# Series SQ2000 Plug-in Manifold

### How to Order Manifold

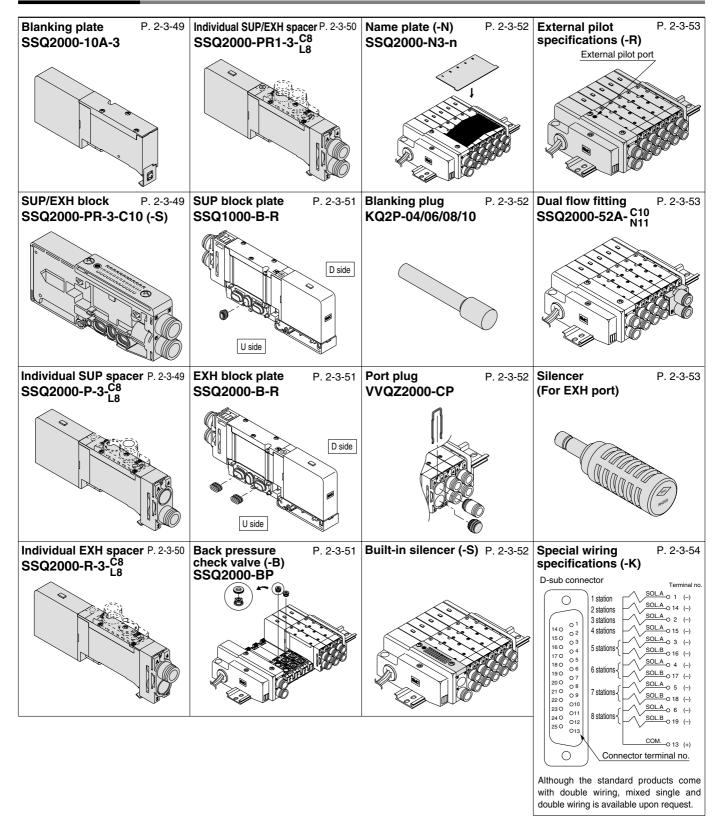

Note 1) Separately order the 20P type cable assembly for the P kit.

Note 2) The maximum number of stations should not be more than the maximum number of solenoids. (The number of solenoids are counted as: 1 for single solenoids and 2 for type 3P and 4P double solenoids.)

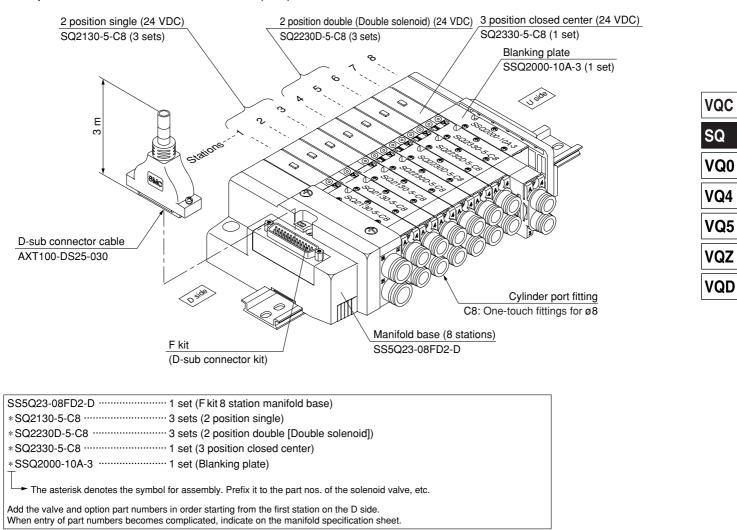

# Series SQ2000

# Plug-in Unit Series SQ1000/2000

#### SUP block plate

#### SSQ1000-B-R

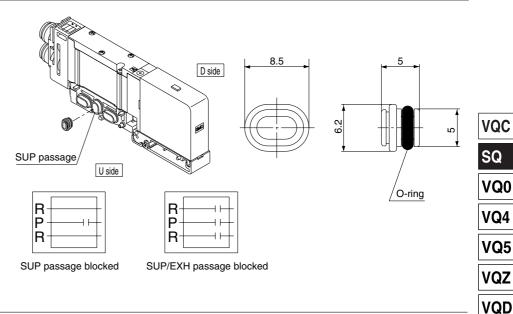

When supplying two different pressures, high and low, to one manifold, this is used between stations with different pressures. Also, it is used with an individual SUP spacer to shut off the air supply.

