

# 3 Port Direct Operated Poppet Solenoid Valve **Rubber Seal**

# Series VT307

## Compact yet provides a large flow capacity

Dimensions (W x H x D)...30 x 54.5 x 33 (Grommet)

C: 0.71 dm<sup>3</sup>/(s·bar) {Rc 1/4 (Passage  $2 \rightarrow 3$ )}

## Low power consumption

VT/VO307······4.8 W DC/Standard type VT/VO307Y VT/VO307W).....2 W DC/Energy-saving type

## Suitable for use in vacuum applications

-101.2 kPa (For vacuum specifications type: VT/VO307V, VT/VO307W)

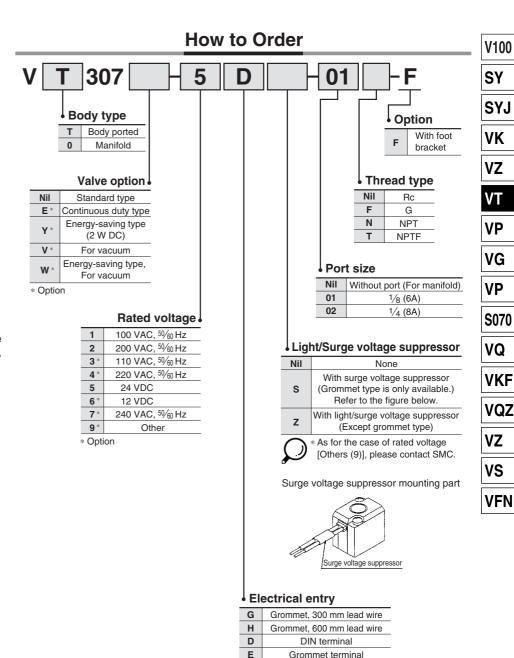

## A single valve with 6 valve **functions**

(Universal porting type) Selective porting can provide 6 valve functions, such as N.C. valve, N.O. valve, Divider valve, Selector valve, etc.

#### JIS Symbol

#### Manifold

## **⚠ Precautions**

I Be sure to read before handling. I For Safety Instructions and Solenoid Valve Precautions, refer to page 4-18-2.

## 

1. Make sure that dust and/or other foreign materials do not enter the valve from the unused port (e.g. exhaust port). Also, since there is a breathing port for the armature in the manual override part, do not allow accumulation of dust and/or other foreign materials to block bleed

#### How to Calculate the Flow Rate

For obtaining the flow rate, refer to page 4-1-6.

#### Standard Specifications

Type of actuation		С	Direct operated type 2 position single solenoid		
Fluid			Air		
Operating pressure range			0 to 0.9 MPa		
Ambient and fluid temperature		-10 to 50°C (No freezing. Refer to page 4-18-4.)			
Response time (1)			20 ms or less (at the pressure of 0.5 MPa)		
Max. operating frequency			10 Hz		
Lubrication		Not requ	ired (Use turbine oil Class 1 ISO VG32, if lubricated.)		
Manual override		Non-locking push type			
Mounting orientation		Unrestricted			
Shock/Vibration resistance (2)			150/50 m/s <sup>2</sup>		
Enclosure		Dustproof			
Electrical entry			Grommet, Grommet terminal, Conduit terminal, DIN terminal		
Coil rated voltage (V)	AC (50		100, 200, 24*, 48*, 110*, 220*, 240*		
Coil rated voltage (V)		C	24, 6*, 12*, 48*, 100*		
Allowable voltage fluctuation			-15 to +10% of rated voltage		

Inrush

Holding

DC

AC

DC

AC

(Not applicable for grommet type)

\* Option

Apparent power (3) (4)

Power consumption (3) (4)

Light/Surge voltage suppressor

Note 1) Based on dynamic performance test, JIS B 8374-1981. (Coil temperature: 20°C, at rated voltage, without surge suppressor)

Note 2) Impact resistance: No malfunction occurred when it is tested with a drop tester in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states every once for each condition. (Values at the initial period)

Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 1000 Hz. Test was performed at both energized and de-energized states in the axial direction and at the right angles to the main valve and armature. (Values at the initial period)

Note 3) At rated voltage

Note 4) The value is different for continuous duty type (VT307E), and energy-saving type (VT307Y/W). Refer to "Option" shown below.

