3-Color Display

IO-Link Compatible

- Process data size: 6-byte input
- Various types of diagnostic tests can be performed using service data.

IO-Link (PF3W7-L Series)

Diagnostic contents

- Over current error, Above the rated flow/temperature range,
- Accumulated flow error, Below the rated temperature range,
- Internal product malfunction, Temperature sensor failure

Rated flow range: 0.5 to 4, 2 to 16, 5 to 40, 10 to 100, 50 to 250 L/min

Digital Flow Switch for Water

PF3W-Z/L Series

CAT.ES100-133A
3-color/2-screen display

- Main screen shows the instantaneous flow rate only.
- Fluid temperature can be displayed only when the digital flow switch with a temperature sensor is selected.
- Sub screen can be turned off.
- Mode display can be selected for IO-Link compatible type.

Compatible with the temperature sensor & flow adjustment valve

- Temperature sensor
  - Display range: −10 to 110°C (Temperature sensor alone)
  - Smallest settable increment: 1°C
  - Analog output: Current output/Voltage output

- Flow adjustment valve
  - Reduced piping labor
  - Space saving

Fluid temperature: 0 to 90°C

Ethylene glycol aqueous solution can be used.

Example) Flow control of the circulating fluid in a chiller

Non-grease
Remote Sensor Unit & 3-Color Display Digital Flow Monitor

Indicator

Visually check the status of the sensor via the indicator.

- Flow rate: High
  - Blinking green/Fast
- Flow rate: Low
  - Blinking green/Slow
- Rated flow or less
  - OFF
- Rated flow or more
  - Red ON

Set value copy function

The settings of the master monitor (source of copy) can be copied to the slave monitors.

- **Reduced setting labor**
- **Minimized risk of setting mistakes**

The set value can be copied to up to 10 flow monitors simultaneously.

Master monitor: Source of copy
Slave side: 1 unit
Slave side: 2 units
Slave side: 10 units

Mounting

- **Bracket mounting**
- **Direct mounting**
- **Panel mounting**

Panel mounting
- Front protective cover
- Panel mount adapter
- Waterproof seal (Accessory)
- Tapping screw (4 pcs.)

For details, refer to the Web Catalog.
Supports the IO-Link communication protocol

IO-Link is an open communication interface technology between the sensor/actuator and the I/O terminal that is an international standard, IEC61131-9.

Device settings can be set by the master.
• Threshold value
• Operation mode, etc.

Read the device data.
• Switch ON/OFF signal and analog value
• Device information: Manufacturer, Product part number, Serial number, etc.
• Normal or abnormal device status
• Cable breakage

Implement diagnostic bits in the process data.
The diagnostic bit in the cyclic process data makes it easy to find problems with the equipment. It is possible to find problems with the equipment in real time using the cyclic (cycle) data and to monitor such problems in detail with the noncyclic (aperiodic) data.

</tbody>
</table>

Application Examples

For the predictive maintenance of cooling water problems
Monitors flow rate and temperature’s “switch ON/OFF signals” and “analog values” to determine the cooling status. The process and cooling status can be compared.

Display function
Displays the output communication status and indicates the presence of communication data

3-Color Display Digital Flow Switch for Water

### PF3W7-Z Series

#### How to Order

**PF3W 7** [04] - [03] - **AT** - **M** - **Z**

1. **Type**
   - 7 Integrated display

2. **Rated flow range (Flow range)**
   - Symbol | Rated flow range
   - 04 | 0.5 to 4 L/min
   - 20 | 2 to 16 L/min
   - 40 | 5 to 40 L/min
   - 11 | 10 to 100 L/min

3. **Flow adjustment valve**
   - Symbol
   - With/without flow adjustment valve | Rated flow range
   - Nil | None
   - S | Yes

4. **Thread type**
   - Nil
   - Rc
   - N
   - NPT
   - F
   - G

5. **Port size**
   - Symbol | Rated flow range
   - 03 | 3/8
   - 04 | 1/2
   - 06 | 3/4
   - 10 | 1/1

