

# Air Servo Cylinder

ø125, ø160, ø200, ø250, ø320

Produced upon receipt of order

IP67

## Capable of air cylinder multipoint positioning and control

**HART**  
COMMUNICATION PROTOCOL

Fast response and high positioning repeatability

Positioning repeatability:  $\pm 0.5$  mm

Measuring conditions Bore size: ø200 mm, Cylinder stroke: 200 mm, Load mass: 70 kg

Easier maintenance due to unitization

The valve unit, pilot valve, controller assembly, seal kit, etc., are replaceable.

Easy initial setting

Built-in self-diagnosis function (LED lamp and signal output)

Emergency stop of the piston when the air or power supply is cut

### Application Example

**IN-777**

P-E19-18 ®

## Capable of air cylinder multipoint positioning and control

With a built-in position sensor, the servo valve can be used to control the flow rate on both the head side and the rod side of the cylinder, and it can also be used to position the cylinder.

## Cylinder with an integrated servo valve and controller

## Easier maintenance due to unitization p. 9

## Easy initial setting

Input an I/O signal to move the rod forward, and set the rod stop position to 20 mA (or 4 mA).

Rod retraction end: 4 mA (or 20 mA)

Rod stop position: Set to 20 mA (or 4 mA)

## Speed adjustment function

Capable of 10-level speed setting

Measuring conditions: Supply pressure: 0.55 Mpa, Mounting: Vertical downward, Load: no-load, Operating direction: Upward

- \* The average speed value is the stroke divided by the "full stroke time." The "full stroke time" refers to the time from when the target position operation signal is input until the piston stops.
- \* The average speed adjustment range of each cylinder size varies according to the operating conditions.
- \* The data above provide a guide for selection but is not guaranteed.

## Built-in self-diagnosis function

(LED lamp and signal output)

- LED display
- It is possible to output digital signals.

LED display	
PWR	Power supply status
CTR	Controller status
CYL	Cylinder position sensor error
VAL	Valve error
RF	Rod friction error

## Fail-safe ports

If the air servo cylinder air or power supply is cut, air from the emergency tank can be supplied via the FA/FB port in order to allow for the manual operation of the air cylinder rod.

# Air Servo Cylinder

ø125, ø160, ø200, ø250, ø320

Produced upon receipt of order

## How to Order

IN-777-**160**TF-**300**F**J**-**H****L**

### Bore size

125	125 mm
160	160 mm
200	200 mm
250	250 mm
320	320 mm

### Port thread type

TF	G
----	---

### Stroke [mm]

125	250
160	200, 300
200	200, 300
250	350, 450
320	200, 350, 530*1

\*1 The models specified above are classified as Class-2 Pressure Vessels, as stipulated in the order for enforcement of the Industrial Safety and Health Act, and they are therefore not for use within Japan.

### Mounting

F	With rod flange
---	-----------------

### Auto-start function

Nil	None
S	With

\* The FOUNDATION Fieldbus communication type does not have an auto-start function.