## Flow Characteristics/Weight

	Port	Flow characteristics							Weight												
Valve model	size	1 → 2	(P →	A)	2 → 3	(A →	R)	3 → 2	: (R →	- A)	2 → 1	(A → I	P)	vveigni							
	3120	C [dm3/(sbar)]	b	Cv	C [dm³/(sbar)]	b	Cv	C [dm³/(sbar)]	b	Cv	C [dm3/(sbar)]	b	Cv	Grommet

VT307E (Continuous duty type)	1/4																				
VT307Y (Energy-saving type)		0.49	0.20	0.12	0.44	0.34	0.11	0.48	0.17	0.12	0.46	0.28	0.11								
VT307W (Energy-saving, Vacuum spec. type)																					

Note) Values for a single valve unit. It differs in the manifold case. Refer to manifold specifications on page 4-7-5.

#### Option

## Continuous duty type: VT307E

Exclusive use of VT317E recommended for continuous duty with long time loading.

#### 

- 1. This model is for continuous duty, not for high cycle rates. But even in low cycle rates, if energizing the valve more than once a day, please consult with
- 2. Energizing solenoid should be done at least once in 30 days.

#### Specifications different from standard are as follows.

Apparent power/AC	Inrush 7.9VA (50 Hz) , 6.2VA (60 Hz)
	Holding 5.8VA (50 Hz) , 3.5VA (60 Hz)
Power consumption/DC	2 W, 2.2 W (With indicator light)
Response time (1)	30 ms or less (at the pressure of 0.5 MPa)

Note1) Refer to "Response time" of standard specifications Note 2) For the flow characteristics, refer

to "Flow Characteristics".

### Energy-saving type: VT307Y (VT307W)

If low power consumption is required for electronic control, "VY307Y(W)" (2 W DC) is recommended.

Specifications different from standard are as follows.

Power consumption/DC |2 W, 2.2 W (With indicator light) \* Response time (1) 25 ms or less (at 0.5 MPa)

\* 100 VDC: 2.4 W

Note 1) Refer to "Response time" of standard specifications.

Note 2) For the flow characteristics, refer to "Flow Characteristics".

## Vacuum spec. type: VT307V (VT307W)

12.7 VA (50 Hz) 10.7 VA (60 Hz)

7.6 VA (50 Hz) 5.4 VA (60 Hz)

Without indicator light: 4.8 W, With indicator light: 5 W

ZNR (Varistor), Neon bulb

Diode, LED (Neon bulb for 100 V or more)

This vacuum model has less air leakage than the standard model under low pressure. It is recommended for vacuum application.

## △ Caution

1. Since this valve has slight air leakage, it can not be used for vacuum holding (including positive pressure holding) in the pressure container.

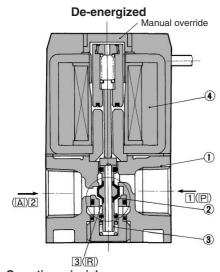

Specifications different from standard are as follows.

Operating pressure range | -101.2 kPa to 0.1 MPa

## 3 Port Direct Operated Poppet Solenoid Valve Rubber Seal Series VT307

#### Construction

# Operation principle <De-energized>

Spool valve ② is pushed upward by the return spring ③, port  ${\Bbb P}$  is closed, and then port  ${\Bbb A}$  and port  ${\Bbb R}$  are opened.

Air flow direction:

Port  $P \longleftrightarrow Block, A \longleftrightarrow R$ 

## **Component Parts**

(A)2 (T)(P) 3 (R)

When an electric current is applied to the molded coil 4, the armature 5 is attracted to the core 6, and through the push rod 7, it pushes down the spool valve 2. Then, port P and port A are connected. At this time, there will be gaps between the armature 5 and the core 6, but the armature will be magnetically attracted to the core 6.