\* Specify the station position on the manifold specification sheet.

#### <Shut off label>

When a SUP passage is shut off with a SUP block plate, a label is attached for external confirmation of the shut off position (one label each).

\* Shut off labels are applied when SUP block plates are ordered with manifolds.

#### EXH block plate

#### SSQ2000-B-R

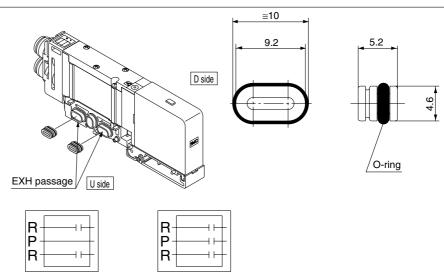

When the exhaust from a valve interferes with other stations in the circuit, this is used between stations to separate exhausts. Also, it is used with an individual EXH spacer to shut off the exhaust of individual valves.

\* Specify the station position on the manifold specification sheet.

#### <Shut off label>

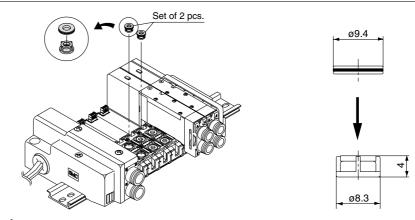

When an EXH passage is shut off with an EXH block plate, a label is attached for external confirmation of the shut off position (one label each).

\* Shut off labels are applied when EXH block plates are ordered with manifolds.

EXH passage blocked

SUP/EXH passage blocked

# \land Caution

- 1. Although the back pressure check valve is an assembly part with a check valve mechanism, a small amount of air leakage is allowed. Therefore, take care not to restrict the exhaust air from the exhaust port.
- 2. The effective area of valves is about 20% less when the back pressure check valve is installed.

# Back pressure check valve [-B]

#### SSQ2000-BP

This prevents cylinder malfunction caused by the exhaust from other valves. It is inserted into the R (EXH) port of the valve that is affected. It is especially effective when using single acting cylinders or exhaust center type solenoid valves.

- \* When installing back pressure check valves only on the stations required, enter the part number and specify the mounting stations on a manifold specification sheet.
- \* When installing back pressure check valves on all of the stations, indicate "-B" at the end of the manifold part number.

### Manifold Option Parts for SQ2000

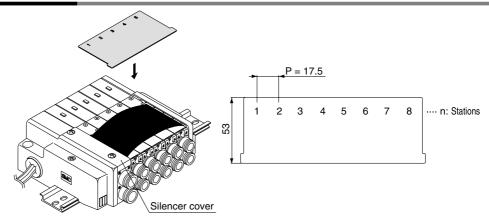

#### Name plate [-N]

#### SSQ2000-N3- Stations (1 to maximum)

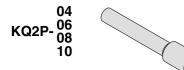

This is a clear resin plate for applying solenoid valve function description labels, etc.

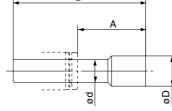

To install, bend the plate slightly as shown and insert into the slots on the end plate side. Also, the plate is difficult to bend for manifolds with only a few stations, therefore, remove the silencer cover to install it.

\* When ordering with manifolds, add "-N" at the end of the manifold number.

#### Blanking plug (For One-touch fitting)

#### **Dimensions**

Applicable fittings size ød	Model	A	L	D
4	KQ2P-04	16	32	6
6	KQ2P-06	18	35	8
8	KQ2P-08	20.5	39	10
10	KQ2P-10	22	43	12

This is inserted into cylinder ports and SUP and EXH ports that are not used. Purchasing order is available in units of 10

pieces.

#### Port plug

#### VVQZ2000-CP

This is used to close the cylinder ports when changing a 5 port valve to a 3 port valve.

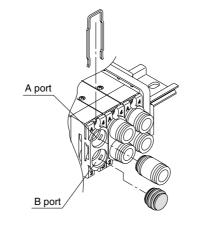

\* Add "A" or "B" at the end of the valve part number when ordering with valves. Example) SQ2131-5-C8-A (N.O. specifications)

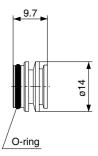

4 (A) port plug

Example) SQ2131-5-C8-B (N.C. specifications)

2 (B) port plug

Example) SQ2131-5-C8-B-M (B port plug with manifold block)

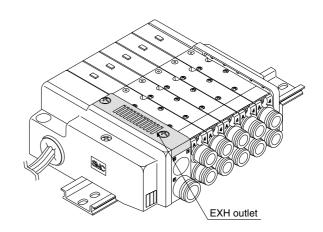

#### Direct EXH outlet, built-in silencer [-S]

The EXH outlet is placed on the top side of the manifold end plate. The built-in silencer provides highly effective noise reduction. (Noise reduction of 30 dB)

Note) Note that when excessive drainage occurs in the air supply, the drainage will be released along with the exhaust.