6. **Output specification/Temperature sensor**
   - Symbol | OUT1 | OUT2 | Temperature
   - A | NPN | — | —
   - B | PNP | — | —
   - C | NPN | Analog 1 to 5 V | —
   - D | NPN | Analog 4 to 20 mA | —
   - E | PNP | Analog 1 to 5 V | —
   - F | PNP | Analog 4 to 20 mA | —
   - G | NPN | External input^1 | —
   - H | PNP | External input^1 | —
   - AT | NPN (PNP) | — | —
   - BT | PNP (PNP) | — | —
   - CT | NPN | (Analog 1 to 5 V) | Analog 1 to 5 V
   - DT | NPN | (Analog 4 to 20 mA) | Analog 4 to 20 mA
   - ET | PNP | (Analog 1 to 5 V) | Analog 1 to 5 V
   - FT | PNP | (Analog 4 to 20 mA) | Analog 4 to 20 mA

7. **Lead wire (Option)**
   - Nil
   - N
   - With lead wire with M8 connector (3 m)
   - Without lead wire with M8 connector

8. **Integrated display/Unit specification**
   - Symbol
   - Instantaneous flow | Accumulated flow | Temperature
   - M | L/min | L | °C
   - G | gal/min | gal | °C
   - F | gal/min | gal | °F
   - J | L/min | L | °F

9. **Bracket (Option)**
   - Nil
   - With bracket

10. **Calibration certificate (Only for flow rate)**
    - Nil
    - A

#### Options/Part Nos.

When only optional parts are required, order with the part numbers listed below.

<table>

**Switch output**

- **Max. load current**: 80 mA
- **Max. applied voltage**: 28 VDC
- **Internal voltage drop**: NPN: 1 V or less (at load current of 80 mA), PNP: 1.5 V or less (at load current of 80 mA)
- **Response time**:<sup>12,8</sup> 0.5 s/1 s/2 s
- **Output protection**: Short-circuit protection
- **Output Flow rate mode**: Select from Hysteresis, Window comparator, Accumulated output, or Accumulated pulse output modes.
- **Output Temperature mode**: Select from Hysteresis mode or Window comparator mode.
- **Response time**: 0.5 s/1 s/2 s (linked with the switch output)
- **Voltage output**: Voltage output: 1 to 5 V
- **Current output**: Output current: 4 to 20 mA, Max. load impedance: 300 Ω for 12 VDC, 600 Ω for 24 VDC
- **Hysteresis**: Variable
- **External input**: Voltage free input: 0.4 V or less (Reed or Solid state), input for 30 ms or longer
- **Indicator light**: Output 1, Output 2: Orange
- **Power supply voltage**: 12 to 24 VDC ±10%
- **Current consumption**: 50 mA or less
- **Environmental resistance**
  - **Enclosure**: IP65
  - **Operating temperature range**: 0 to 50°C (No freezing or condensation)
  - **Operating humidity range**: Operation, Storage: 35 to 85% R.H. (No condensation)
  - **Withstand voltage**: 1000 VAC for 1 minute between terminals and housing
  - **Insulation resistance**: 50 MΩ or more (500 VDC measured via megohmmeter) between terminals and housing
- **Standards and regulations**
  - CE marking (EMC directive/ RoHS directive), UL (CSA)
- **Wetted parts material**<sup>1,8</sup> PPS, Stainless steel 304, FKM, SC 513
- **Piping port size**<sup>19</sup> 3/8 3/8, 1/2 1/2, 3/4 3/4, 1

**Weights**

- **Without temperature sensor/without flow adjustment valve**: 153 g 171 g 228 g 720 g
- **With temperature sensor/without flow adjustment valve**: 166 g 184 g 248 g 748 g
- **Without temperature sensor/with flow adjustment valve**: 241 g 259 g 429 g —
- **With temperature sensor/with flow adjustment valve**: 254 g 272 g 449 g —
- **With lead wire with connector**: +85 g

---

**Temperature Sensor Specifications**

| Rated temperature range | 0 to 100°C**11** |
| Set/Display temperature range | −10 to 110°C |
| Smallest settable increment | 1°C |
| Display unit | °C |
| Display accuracy | ±2°C |
| Analog output accuracy | ±3% F.S. |
| Response time | 7 s/12 |
| Ambient temperature characteristics | ±5% F.S. |

---

**1** Refer to the graph of measurable range for ethylene glycol aqueous solution on page 13. Measurement is possible as long as the fluid does not corrode the wetted parts and viscosity is 3 mPa·s (3 cP) or less. Be aware that water leakage may occur due to internal seal shrinkage or swelling depending on the type of fluid.

**2** If 0.5 s is selected for the response time of the switch output, the repeatability will be ±3% F.S.

**3** The operating pressure range and proof pressure may change according to the fluid temperature. Refer to the graphs on page 11.