Air flow direction:

<Energized>

 $\mathsf{Port}\: \overline{\mathbb{P}} \longleftrightarrow \mathsf{Port}\: \overline{\mathbb{A}}\:,\: \mathsf{Port}\: \overline{\mathbb{R}} \longleftrightarrow \mathsf{Block}$ 

No.	Description	Material	Note
1	Body	Aluminum die-casted	Color: Platinum silver
2	Spool valve	Aluminum, NBR	
3	Return spring	Stainless steel	
(4)	Molded coil	Resin	

## **How to Use DIN Terminal**

#### 1. Disassembly

- After loosening the thread (1), then if the housing (2) is pulled in the direction of the thread, the connector will be removed from the body of equipment (solenoid, etc.).
- 2) Pull the screw (1) out of the housing (2).
- 3) On the bottom part of the terminal block (3), there's a cut-off part (9). If a small flat head screwdriver is inserted between the opening in the bottom, terminal block (3) will be removed from the housing (2). (Refer to "Figure 1".)
- 4) Remove the cable gland (4) and plain washer (5) and rubber seal (6).

#### 3. Wiring

- Passing through the cable (7), cable gland (4), plain washer (5), rubber seal
   (6) in this order, and then insert into the housing (2).
- From the terminal block (3), loosen the screw (11), then pass the lead wire (10) through, then again tighten the screw (11).
  - Note 1) Tighten within the tightening torque of 0.5 N·m ±15%.
  - Note 2) Cable (7) external: ø6 to ø8 mm Note 3) Crimped terminal like roundshape or Y shape cannot be used.

#### **Connector for DIN Terminal**

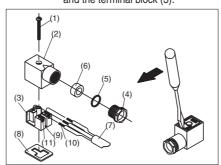

Description	Part no.
DIN connector	B1B09-2A

#### 3. Assembly

1) Passing cable gland (4), washer (5), rubber seal (6), housing (2) in this order through cable (7) and connect to terminal block (3) and then set the terminal block (3) to the housing (2).

(Push it down until you hear the click sound.)

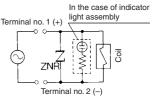

- Putting rubber seal (6), plain washer (5), in this order into the cable introducing slit on the housing (2), then further tighten the cable gland (4) securely.
- 3) Insert the gasket (8) between the bottom part of terminal block (3) and a plug attached to equipment, and then screw (1) in from the top of the housing (2) to tighten it
  - Note 1) Tighten within the tightening torque of 0.5 N·m  $\pm 15\%$ .
- Note 2) Connector orientation can be changed by 180 degrees depending on how to assemble the housing (2) and the terminal block (3).

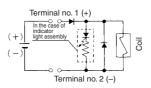

## **⚠** Caution

## **Light/Surge Voltage Suppressor**

AC, 100 VDC or more

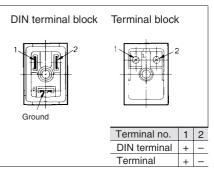

48 VDC

## **Electrical Connection**

DIN terminal and terminal (with light/surge voltage suppressor) are connected inside as in the figure below. Connect to the corresponding power supply.

- Applicable cable O.D. Type T: Ø4.5 to Ø7 mm Type E: Ø2.3 to Ø2.8 mm Type D: Ø6 to Ø8 mm
- Applicable crimp terminal
   Type E/T: 1.25-3, 1.25-3S
   1.25Y-3N, 1.25Y-3S

(Round or "Y" shaped crimped terminals ) can be not used for type "D".

## Dimensions (Interchangeable with "VT301" for mounting)

# **Manifold Specifications**

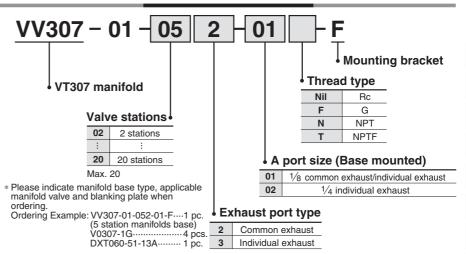

VT307 manifold is B mount style and available both as a common exhaust and individual exhaust model.

Manifold valve can be easily converted from N.C. (Normally Closed) to N.O. (Normally Open) merely by turning over the switch cover.