- \* Add "-S" at the end of the manifold part number when ordering with manifolds.
- \* For precautions on handling and how to replace elements, refer to page 2-3-5.

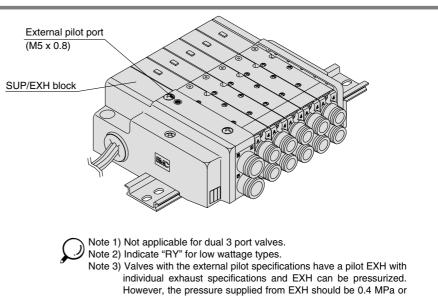

# Plug-in Unit Series SQ1000/2000

#### **External pilot specifications [-R]**

This can be used when the air pressure is 0.1 to 0.2 MPa lower than the minimum operating pressure of the solenoid valves or used for vacuum specifications.

Add "R" to the part numbers of manifolds and valves to indicate the external pilot specifications. An M5 port will be installed on the top side of the manifold's SUP/EXH block.

- How to order valves (Example) SQ2130 <u>R</u> -5-C6
  - External pilot specifications
- How to order manifold (Example)
  Indicate "R" for an option.
  SS5Q23-08FD1-DR
  - External pilot specifications

Dual flow fitting

# SSQ2000-52A- C10

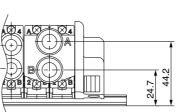

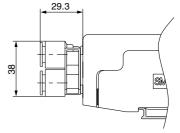

To drive a large bore cylinder, two valve stations are operated simultaneously to double the air flow. This fitting is used on the cylinder ports in this situation. Available sizes are ø10 and ø3/8" One-touch fittings.

- \* When ordering with valves, specify the valve part number without One-touch fitting and list without One-touch fitting and list the dual flow fitting part number.
- Example) Valve part number (without One-touch fitting)
- SQ2131-5 C0 ..... 2 sets
- \* SSQ2000- 52A C10 ...... 1 set

lower.

C10: One-touch fitting for ø10 N11: One-touch fitting for ø3/8"

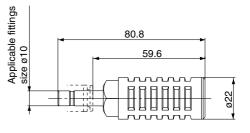

#### Silencer (For EXH port)

This is inserted into the centralized type EXH port (One-touch fitting).

### Manifold Option Parts for SQ1000/SQ2000

#### **Special Wiring Specifications**

In the internal wiring of F kit, P kit, J kit, T kit and S kit, double wiring (connected to SOL. A and SOL. B) is adopted for each station regardless of the valve and option types. Mixed single and double wiring is available as an option.

#### 1. How to Order

Indicate option symbol "-K" in the manifold part number and be sure to specify station positions for single or double wiring on the manifold specification sheet. Also, specify wiring for spare connectors.

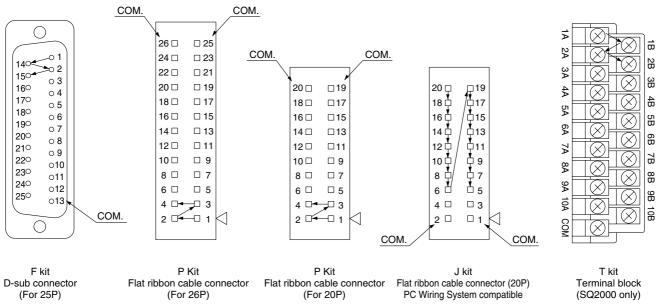

(Up to two spare connectors are included depending on the remaining number of connector pins. When the wiring for the spare connectors is not specified, they will be wired according to "Spare Connector Wiring" on page 2-3-57.)

#### Example) SS5Q13 - 09 FD0 - DKS

• Others, option symbols: to be indicated alphabetically.

#### 2. Wiring specifications

Connector terminal numbers are connected from solenoid station 1 on the A side in the order indicated by the arrows without skipping any terminal numbers.

For S kit (serial transmission kit), refer to pages 2-3-20 and 2-3-40.

