

# Steam Valve

## VND Series

### 2 Port Valve for Steam

2 Port Valve for Steam Max. **180°C**

**By adopting of PTFE seal,  
the valve is suited for steam.**

Body material: Bronze, Stainless steel

**Large valve capacity**

**Wide variations**

2 types — N.C., N.O.

Threaded type (6A to 50A)

Flange type (32F to 50F)

**With indicator (Option)**

Selectable with indicator (for visual verification of operation)

**Cylinder actuation  
by external pilot air**

**PTFE seal**

Note) The companion flange is JIS B 2210 10K (standard) or its equivalent.

## Valve Specifications

<b>Fluid (Main piping)</b>		Steam	
<b>Fluid temperature</b>		-5 to 180°C <sup>Note 1)</sup>	
<b>Ambient temperature</b>		-5 to 60°C <sup>Note 1)</sup>	
<b>Proof pressure</b>		1.5 MPa	
<b>Operating pressure range</b>		0 to 0.97 MPa	
<b>External pilot air</b>	<b>Pressure</b>	N.C.	0.3 to 0.7 MPa
		N.O.	0.1 + 0.25 x (Operating pressure) to 0.25 + 0.25 x (Operating pressure) MPa Refer to below "Graph (1)".
	<b>Lubrication</b>	Not required	
	<b>Temperature</b>	-5 to 60°C <sup>Note 1)</sup>	
<b>Mounting orientation</b>		Unrestricted	

Note 1) No freezing

Note 2) Non-lubricant specifications are not available for this product.

## Construction

### Component Parts

No.	Description	Material	Note
1	Body	Bronze*	Clear coated
2	Cover assembly	Aluminum alloy	Platinum silver painted
3	Plate assembly	Brass*	PTFE, EPR, FKM
4	Valve element	Brass*, PTFE	—
5	Piston assembly	Aluminum alloy	—
6	Return spring	Piano wire	—
7	Second plate assembly	Aluminum alloy	—

\* Body option S is made of stainless steel.

### Working Principle

#### VND□0□□ (N.C.)

When fluid is exhausted from the port 12(P1), the valve (4) connected with the piston (5) is closed by the return spring (6).

#### • When valve opens

When pressurized air enters through the port 12(P1), the valve piston moves upward by the pilot air that enters below the piston and the valve element opens.

#### • When valve closes

When fluid is exhausted from the port 12(P1), the pilot air below the piston is exhausted and the valve element is closed by the return spring.

#### VND□02□□ (N.O.)

In contrast with the N.C., when air is exhausted from the port 10(P2), the return spring opens the valve element. Pressurized air that enters through the port 10(P2) closes the valve element.

# VND Series Specific Product Precautions

Be sure to read this before handling the products.  
Refer to back page 50 for Safety Instructions and pages 17 to 19 for 2 Port Solenoid Valve for Fluid Control Precautions.

## External Pilot

### ⚠ Caution

**Pilot port 12(P1) and 10(P2) piping**  
P1 and P2 piping should be as follows according to the model.

Port	VND□O□D	VND□O2D
12(P1)	External pilot	Bleed port
10(P2)	Bleed port	External pilot

Installing a silencer to the exhaust port and the bleed port is recommended for noise reduction and for dust entry prevention.

## Piping

### ⚠ Caution

To use the piping with a high temperature fluid, use heat resistant fittings and tubing (Self-align fittings, PTFE tubing or Copper piping, etc.).

## Adiabatic Space

### ⚠ Caution

There is a space between body and cover (\*: approximate 1 mm) for adiabatic effect.