VV307-01-063-□-F

### **How to Order Manifold**

**Manifold Specifications** 

Mani	fold type		В	mount		
Max. number of stations			20 stations Note)			
Applicable solenoid valve			VO307□-□□□			
Exha	aust port	Port	ocation (Direc	ction)/Por	size	
Symbol	Type	Р		А		R
2	Common	Base (Side)		Base (S	ide)	Base (Side)
3	Individual	Base (		Base (S		Base (Top)

Note) For more than 6 stations, supply air both sides of P port. The common exhaust type should exhaust from both of the R port.

#### **Option**

Description	Part no.
Blanking plate (With gasket, screw) Note)	DXT060-51-13 A

#### **Accessory for Applicable Solenoid**

Description	Part no.	Qty.				
Function plate (With gasket) Note)	DXT152-14-1 A	1 pc.				
Mounting screw	NXT013-3	2 pcs.				

Note) DXT060-51-13B, DXT152-14-1B are for energizing continuously.

## **⚠** Precautions

Be sure to read before handling. For Safety Instructions and Solenoid Valve Precautions, refer to page 4-18-2.

#### Mounting

# **<b>⚠** Warning

When mounting a valve on the manifold base, N.C. and N.O. can be reversed by a function plate orientation. Also, since cylinder also acts reversely, confirm if the function plate is correctly mounted or not.

## Changing from N.C. to N.O.

# **⚠** Caution

This product is delivered as N.C. valve. If N.O. valve is needed, remove mounting screws of the required valve and turn over the function plate. (Make sure that there are gaskets on both sides of the plate.) Then, tighten the mounting screws to fix the valve to the manifold base.

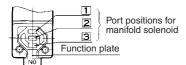

Figure: For N.C.

Specifications	Function plate	
N. C.	No mark	
N. O.	NO	

## **△** Caution

- Each valve is fixed to the manifold base with two M4 mounting screws. Tighten the screws evenly when re-mounting.
- For mounting, tighten M4 or equivalent screws evenly into the mounting holes of the manifold base.

Tightening torque of the mounting screw (M4): 1.4 N·m

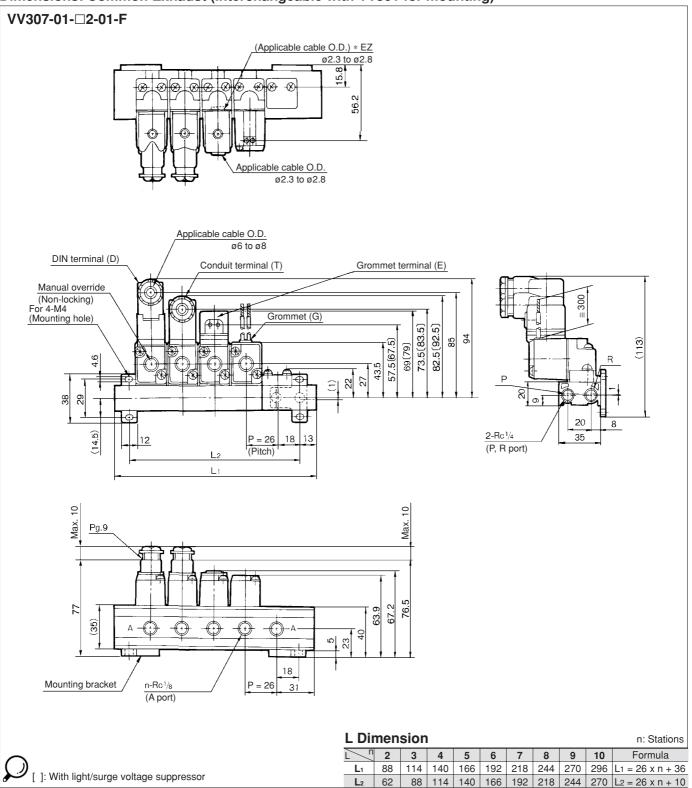

### **Port Direction**

## **⚠** Caution

**1.** For the common exhaust type, pressurization or evacuation of the R port can cause a malfunction.

VT317E (Continuous duty type)													

Note) Values for a single valve unit. It differs in the manifold case. Refer to manifold specifications on page 4-7-14.

#### Option

### Continuous duty type: VT317E

Exclusive use of VT317E is recommended for continuous duty with long time loading.