#### 3. Maximum stations

The maximum number of manifold stations is determined by the number of solenoids. Count one point for a single solenoid type and two points for a double solenoid type. Determine the number of stations so that the total number of solenoids is no more than the maximum points in the table below.

Kit	F kit (D-sub connector)	P kit (Flat ribbon cable connector)		J kit Flat ribbon cable PC Wiring System compatible	T kit (Terminal block) SQ2000 only*	S kit (Serial)
Туре	FD□ 25P	PD□ 26P	PDC 20P	JD0 20P	TD0	SD□
Max. points	24 points	24 points	18 points	16 points	20 points	16 points

Note) Maximum stations ---- SQ1000: 24 stations SQ2000: 16 stations

#### Special DIN Rail Length (DIN rail mounting (-D) only)

The standard DIN rail provided is approximately 30 mm longer than the overall length of the manifold with a specified number of stations. The following options are also available.

#### DIN rail length longer than the standard type (for stations to be added later, etc.)

In the manifold part number, specify "-D" for the manifold mounting symbol and add the number of required stations after the symbol.

#### Example) SS5Q13-08FD0-D09BNK

8 station manifold

 Option symbols (alphabetically)

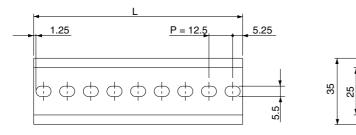

#### DIN rail for 9 stations

#### Ordering DIN rail only

DIN rail part number

Note) For "n", enter a number from the "No." line in the table below. For L dimension, refer to the dimensions of each kit.

7.5

#### **Direct Mounting Style (-E)**

Manifold is mounted by using mounting holes of both sides of the manifold. DIN rail is not sticking out of the edge of end plate.

### Manifold Option for SQ1000/SQ2000

#### **Negative Common Specifications**

The following valve part numbers are for negative common specifications. Manifold part numbers are the same as the standard except L kit. Also, negative COM specifications are not available for the S kit.

#### • How to order negative COM valves (Example)

### How to Add Manifold Stations for SQ1000/SQ2000

#### 1. Using Spare Connector to Add Stations

As shown in the table below, wiring specifications for spare connectors are based on to the remaining number of connector pins (remaining number of pins against the maximum number of solenoids for each kit.) The following steps are for using spare connectors to add stations.

#### **Spare Connector Wiring**

Remaining connector pins	4 pins or more	3 pins	2 pins	1 pin	0 pin	VQC
Spare connector wiring	2 for double wiring	1 for double wiring (on the low no. station side) 1 for single wiring	1 for double wiring	1 for single wiring	None	SQ

#### What to order

• Valves with manifold block (refer to pages 2-3-7 and 2-3-25) or the manifold blocks (Refer to page 2-3-58)>

#### Steps for adding stations

(1) Loosen the clamp screw on the U side end plate and open the manifold.

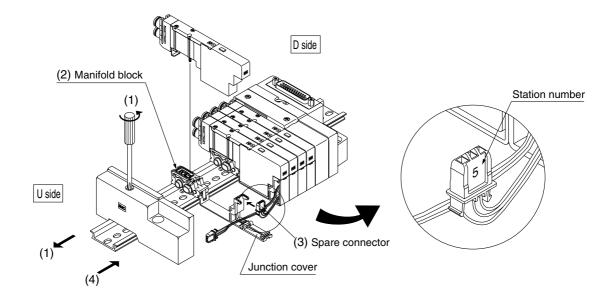

(2) Mount the manifold block to be added.

(3) Open the junction cover and attach the spare connector. Match the station position of the added station and the spare connector station number.

(4) Press on the end plate to eliminate any space between the manifold blocks and tighten the clamp screw. (Proper tightening torque: 0.8 to 1.0 N·m)

Note 1) Order a manifold block with lead wire for the L kit because a spare connector is not included with the kit. (Refer to page 2-3-58.)

Note 2) Do not let the lead wires get caught between manifolds, or when closing the junction cover.

VQD

### How to Add Manifold Stations for SQ1000/SQ2000

#### 2. Adding Stations Without Required Spare Connectors

Spare connectors for 2 stations are initially included. However, to add 3 or more stations, order manifold blocks with lead wire in the tables below.

