

## **Ordering SMC Catalog Items**

Standard SMC catalog parts only meet specifications and application data as published in SMC catalogs and related product information documentation at the time of purchase. Ordering a standard SMC p/n assumes the catalog product specification meets the customer's requirements and no additional SMC review is required.

If the customer has a drawing for a SMC catalog item, review of the customer drawing for changes is the responsibility of the customer to ensure the standard SMC catalog part still meets the requirements. Any additional product requirements for a SMC catalog item including packaging/labeling requires a request for special (RFS) submission.