## **△**Caution

- This model is for continuous duty, not for high cycle rates. But even in low cycle rates, if energizing the valve more than once a day, please consult with SMC.
- **2.** Energizing solenoid should be done at least once in 30 days.

#### Vacuum spec. type: VT317V

This vacuum model has less air leakage than the standard model under low pressure. It is recommended for vacuum application.

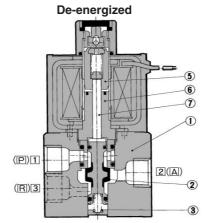

### **⚠** Caution

 Since this valve has slight air leakage, it can not be used for vacuum holding (including positive pressure holding) in the pressure container.

# Specifications different from standard are as follows.

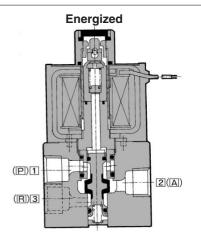

Operating pressure range | -101.2 kPa to 0.1 MPa

#### Construction

# Operation principles <De-energized>

Spool valve ② is pushed upward by the return spring ③, port P is closed, and port A and port R are opened.

#### <Energized>

When an electric current is applied to the molded coil  $\hat{\mathbf{q}}$ , the armature  $\hat{\mathbf{s}}$  is attracted to the core  $\hat{\mathbf{s}}$ , and through the push rod  $\hat{\mathbf{q}}$ , it pushes down the spool valve  $\hat{\mathbf{q}}$ . Then, port  $\hat{\mathbf{p}}$  and port  $\hat{\mathbf{q}}$  are connected. At this time, there will be gaps between the armature  $\hat{\mathbf{s}}$  and the core  $\hat{\mathbf{s}}$ , but the armature will be magnetically attracted to the core  $\hat{\mathbf{s}}$ .

#### **Component Parts**

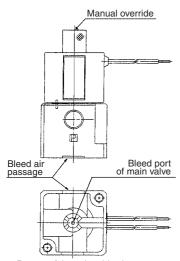

No.	Description	Material	Note
1	Body	Aluminum die-casted	Color: Platinum silver
2	Spool valve	Aluminum, NBR	

# **<b>⚠** Precautions

Be sure to read before handling. For Safety Instructions and Solenoid Valve Precautions, refer to page 4-18-2.

## Caution

- 1. A bleed port for the main valve is located at the bottom of the solenoid valve. Since blocking it causes malfunction, do not block it.
- \* Ordinarily, when the solenoid valve is mounted on a metal surface, it can breathe through the breather hole, via the breather groove. However, in particular, if the surface to be mounted is made of the rubber, the rubber could deform and block the hole.
- 2. Make sure that dust and/or other foreign materials should not enter the valve from the unused port (e.g. exhaust port). Also, since there is a bleed port for the armature in the manual override, do not allow accumulation of dust and/or other foreign materials to block bleed port.

Bottom of the solenoid valve

#### How to Calculate the Flow Rate

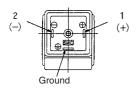

For obtaining the flow rate, refer to page

#### **How to Use DIN Terminal**

#### 1. Disassembly

- After loosening the thread (1), then if the cover (4) is pulled in the direction of the thread, the connector will be removed from the body of equipment (solenoid, etc.).
- 2) Pull out the screw (1), then remove the gasket (2a) or (2b).
- 3) On the bottom part of the terminal block (3), there's a cut-off part (indication of an arrow) (3a). If a small flat head screwdriver is inserted between the opening in the bottom, terminal block (3) will be removed from the cover (4). (Refer to graph at right.)
- 4) Remove the cable gland (5) and plain washer (6) and rubber seal (7).

#### 2. Wiring

- 1) Pass them through the cable (8) in the order of cable ground (5), washer (6), rubber seal (7), and then insert into the housing (4).
- Dimensions of the cable (8) are the figure as below. Skin the cable and crimp the crimped terminal (9) to the edges.
- 3) Remove the screw with washer (3e) from the bracket (3e). (Loosen in the case of Y shape type terminal.) As shown in the below figure, mount a crimped terminal (9), and then again tighten the screw (3e).
  - Note) Tighten within the tightening torque of 0.5 N·m  $\pm 15\%$ .