### LED alarm display

L	With LED alarm display
---	------------------------

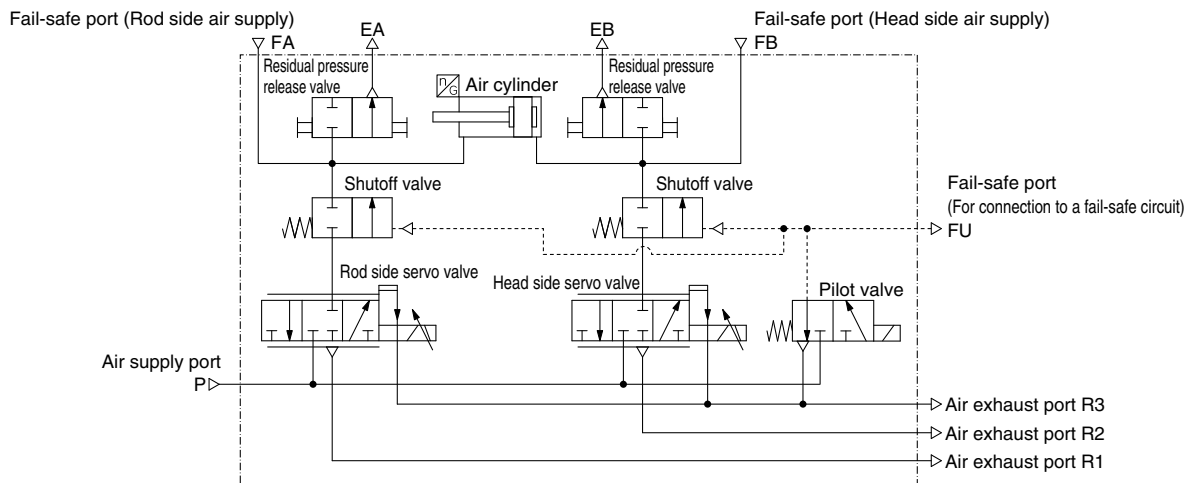

### Communication protocol

H	4-20 mA/HART communication
F	FOUNDATION Fieldbus communication

### Rod boot

Symbol	Material	Ambient temperature
J	Silicone rubber	-20°C to 60°C (No freezing)
A	Nylon tarpaulin	-10°C to 60°C (No freezing)
Nil	None	-20°C to 60°C (No freezing)

## Pneumatic Circuit

## Specifications

### Electrical Specifications

Communication protocol	4-20 mA/HART communication	FOUNDATION Fieldbus communication
Power supply	Supply voltage: 24 VDC ±10%	
Control system	Closed loop	
Position sensor	Absolute	
Analog input signal	4 to 20 mA DC	—
Analog input impedance	Approx. 250 Ω	—
Analog output signal	4 to 20 mA DC	
Analog output impedance	500 Ω	
Voltage between terminals	12 VDC (Equivalent to 600 Ω input resistance at 20 mA DC)	—
Switch input signal	4 inputs, Connect to +24 VDC ±10% Current consumption: 10 mA or less	
Switch output signal	5 outputs, n-type MOSFET open source output Max. load current: 100 mA	

### Functional Specifications

- JOG operation
- No signal operation
- Self-diagnosis function (Allows for controller, valve, and position sensor error output when an abnormality is present)
- Fail-safe operation
- Calibration (Automatic/Manual)
- Emergency stop
- Residual pressure release valve mounted
- Target position operation
- Speed adjustment (10-level)

## Specifications

### Mechanical Specifications

Action	Double acting, Single rod
Fluid	Air
Compressed air filtration	0.3 μm or less
Proof pressure	1.2 MPa
Operating pressure range	0.55 to 0.8 MPa
Positioning repeatability	±0.5 mm or less
Average speed	Refer to <b>Table 1</b> .
Ambient temperature	Silicone rubber material with or without rod boot: –20°C to 60°C (No freezing) Nylon tarpaulin with rod boot: –10°C to 60°C (No freezing)
Fluid temperature	–20°C to 60°C (No freezing)
Operating humidity	35 to 85% (No condensation)
Enclosure	IP67
Standards	CE, UKCA, RoHS
Weight	Refer to <b>Table 2</b> .
Lubrication	Non-lube
Mounting orientation	Vertical downward/Vertical upward
Vibration resistance	Total amplitude or acceleration: 1.5 mm or 3 G
	Vibration frequency: 5 to 100 Hz
	Vibration applying direction: 3 directions (X, Y, and Z)
	Sweep time/cycle: 12 min/10 cycles
Impact resistance	Acceleration: 15 G
	Pulse applying time/waveform: 11 ms/Sine wave
	Pulse applying direction: 3 times in each direction (X, Y, and Z axes)
Allowable lateral load	Refer to <b>Table 3</b> .
Theoretical output/Work load	Refer to <b>Table 4</b> .
Power supply connector (body)	M23 19-pin connector (Male): Refer to <b>Table 5</b> .

