Series VQZ Safety Instructions

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by labels of **"Caution"**, **"Warning"** or **"Danger"**. To ensure safety, be sure to observe ISO 4414 ^{Note 1}, JIS B 8370 ^{Note 2} and other safety practices.

Explanation of the Labels

Labels	Explanation of the labels		
\land Danger	In extreme conditions, there is a possible result of serious injury or loss of life.		
\land Warning	Operator error could result in serious injury or loss of life.		
A Caution	Caution Operator error could result in injury Note 3) or equipment damage. Note 4)		

Note 1) ISO 4414: Pneumatic fluid power – General rules relating to systems

Note 2) JIS B 8370: General Rules for Pneumatic Equipment

Note 3) Injury indicates light wounds, burns and electrical shocks that do not require hospitalization or hospital visits for long-term medical treatment. Note 4) Equipment damage refers to extensive damage to the equipment and surrounding devices.

■ Selection/Handling/Applications

1. The compatibility of the pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.

Since the products specified here are used in various operating conditions, their compatibility for the specific pneumatic system must be based on specifications or post analysis and/or tests to meet the specific requirements. The expected performance and safety assurance are the responsibility of the person who has determined the compatibility of the system. This person should continuously review the suitability of all items specified, referring to the latest catalog information with a view to giving due consideration to any possibility of equipment failure when configuring a system.

- 2. Only trained personnel should operate pneumatically operated machinery and equipment. Compressed air can be dangerous if handled incorrectly. Assembly, handling or repair of the systems using pneumatic equipment should be performed by trained and experienced operators. (Understanding JIS B 8370 General Rules for Pneumatic Equipment, and other safety rules are included.)
- 3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.
 - 1. Inspection and maintenance of machinery/equipment should only be performed once measures to prevent falling or runaway of the driven objects have been confirmed.
 - When equipment is removed, confirm the safety process as mentioned above. Turn off the supply pressure for this equipment and exhaust all residual compressed air in the system, and release all the energy (liquid pressure, spring, condenser, gravity).
 Before machinery/equipment is restarted, take measures to prevent quick extension of a cylinder piston rod, etc.
- 4. If the equipment will be used in the following conditions or environment, please contact SMC first and be sure to take all necessary safety precautions.
 - 1. Conditions and environments beyond the given specifications, or if product is used outdoors.
 - 2. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, clutch and brake circuits in press applications, or safety equipment.
 - An application which has the possibility of having negative effects on people, property, requiring special safety analysis.
 If the products are used in an interlock circuit, prepare a double interlock style circuit with a mechanical protection function for the prevention of a breakdown. And, examine the devices periodically if they function normally or not.

Exemption from Liability

- 1. SMC, its officers and employees shall be exempted from liability for any loss or damage arising out of earthquakes or fire, action by a third person, accidents, customer error with or without intention, product misuse, and any other damages caused by abnormal operating conditions.
- 2. SMC, its officers and employees shall be exempted from liability for any direct or indirect loss or damage, including consequential loss or damage, loss of profits, or loss of chance, claims, demands, proceedings, costs, expenses, awards, judgments and any other liability whatsoever including legal costs and expenses, which may be suffered or incurred, whether in tort (including negligence), contract, breach of statutory duty, equity or otherwise.
- 3. SMC is exempted from liability for any damages caused by operations not contained in the catalogs and/or instruction manuals, and operations outside of the specification range.
- 4. SMC is exempted from liability for any loss or damage whatsoever caused by malfunctions of its products when combined with other devices or software.

Be sure to read this before handling.

For Safety Instructions and 3 Port Solenoid Valve Precautions, refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A).

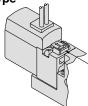

Manual Override

ACaution

Without an electric signal for the solenoid valve the manual override is used for switching the main valve. Push type is standard. Locking type (Tool required) is available as an option.

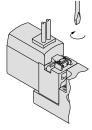

1. VQZ100

Press in the direction of the arrow.

Locking type (Tool required)

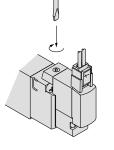

Turn 90° in the direction of arrow.

2. VQZ200/300

Push type (Tool required)

Push down on the manual override button with a small screwdriver until it stops. Release the screwdriver and the manual override will return.