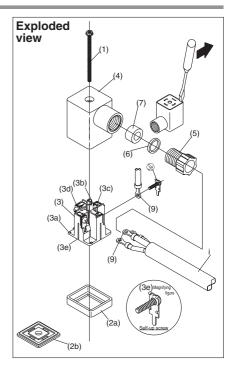

Note: a It is possible to wire even in the state of bare wire. In that

- case, loosen the screw with washer (3e) and place a lead wire into the bracket (3d), and then tighten it once again.
- b The maximum size for the round terminal (9) is 1.25 mm<sup>2</sup>—3.5 and for the Y terminal is 1.25 mm<sup>2</sup>—4.
- c Cable (8) external: ø6 to ø12 mm
- Note) For the one with the external dimension ranged between 9 to 12 mmø, remove the inside parts of the rubber seal (7) before using.

#### 3. Assembly

- Terminal box (3) connected with housing (4) should be reinstated.
   (Push it down until you hear the click sound.)
- Putting rubber seal (7), plain washer (6), in this order into the cable introducing slit on the housing (4), then further tighten the cable gland (5) securely.
- 3) By inserting gasket (2a) or (2b) between the bottom part of the terminal box (3) and a plug on an equipment, screw in (1) on top of the housing (4) and tighten it.
- Note) Tighten within the tightening torque of 0.5 N·m ±20%.

Note: The orientation of a connector can be changed arbitrarily, depending on the combination of a housing (4) and a terminal box (3).

Note 1)  $\ast$  mark in the product model numbers denotes the rated voltage.

Note 2)  $\square$  mark denotes the valve option.

Note 3)  $\ast$  mark and  $\ast\ast$  mark are for coil part number and coil assembly with terminal the rated voltage.

Example 1) In the case of \*\* VT317-001GB-05

Example 2) In the case of \* PVT317-5G

# **⚠** Caution

When the rated voltage is AC and if it is assembled with the coil for DC, response may be delayed and occur malfunction. Also, for DC valves, when the coil for AC is assembled, it occurs malfunction. For AC valves, assemble the coil for AC, and for DC valves, assemble the coil for DC.

#### **Connector for DIN Terminal**

### **Dimensions: Individual Exhaust**

## 

Be sure to read before handling. For Safety Instructions and Solenoid Valve Precautions, refer to page 4-18-2.

## Mounting

# **⚠** Warning

 When mounting valves on the manifold base, the mounting orientation is decided. If it is mounted in the wrong direction, connected equipment may malfunction. Mount it by referring to how to switch over from N.C. to N.O. specifications.

## **⚠** Caution

- Each valve is fixed to the manifold base with two M4 mounting screws. Tighten the screws evenly when re-mounting. Tightening torque of the mounting screw (M4): 1.4 N·m
- For mounting, tighten M4 or equivalent screws evenly into the mounting holes of the manifold base.

### Changing from N.C. to N.O.

## **⚠** Caution

Universal porting permits convertibility N.C./N.O. by a simple 180 degree rotation. Mounting conditions for N.C. and N.O. is indicated as below figure.

Exhaust port type Valve	N.C.	N.O.
Common exhaust	A A	
Individual exhaust	RO O	RO

This product is delivered as N.C. valve. If N.O. valve is needed, remove mounting screws of the required valve and turn the valve at 180° degrees. (Make sure that there are O-rings fixed on 4 positions of the valve surface.) Then, tighten the mounting screws to fix the valve to the manifold base.

For details about certified products For details about certified products conforming to international standards, visit us at www.smcworld.com. visit us at www.smcworld.com.

# 3 Port Direct Operated Poppet Solenoid Valve **Rubber Seal**

# Series VT325

## Compact yet provides a large flow capacity

Dimensions (W x H x D)....55 x 118 x 53 (Grommet)

C: 0.61 dm3/(s.bar) {Rc 3/8 (Passage  $2 \rightarrow 3$ )}

## A single valve with 6 valve **functions**

(Universal porting type)

Six valve functions can be attained by selecting the piping ports. (Enabling the N.C. valve, N.O. valve, divider valve, selector valve, etc. to be used as desired.)

