping point distance should be within the gripping force ranges given for each pressure in the effective gripping force graphs on the next page.
- If operated with the workpiece gripping point beyond the indicated ranges, the load that will be applied to the fingers or the guide will become excessively unbalanced. As a result, the fingers could become loosened and adversely affect the service life of the unit.

MHL2 Series **Specific Product Precautions**

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For air gripper and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.es

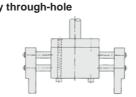

Design

Marning

If a workpiece is hooked onto the attachment, make sure that excessive impact will not be created at the start and the end of the movement. Failure to observe this precaution may result in shifting or dropping the workpiece, which could be dangerous.

1. Make sure that the piston rod is retracted so as to avoid twisting the piston rod when mounting an attachment to the finger.

- 2. Do not scratch or dent the sliding parts of the piston rod. Damage to the bearings or seals may cause air leaks or faulty operation.
- 3. Refer to the table on the right for the proper tightening torque on the bolt used for securing the attachment to the finger.

▲ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

н

etc.

Caution indicates a hazard with a low level of risk ▲ Caution: which, if not avoided, could result in minor or moderate injury.

Warning indicates a hazard with a medium level of risk \triangle Warning: which, if not avoided, could result in death or serious injury.

Danger indicates a hazard with a high level of risk Manger : Which, if not avoided, will result in death or serious injury. ------

🗥 Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3.Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
 - 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
 - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
 - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
 - 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalogue.
 - 3. An application which could have negative effects on people, property, or animals requiring special safety analysis
 - 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

∧ Caution

1. The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

If anything is unclear, contact your nearest sales branch.

*1) ISO 4414: Pneumatic fluid power - General rules relating to systems. ISO 4413: Hydraulic fluid power - General rules relating to systems. IEC 60204-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements) ISO 10218-1: Manipulating industrial robots - Safety.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements". Read and accept them before using the product.

Limited warranty and Disclaimer

- 1. The warranty period of the product is 1 year in service or 1.5 years the product is delivered, wichever is first.*2) after Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.

*2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

/ Safety Instructions Be sure to read "Handling Precautions for SMC Products" (M-E03-3) before using.