Locking type (Tool required)

Push down completely on the manual override button with a small screwdriver. While down, turn clockwise 90° to lock it. Turn it counterclockwise to release it.

Locked position

Precautions

When operating with a screwdriver, turn it gently using a watch-maker's screwdriver. (Torque: less than 0.1 N-m)

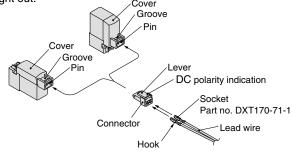

Press and rotate to lock the manual operation of VQZ200/300. If rotate without pressing, manual breakage and air leakage could be occurred.

How to Use L/M-Type Plug Connector

A Caution

1. Attaching and detaching connectors

To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve and remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

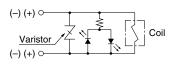

Light/Surge Voltage Suppressor

Caution

1. L/M-type plug connector

<DC>

<AC>

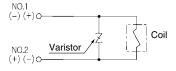

2. DIN terminal

<DC>

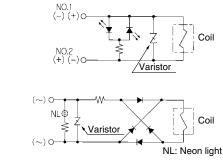

<AC>

With light (YZ)

With surge voltage suppressor (YS, YOS)

Light/surge voltage suppressor (YZ)

Note) Surge voltage suppressor of varistor has residual voltage corresponding to the protective element and rated voltage; therefore, protect the controller side from the surge.

Be sure to read this before handling.

For Safety Instructions and 3 Port Solenoid Valve Precautions, refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A).

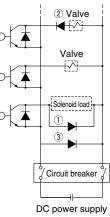

Light/Surge Voltage Suppressor

ACaution

1. Surge voltage countermeasures

When shutting off the DC power supply using an emergency circuit breaker, the valve may operate incorrectly due to surge voltage generated by other electric parts (e.g., the solenoid). To ensure that surge does not affect the valve, take anti-surge measures (diode for surge protection, etc.) or use a valve with diode to prevent reverse current. (Contact SMC for model numbers.)

 (1), (3): Examples of anti-surge measures
 (2): Valve equipped with diode to prevent reverse current

Lead Wire Connection

ACaution

1. Crimping of lead wires and sockets

Not necessary if ordering the lead wire pre-connected model. Strip 3.2 to 3.7 mm at the end of the lead wires, insert the ends of the core wires evenly into the sockets, and then crimp with a crimping tool. When this is done, take care that the coverings of the lead wires do not enter the core wire crimping area.

Crimping tool part no. DXT170-75-1

Lead Wire Connection

ACaution

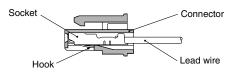

2. Attaching and detaching sockets with lead wires

Attaching

Insert the sockets into the square holes of the connector (\oplus , \ominus indication), and continue to push the sockets all the way in until they lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then, confirm that they are locked by pulling lightly on the lead wires.

Detaching

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

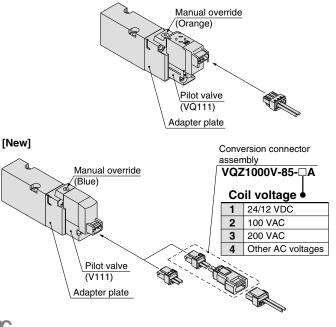

Pilot Valve Replacement

ACaution

1. When replacing a conventional type valve with a new type for maintenance or other reasons, a "conversion connector assembly" is necessary to convert the connector from 3 terminals to 2 terminals and must be ordered separately. (When ordering, refer to the below part nos.)

For pilot valves, there is no compatibility between the conventional type and new type. When replacing a pilot valve, be sure to confirm whether it is the new type or the conventional type.

[Conventional]

Be sure to read this before handling.

For Safety Instructions and 3 Port Solenoid Valve Precautions, refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A).

How to Use DIN Terminal

1. EN-175301-803C (Former DIN 43650C)

The DIN terminal type with an IP65 enclosure is protected against dust and water, however, it must not be used in water.

2. Connection

- 1) Loosen the holding screw and pull the connector out of the solenoid valve terminal block.
- 2) After removing the holding screw, insert a flat head screwdriver, etc. into the notch on the bottom of the terminal block and pry it open, separating the terminal block and the housing.
- 3) Loosen the terminal screws (slotted screws) on the terminal block, insert the cores of the lead wires into the terminals according to the connection method, and fasten them securely with the terminal screws.
- 4) Secure the cord by fastening the ground nut.