## Working Principle/Construction

The ③ position sensor built in to the ③ air cylinder outputs the current position of the ⑱ piston rod to the ⑥ controller.

Next, the ⑥ controller outputs a command signal to the 2 ⑨ servo valves according to the target position signal sent from the host controller.

Then, according to the command signal sent from the ⑥ controller, the ⑨ servo valves control the ③ air cylinder air supply or exhaust to move the piston rod forwards or backwards, or to stop it at the target position.

The opening and closing of the ⑪ shutoff valve is controlled by the ⑩ pilot valve connected to the ⑥ controller.

Two air-operated ⑪ shutoff valves (head side and rod side) are mounted along the air passage between the ⑨ servo valves and the ③ air cylinder. During an emergency stop (air or power supply cutoff, emergency stop signal input, etc.), the 2 ⑪ shutoff valves will close and ③ air cylinder operation will be stopped.

A 160 bore size, 200 mm stroke air cylinder is used in the drawings.

Back portion of ø125 to ø250 head covers

Top portion of ø320 head covers

Cross-section portion of ø320 rod ends

## Component Parts

No.	Description	Material/Surface treatment	No.	Description	Material/Surface treatment
1	Controller assembly* <sup>1</sup>	Aluminum alloy/Anodized (Main parts)	21	Rod cover	ø160 to ø250: Aluminum die-cast/Chromated ø125 and ø320: Aluminum alloy/Anodized
2	Valve unit* <sup>1</sup>	—	22	Tie-rod nut	Stainless steel
3	Air cylinder	—	23	Flange* <sup>2</sup>	Steel/Zinc plating

Ambient temperature specifications

Silicone rubber material: -20°C to 60°C (No freezing)

Nylon tarpaulin: -10°C to 60°C (No freezing)

## Operation Modes

### ■ Target position operation

The rod position is decided according to the Sig-in signal input by the external controller.

The rod position is then output as a Pos-out signal.

\* Be sure to calibrate the product before use. If the set point has not yet been set, the rod will not move even during a target position operation. Refer to page 10 for calibration instructions.

\* The operating direction can be changed.

### ② Valve unit

IN-777P-010AS

### ⑨ Servo valve

XT581-V-C-X001

### ⑩ Pilot valve

V211KT-5LOZ-X48

### ③ Position sensor unit

IN-777P-200-830AS

#### Cylinder stroke

200	200 mm
250	250 mm
300	300 mm
350	350 mm
450	450 mm
530	530 mm

\* For the position sensor unit, the cylinder stroke is the same for all tube sizes.

### Seal kit

IN-777P-125-910AS

#### Bore size

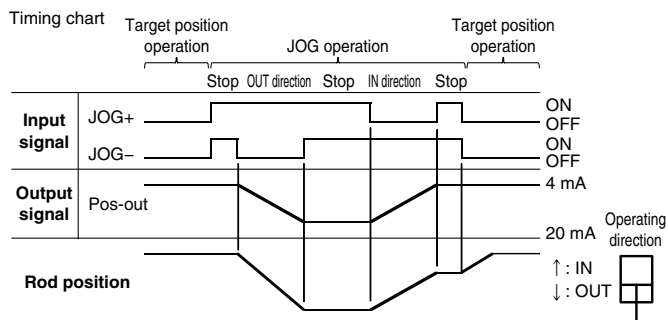

125	This set includes the following: ⑬ Tube gasket (2 pcs.)
160	⑮ Piston seal (1 pc.)
200	⑮ Rod seal (1 pc.)
250	⑮ Wear ring (1 pc.)
320	⑮ Pipe O-ring (2 pcs.)
320	This set includes the following: ⑬ Tube gasket (2 pcs.)
	⑮ Piston seal (1 pc.)
	⑮ Rod seal (1 pc.)
	⑮ Wear ring (1 pc.)
	⑮ Pipe O-ring (2 pcs.)
	⑮ Wiper ring (1 pc.)