**4** Cleared when the power supply is turned off. The hold function can be selected. (Intervals of 2 or 5 minutes can be selected.)

**5** If the 5-minute interval is selected, the life of the memory element (electronic parts) is limited to 1 million times. (If energized for 24 hours, life is calculated as 5 minutes x 1 million = 5 million minutes = about 9.5 years.) Therefore, if using the hold function, calculate the memory life for your operating conditions, and use within this life.

**6** The response time until the set value reaches 90% in relation to the step input (The response time is 7 s when it is output by the temperature sensor.)

**7** The response time when the temperature sensor is used, it will be 250 VAC.

**8** For details, refer to the “Wetted Parts Construction” on page 13.

**9** When the piping diameter or piping passage is restricted, the specifications may not be satisfied.

**10** Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.

For flow switch precautions and specific product precautions, refer to the Operation Manual on the SMC website.
How to Order

PF3W 5 04 - 03 - 1T - 00 Z

1 Type
5 Remote sensor unit

2 Rated flow range (Flow range)
Symbol | Rated flow range
--- | ---
04 | 0.5 to 4 L/min
20 | 2 to 16 L/min
40 | 5 to 40 L/min
11 | 10 to 100 L/min

3 Flow adjustment valve
Symbol | With/without flow adjustment valve | Rated flow range
--- | --- | ---
Nil | None | 04
None | None | 20
S | Yes | 40
11

4 Thread type
Nil | Rc
N | NPT
F | G*1

*1 ISO 228 compliant

5 Port size
Symbol | Port size | Rated flow range
--- | --- | ---
03 | 3/8
04 | 1/2
06 | 3/4
10 | 1/1

6 Output specification/Temperature sensor
Symbol | OUT1 | OUT2 | Temperature sensor
--- | --- | --- | ---
1 | Analog 1 to 5 V | — | None
2 | Analog 4 to 20 mA | — | —
1T | Analog 1 to 5 V | Analog 1 to 5 V | With temperature sensor

* To use in combination with remote monitor (PF3W3 series), select analog output of 1 to 5 V of flow rate (output symbol “-1” or “-1T”).

7 Lead wire (Option)
Nil | With lead wire with M8 connector (3 m)
N | Without lead wire with M8 connector

* The lead wire with M8 connector is interchangeable with the existing PF3W series.

8 Remote sensor unit/Unit printed on label
Symbol | Instantaneous flow | Temperature
--- | --- | ---
Nil | L/min | °C
G*1 | L/min (gal/min) | °C/F

*1 Under the New Measurement Act, units other than SI (symbol “Nil”) cannot be used in Japan.
* G: Made to order
Reference: 1 L/min ↔ 0.2642 gal/min
1 gal/min ↔ 3.785 L/min
°F = 9/5°C + 32

9 Bracket (Option)
Nil | None
R | With bracket

* Brackets are interchangeable with the existing PF3W series.

Calibration certificate (Only for flow rate)
Nil | None
A | With calibration certificate

* The certificate is written in both Japanese and English.
Units with temperature sensor can only display the flow rate.

Options/Part Nos.

When only optional parts are required, order with the part numbers listed below.

**Specifications (Remote Sensor Unit)**

- **Rated temperature range**: 0 to 100°C*1
- **Analog output accuracy**: ±3% F.S.
- **Response time**: 7 s*2
- **Ambient temperature characteristics**: ±5% F.S.

---

### Temperature Sensor Specifications

- **Rated temperature range**: 0 to 100°C*1
- **Analog output accuracy**: ±3% F.S.
- **Response time**: 7 s*2
- **Ambient temperature characteristics**: ±5% F.S.

---

- *1 Refer to the graph of measurable range for ethylene glycol aqueous solution on page 13. Measurement is possible as long as the fluid does not corrode the wetted parts and viscosity is 3 mPa·s (3 cP) or less. Be aware that water leakage may occur due to internal seal shrinkage or swelling depending on the type of fluid.
- *2 The operating pressure range and proof pressure may change according to the fluid temperature. Refer to the graphs on page 11.
- *3 The response time until the set value reaches 90% in relation to the step input (The response time is 7 s when it is analog output by the temperature sensor.)
- *4 When the temperature sensor is used, it will be 250 VAC.
- *5 For details, refer to the "Wetted Parts Construction" on page 13.
- *6 When the piping diameter or piping passage is restricted, the specifications may not be satisfied.
- Products with tiny scratches, marks, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.
**How to Order**