3. Changing the entry direction

After separating the terminal block and housing, the cord entry can be changed by attaching the housing in the desired direction (4 directions at 90° intervals).

* When equipped with a light, be careful not to damage the light with the cord's lead wires.

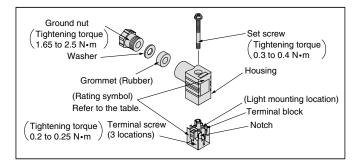

4. Precautions

Plug in and pull out the connector vertically without tilting to one side.

5. Compatible cable

Cable O.D.: ø3.5 to ø7

(Reference) 0.5 mm², 2-core or 3-core, equivalent to JIS C 3306

DIN Connector Part No.

Fitting and Silencer Part No. for P, R Ports When Using Valve as an Individual Unit

Part no. for one-touch fitting for 1(P) port and silencer/one-touch fitting for 3(R) port

<u> </u>				
Series	(1) One-touch	(2) For 3(R) port		
	fitting for 1(P) port	Silencer	One-touch fitting	
VQZ100	KQ2H06-M5	AN120-M5	KJS04-M5	
VQZ200	KQ2S06-01S	INA-25-46	IN-457-32 (for ø6)	
VQZ300	KQ2H08-02S	AN101-01	KQ2H06-01S	

The diameter of the above fitting and silencer is the maximum diameter to in the EXH port.

Be sure to read this before handling.

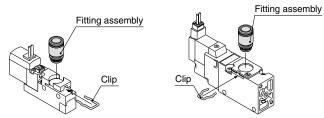

For Safety Instructions and 3 Port Solenoid Valve Precautions, refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A).

One-touch Fittings Replacement

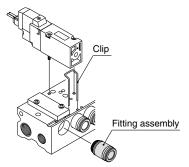

ACaution

The built-in fittings on the manifold can be changed easily. Simply remove the corresponding valve and take out the fitting clip underneath.

Take out the clip with a screwdriver, etc., then replace the fittings. About mounting the fittings, after inserting the fitting until it stops, then put the clip into the prescribed position.

VQZ200: Horizontally clipped to the valve body VQZ100/300: Vertically clipped to the valve body

Precautions

When pulling the fitting assembly away from the valve base, remove the clip, then connect a tube or plug (KQ2P- $\Box\Box$) with the one-touch fitting and pull it out holding the tube or plug. Do not hold the release bushing to avoid damage.

DIN Rail Removal/Mounting

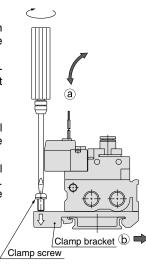

ACaution

1. Removing

- Loosen the clamp screw on the (a) side of both ends of the manifold.
- Lift the ⓐ side ➡ of the manifold off the DIN rail and slide it in the direction of the ⓑ side.

2. Mounting

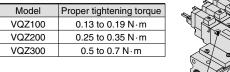

- 1) Catch the hook of the DIN rail bracket on the ⓑ side on the DIN rail.
- Push side (a) onto the DIN rail and tighten the clamp screw. The proper tightening torque for screws is 0.3 to 0.4 N•m.

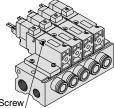

Valve Mounting

ACaution

1. After confirming the gasket is correctly placed under the valve, securely tighten the bolts with the proper torque shown in the table below.

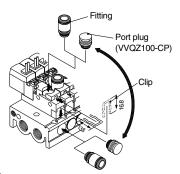

VQZ100 Piping Direction Replacement

▲ Caution

1. How to replace the port direction

Fitting and port plug are modules. After removing the clip with a flat head screwdriver, take out the fitting and port plug. The piping direction (side or top) can be altered by exchanging the fitting and port plug. During exchange, insert the fitting and the port plug until they contact the wall, then, insert the clip to specified position.

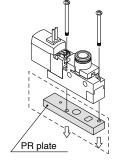

Precautions

The clip length for the valve and the base are different. Fitting may detach if the incorrect clip is used.

2.Valve piped on top can be operated independently by using PR plate.

(Refer to the below part numbers when placing an order.)

VQZ100-12A (Standard) VQZ100-12B (External pilot type) * 2 set screws are included.