\* The seal kit includes a grease pack.

\* The circled numbers correspond to the component numbers in the cross-section construction drawing on page 8.

### ■ JOG operation

The rod moves according to the JOG signal input by the external controller.

		JOG+	
		OFF	ON
JOG-	OFF	Target position operation	JOG operation (Moves in the OUT direction)
	ON	JOG operation (Moves in the IN direction)	JOG operation (Stops)

\* The device will move to the target position input as the Sig-in and stop when changing from JOG operation to target position operation.

## Operation Modes

### ■ Calibration

Set the rod position (set point) by inputting a CAL signal into the external controller and setting the Sig-in signal to 20 mA (default).  
When changing the operation direction, the 4 mA rod position becomes the set point.  
It is possible to change the operation mode from automatic to manual.

### Automatic (Default)

When the CAL signal is turned ON, the rod will move in the OUT direction, and the position where the rod stops for 1 s will become the set point.  
When the CAL signal is turned OFF, the rod will move in the IN direction, and the rod will stop at the retraction end.

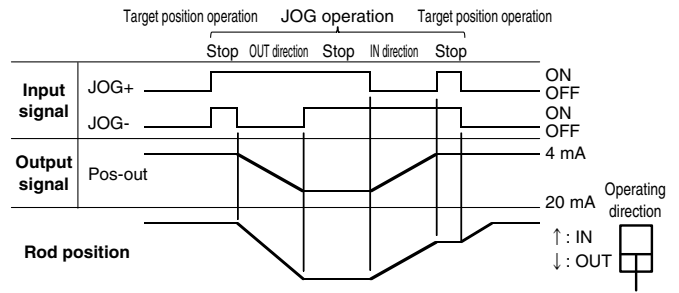

\*1 If the set point has not yet been set, the rod will not move even during a target position operation.

\*2 The target position may vary slightly before and after the set point has been set, even if the Sig-in signal is the same.

### Manual

The rod will be moved by the JOG signal, and the position of the rod when the CAL signal is input will become the set point.

### ■ No signal operation

This is the operation mode used when the Sig-in signal input into the external controller is 4 mA or less.  
The rod will move to the predetermined position and then stop.

### ■ Emergency stop

When the air servo cylinder air or power supply is cut during use, the built-in shutoff valves will close, stopping the rod.  
Air from the emergency tank can be supplied via the fail-safe port (FA/FB) in order to allow for the operation of the air cylinder rod.

### ■ HART (Highway Addressable Remote Transducer) communication

With this communication type, a digital signal is superimposed on the 4-20 mA Sig-in signal and then transmitted. Connect a HART communication device (provided by the customer) between the Sig-in + and the Sig-in -.