1. **Rated flow range (Flow range)**
   - **PF3W 7**
     - 04: 0.5 to 4 L/min
     - 20: 2 to 16 L/min
     - 40: 5 to 40 L/min
     - 11: 10 to 100 L/min

2. **Flow adjustment valve**
   - Symbol: With/without flow adjustment valve
     - Nil: None
     - S: Yes
   - Rated flow range
     - 04: 0.5 to 4 L/min
     - 20: 2 to 16 L/min
     - 40: 5 to 40 L/min
     - 11: 10 to 100 L/min

3. **Thread type**
   - Nil: None
   - N: NPT
   - F: G

4. **Piping port size**
   - Symbol: Port size
     - 03: 3/8
     - 04: 1/2
     - 06: 3/4
     - 10: 1
     - 12: 1-1/4
     - 14: 1-1/2
   - Rated flow range
     - 04: 0.5 to 4 L/min
     - 20: 2 to 16 L/min
     - 40: 5 to 40 L/min
     - 11: 10 to 100 L/min

5. **Output specification/Temperature sensor**
   - Symbol: OUT1 OUT2
     - Flow rate/Temperature
     - Flow rate/Temperature
     - Temperature sensor
       - L: IO-Link/Switch output (N/P)
       - L2: IO-Link/Switch output (N/P)
       - LT: IO-Link/Switch output (N/P)
       - L2T: IO-Link/Switch output (N/P)
   - L: None
   - L2, L2T: Yes

6. **Integrated display/Unit specification**
   - Symbol: Instantaneous flow/accumulated flow/Temperature
     - Nil: None
     - With display unit switching function
   - Instantaneous flow: L/min→gal/min
     - Accumulated flow: L→gal
   - °C
   - Reference: 1 [L/min]↔0.2642 [gal/min]
     - 1 [gal/min]↔3.785 [L/min]

7. **Bracket (Option)**
   - Nil: None
   - R: With bracket

8. **Calibration certificate (Only for flow rate)**
   - Nil: None
   - A: With calibration certificate

<sup>1</sup> Cleared when the power supply is turned off
The hold function can be selected. If the 5-minute interval is selected, the life of the memory element (electronic parts) is limited to 3.7 million times. (If energized for 24 hours, life is calculated as 5 minutes x access times (3.7 million) = 18.5 million minutes = about 35 years.) Therefore, if using the hold function, calculate the memory life for your operating conditions, and use within this life.

<sup>2</sup> Does not include the value of the digital filter

<sup>3</sup> The response time until the set value reaches 90% in relation to the step input (The response time is 7 s when it is output by the temperature sensor.)

<sup>1</sup> The configuration file can be downloaded from the SMC website, https://www.smcworld.com

<sup>2</sup> The device ID differs according to each product type (flow range, whether or not a temperature sensor is provided, etc.).
**PF3W-Z/L Series**

### Set Flow Range and Rated Flow Range

**Caution**

Set the flow rate within the rated flow range. The set flow range is the range of flow rate within which setting is possible. The rated flow range is the range within which the sensor specifications (accuracy, etc.) are satisfied. It is possible to set a value outside of the rated flow range if it is within the set flow range. However, the satisfaction of the specifications cannot be guaranteed.

<table>

**PF3W711(-L)/511**

**PF3W721(-L)**
**Flow Rate Characteristics (Pressure Loss: Without Flow Adjustment Valve)**

- **PF3W704(-L)/504**
  - Pressure: 0.3 MPa
  - Piping diameter: ø12

- **PF3W720(-L)/520**
  - Pressure: 0.3 MPa
  - Piping diameter: ø12

- **PF3W740(-L)/540**
  - Pressure: 0.3 MPa
  - Piping diameter: ø16

**Straight Piping Length and Accuracy (Reference Value)**

- The smaller the piping size, the more the product is affected by the straight piping length.
- Fluid pressure has almost no affect.
- Low flow rate lessens the effect of the straight piping length.
- Use a straight pipe that is 8 cm or longer in length to satisfy the ±3% F.S. specification.
  (11 cm or longer for the 100 L/min type)