#### How to Order Manifold Blocks with Lead Wire

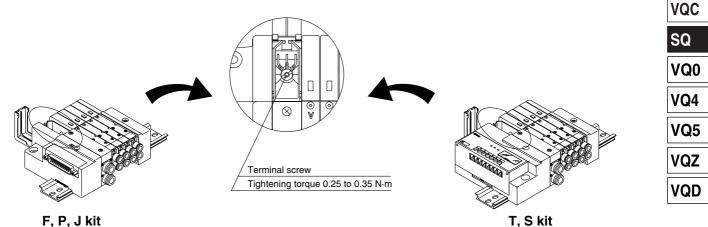

#### 3. Connection Method (Refer to page 2-3-57 regarding the steps for adding stations to a manifold block.)

Connect the round terminal of the red lead wire to the common terminal inside the junction cover.

#### (1) Connecting common terminals

Connect lead wire assemblies included with manifold blocks as follows.

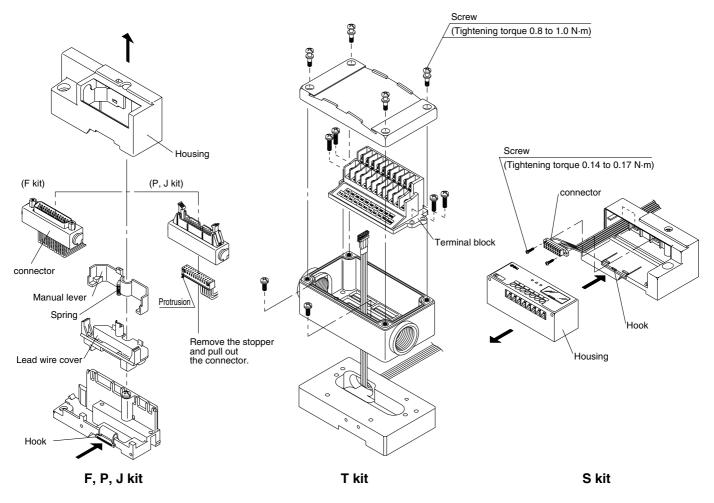

#### (2) Pulling out connector

Pull out the connector to connect the lead wire.

- For F, P, and J kits, pull out and remove the housing while pressing down hard on the hook with a flat head screwdriver, etc. Remove the manual lever and lead wire cover, and pull out the connector.
- For T kits, remove the screws and pull out the terminal block.
- For S kits, remove the screws and pull out the connector.

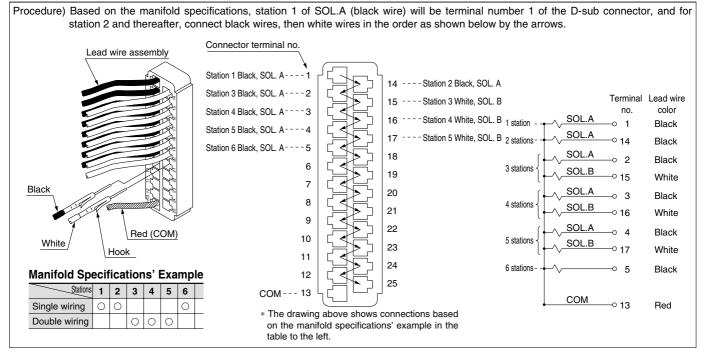

### How to Add Manifold Stations for SQ1000/SQ2000

(3) Connect the black and white lead wire pins to the positions shown below in accordance with each kit.

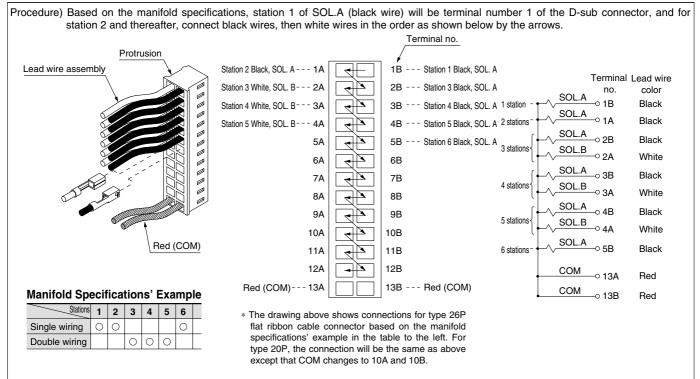

Caution 1. After inserting the pin, confirm that the pin hook is locked by lightly pulling the lead wire.

2. Do not pull the lead wire forcefully when connecting. Also, take care that lead wires do not get caught between manifolds or when closing the junction cover.