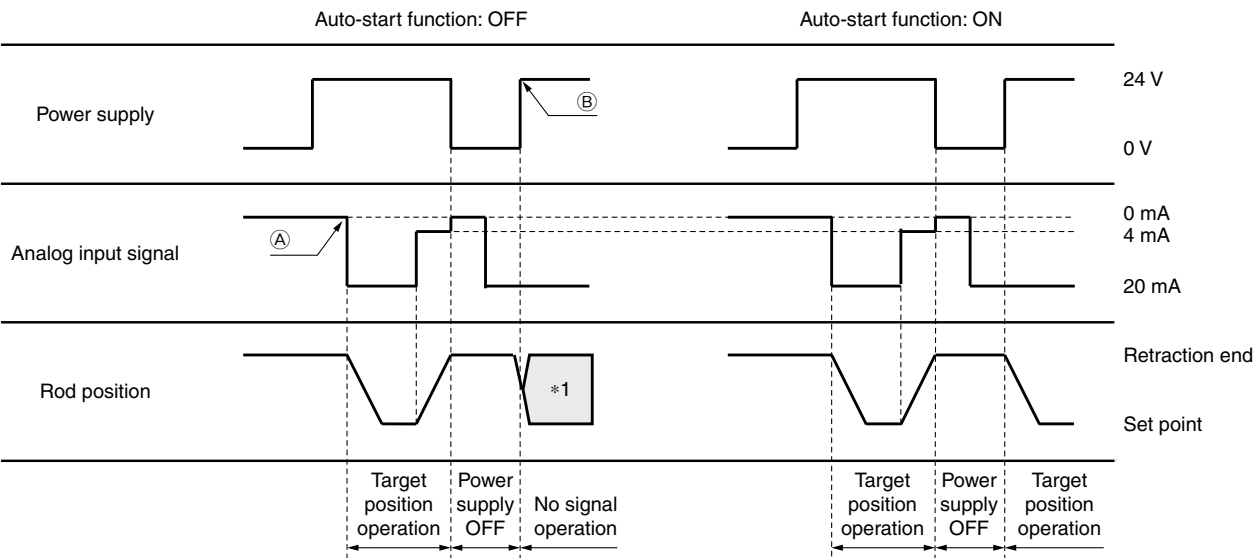

Main transmission contents
1. IN-777 information – confirmation and revision
2. HART communication settings – confirmation and revision
3. Cylinder operating conditions - setting and confirmation
4. Calibration - execution
5. Operating mode - setting and revision
6. JOG operation - execution
7. Operation status/Alarm confirmation

Operation Modes

■ **Auto-start function** \* There is no auto-start function for the FOUNDATION Fieldbus communication type.

For the auto-start function OFF specification, to start the target position operation, input the analog input signal (A) only after turning the power supply ON. Inputting the analog input signal before the power supply has been turned ON (B) will result in a switch to no-signal operation.

For the auto-start function ON specification, the order in which the analog input signal is inputted and the power supply is turned ON does not matter; the target position operation will start once both requirements have been satisfied.

\*1 For no-signal operation, stopping at the retraction end, stopping at the set point, or stopping at the current position can be selected when determining the settings.

# IN-777

## Air Servo Cylinder Specific Product Precautions

Be sure to read this before handling the products.

### Mounting

#### ⚠ Caution

1. Vibration may occur due to positioning control depending on the operating environment, load, conditions, etc.

Be sure to inspect the actual machine for sufficient strength retention in regard to the amount of cylinder vibration that occurs.

2. Mount so that a lateral load which exceeds the allowable lateral load is not applied to the piston rod.

If a lateral load which exceeds the allowable lateral load is applied, the positioning repeatability during the target position operation will decline, which may lead to piston rod malfunction.

In addition, if the seals, cylinder tubing, etc., come into direct contact with the metal parts of the piston, air leakage due to uneven wear or reduced service life due to accelerated wear of the bearing may result. Refer to **Table 2** on page 4 for the allowable lateral load.

3. When a workpiece is mounted on the piston rod end, connect them by aligning the axial center of the piston rod and that of the workpiece.

If they are off-center, a lateral load will be generated and the phenomena mentioned in item 2 may occur.

4. When mounting the body, be sure to avoid force being applied to the piping between the air cylinder head cover and the rod cover, cover tube, power supply connector, etc.

Applying excessive external force to the piping may result in damage to the piping or a malfunction.

As screw holes for installing eye bolts are provided on the head covers of sizes  $\phi 160$  and larger, insert the eye bolts into the screw holes and hang the product to mount it.

### Operating Precautions

#### ⚠ Caution

1. When powering-up the product, restarting after an emergency stop, or switching the operating mode, be careful as the piston rod may suddenly extend or retract according to the settings.

2. Avoid use in environments where condensation is generated.

When moving the product to a location at room temperature after operating it in low-temperature conditions, the temperature will rise suddenly and condensation will be generated. If water droplets from the generated condensation adhere to the internal substrate, an electric short-circuit may occur, resulting in a malfunction.

### Maintenance

#### ⚠ Caution

1. When disassembling the product for controller assembly replacement, etc., be sure not to touch the substrate with your bare hands.

### Safety Instructions

Be sure to read the "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" before use.