- **PF3W704(-L)/504**

Temperature Sensor Specifications

| Rated temperature range | 0 to 100°C |
| Set/Display temperature range | –10 to 110°C |
| Smallest settable increment | 1°C |
| Display unit | °C |
| Analog output accuracy | ±3% F.S. |
| Response time | 7 s/² |
| Ambient temperature characteristics | ±5% F.S. |

1. The output related to the temperature sensor is OUT2 only.

2. The OUTF2 can be selected from either the output for temperature or flow rate by button operation.

3-Color Display Digital Flow Switch for Water PF3W3 Series

3-Color Display Digital Flow Monitor for Water PF3W3 Series

3-Color Display IO-Link Compatible Digital Flow Monitor for Water PF3W7-L Series

3-Color Display IO-Link Compatible Digital Flow Switch for Water PF3W7-L Series

For flow switch precautions and specific product precautions, refer to the Operation Manual on the SMC website.

Reference:
- PF3W30...: Series of Digital Flow Switches
- PF3W3...: Series of Digital Flow Monitors
- PF3W7-L: Series of Digital Flow Monitors with IO-Link Compatibility

Technical Notes:
- The output related to the temperature sensor is OUT2 only.
- The OUTF2 can be selected from either the output for temperature or flow rate by button operation.
- The output related to the temperature sensor is OUT2 only.
- The OUTF2 can be selected from either the output for temperature or flow rate by button operation.

For flow switch precautions and specific product precautions, refer to the Operation Manual on the SMC website.
Internal Circuits and Wiring Examples

-A  NPN (2 outputs)

-B  PNP (2 outputs)

-C/D  C: NPN + Analog voltage output  D: NPN + Analog current output

-E/F  E: PNP + Analog voltage output  F: PNP + Analog current output

Accumulated pulse output wiring examples

-B/E/F/H  B: PNP (2 outputs)  E, F: PNP + Analog output  G: PNP + External input

PF3W-Z/L Series
Function Details

Integrated Display (PF3W7-Z Series) / IO-Link Compatible (PF3W7-L Series)

■ Delay time setting (PF3W7-L series only)

The time from when the instantaneous flow reaches the set value to when the switch output operates can be set. Setting the delay time can prevent the switch output from chattering.

The total switching time is the switch operation time and the set delay time.
(Default setting: 0 s)

<table>
<thead>
<tr>
<th>Delay time setting</th>
<th>PF3W7-Z series</th>
<th>PF3W7-L series</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>1 to 10 s</td>
<td>1 to 10 s</td>
<td>1 to 10 s</td>
</tr>
</tbody>
</table>

■ Output operation

The output operation can be selected from the following:
- Output (hysteresis mode and window comparator mode) corresponding to instantaneous flow rate, output corresponding to accumulated flow, or accumulated pulse output.
- At the time of shipment from the factory, it is set to hysteresis mode and normal output.

■ Display color

The display color can be selected for each output condition. The selection of the display color provides visual identification of abnormal values.

- Green for ON, Red for OFF
- Red for ON, Green for OFF
- Green all the time
- Red all the time

■ Response time (Digital filter)

The response time (digital filter) can be set to suit the application. Setting the response time (digital filter) can reduce chattering of the switch output and flickering of the analog output and the display. The response time indicates when the set value is 90% in relation to the step input.

* The temperature sensor output is fixed to 7 s.

<table>

■ Display

Display layout for PF3W7-Z series and PF3W7-L series is different.

■ Power-saving mode

The display can be turned off to reduce power consumption.
In power-saving mode, only decimal points blink.
If any button is pressed during power-saving mode, the display is recovered for 30 seconds to check the flow, etc.

■ Setting of security code

The user can select whether a security code must be entered to release the key lock. At the time of shipment from the factory, it is set such that a security code is not required.

■ External input function (PF3W7-Z series only)

This function can be used only when the optional external input is present. The accumulated flow, peak value, and bottom value can be reset remotely.

Accumulated value external reset: A function to reset the accumulated flow value when an external input signal is applied.
In accumulated increment mode, the accumulated value will reset to and increase from zero.
In accumulated decrement mode, the accumulated value will reset to and decrease from the set value.

- When the accumulated value is stored to memory, every time the accumulated value external reset is activated, the memory (EEPROM) will be accessed. Take the life time of the memory device into consideration before using this function.
Peak/Bottom value reset: Peak and bottom value are reset.

■ Forced output function

The output is turned on/off in a fixed state when starting the system or during maintenance. This enables the confirmation of wiring and prevents system errors due to unexpected output.
For the analog output type, when ON the output will be 5 V or 20 mA, and when OFF, it will be 1 V or 4 mA.
For IO-Link compatible PF3W7-L series. Diagnostic bit (error, flow rate, and temperature), process data (PD) flow, and temperature measurement can be checked.

- Also, an increase or decrease of the flow and temperature will not change the on/off status of the output while the forced output function is activated.

■ Accumulated value hold

The accumulated value is not cleared even when the power supply is turned off.

The accumulated value is memorized every 2 or 5 minutes during measurement and continues from the last memorized value when the power supply is turned on again.
The maximum writable limit of the memory device is 1 million times for PF3W7-Z and 3.7 million times for PF3W7-L, which should be taken into consideration.

■ Forced output function

The output is turned on/off in a fixed state when starting the system or during maintenance. This enables the confirmation of wiring and prevents system errors due to unexpected output.
For the analog output type, when ON the output will be 5 V or 20 mA, and when OFF, it will be 1 V or 4 mA.
For IO-Link compatible PF3W7-L series. Diagnostic bit (error, flow rate, and temperature), process data (PD) flow, and temperature measurement can be checked.

- Also, an increase or decrease of the flow and temperature will not change the on/off status of the output while the forced output function is activated.

■ Accumulated value hold

The accumulated value is not cleared even when the power supply is turned off.

The accumulated value is memorized every 2 or 5 minutes during measurement and continues from the last memorized value when the power supply is turned on again.
The maximum writable limit of the memory device is 1 million times for PF3W7-Z and 3.7 million times for PF3W7-L, which should be taken into consideration.

Peak/Bottom value reset: Peak and bottom value are reset.

■ Forced output function

The output is turned on/off in a fixed state when starting the system or during maintenance. This enables the confirmation of wiring and prevents system errors due to unexpected output.
For the analog output type, when ON the output will be 5 V or 20 mA, and when OFF, it will be 1 V or 4 mA.
For IO-Link compatible PF3W7-L series. Diagnostic bit (error, flow rate, and temperature), process data (PD) flow, and temperature measurement can be checked.

- Also, an increase or decrease of the flow and temperature will not change the on/off status of the output while the forced output function is activated.

■ Accumulated value hold

The accumulated value is not cleared even when the power supply is turned off.

The accumulated value is memorized every 2 or 5 minutes during measurement and continues from the last memorized value when the power supply is turned on again.
The maximum writable limit of the memory device is 1 million times for PF3W7-Z and 3.7 million times for PF3W7-L, which should be taken into consideration.

■ Display

Display layout for PF3W7-Z series and PF3W7-L series is different.
### Integrated Display (PF3W7-Z Series) / IO-Link Compatible (PF3W7-L Series)

#### Analog output free range function (PF3W7-Z series only)

This function allows a flow that generates an output of 5 V or 20 mA to be changed. (This function is not available for the analog output to the temperature.) This function is available if the analog output type is used. The value can be changed between 10% of the maximum value of the rated flow and the maximum value of the display range.

#### Error display function

When an error or abnormality arises, the location and contents are displayed.

<table>
<thead>

</table>

If the error cannot be solved after the instructions above are performed, please contact SMC for investigation.
Remote Sensor Unit (PF3W5-Z Series)

- **POWER indicator function**
  It is possible to check whether power supply is reaching the product. When power is supplied to the product, the indicator lights up green.

- **FLOW indicator function**
  Status of the flow rate can be checked visually. When the flow rate increases, the green lamp blinks faster. When below the measurable lower limit of flow rate, the lamp turns off, when above the measurable upper limit of flow rate, red lamp turns on.

- **Error display function**
  When an error or abnormality arises, the location and contents are displayed.

**Safety Instructions**

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\(^1\), and other safety regulations.

| **Caution:** | Indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury. |
| **Warning:** | Indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury. |
| **Danger:** | Indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury. |

---

**Warning**

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
   
   Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.
   
   The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.
   
   The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
   
   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
   4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

---

**Caution**

1. The product is provided for use in manufacturing industries.
   
   The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

**Limited warranty and Disclaimer/Compliance Requirements**

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

**Limited warranty and Disclaimer**

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\(^2\)
   
   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
   
   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

   \(^2\)Vacuum pads are excluded from this 1 year warranty.

---

**Compliance Requirements**

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

---

**Caution**

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

---

**Safety Instructions**

Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