## Suitable for use in vacuum applications

–101.2 kPa

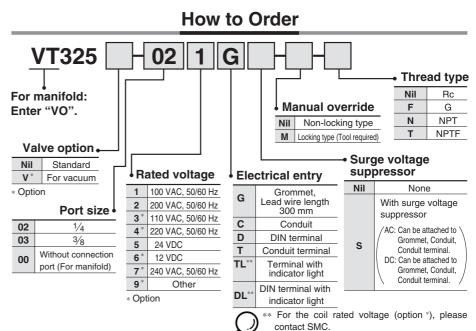

(For vacuum specifications type: VT/VO325V)

#### JIS Symbol

#### Manifold

Model	Applicable manifold	Accessory
VO325-00□□	B mount common exhaust type	Seal (DXT083-13-1) Bolts (DXT083-19-1, 2 pcs.)

#### **Specifications**

•				
Type of actuation	Direct operated type 2 position single solenoid			
Fluid	Air			
Operating pressure range	0 to 1.0 MPa			
Ambient and fluid temperature	-10 to 50°C (No freezing. Refer to page 4-18-4.)			
Max. operating frequency	5 Hz			
Response time (1)	30 ms or less (at the pressure of 0.5 MPa)			
Lubrication	Not required (Use turbine oil Class 1 ISO VG32, if lubricated.)			
Manual override	Non-locking push type			
Shock/Vibration resistance (2)	150/50 m/s <sup>2</sup>			
Enclosure	Dustproof			

Note 1) Based on dynamic performance test, JIS B 8374-1981. (Coil temperature: 20°C, at rated voltage, without surge suppressor)

Note 2) Impact resistance: No malfunction occurred when it is tested with a drop tester in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states every once for each condition. (Values at the initial period)

Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 1000 Hz. Test was performed at both energized and de-energized states in the axial direction and at the right angles to the main valve and armature. (Values

Conduit terminal (TS)	ZNRZ	Z							

#### Circuit for Indicator Light

	AC	DC				
DIN terminal with indicator light (DL)	Neon ( Solution )	ZNR Z S				
Conduit terminal with indicator light (TL)	Neon 6 bulb	₹ 5				

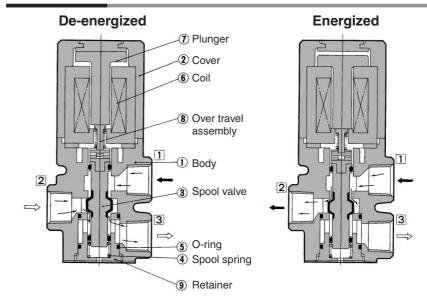

#### · Grommet type

#### 3. Manual override with lock

- Using a screwdriver, push the manual override button that is located in the head portion of the solenoid valve in order to directly push the spool valve downward, thus causing the valve to switch.
- 2) With the button remaining pushed down, turn it approximately 90° clockwise or counterclockwise to maintain the manual override locked state.
- To revert to the original state, keep the button pushed down and turn it approximately 90° clockwise.

#### Construction

# Operation principle <De-energized>

The spool ③ is pushed upward by the force of the spring ④ and the air passage between port ② and port ③ is opened and port ① is blocked.

Air flow direction:  $\boxed{1} \longleftrightarrow \mathsf{Block}, \boxed{2} \longleftrightarrow \boxed{3}$ 

#### <Energized>

When the coil (6) is energized the plunger (7) is pulled down depressing the spool (3) via the overtravel assembly (8) and the air passage between port (1) and port (2) is opened and port (3) is blocked.

Air flow direction:  $\boxed{1} \longleftrightarrow \boxed{2}$ ,  $\boxed{3} \longleftrightarrow \mathsf{Block}$ 

## **Component Parts**

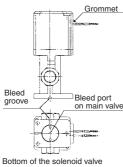

No.	Description	Material	Note
1	Body	Aluminum die-casted	Platinum silver
2	Cover	Aluminum die-casted	Platinum silver
3	Spool valve	Aluminum, NBR	

## **⚠** Precautions

Be sure to read before handling. For Safety Instructions and Solenoid Valve Precautions, refer to page 4-18-2.

# **⚠** Caution

- The bottom of the solenoid valve has a breather hole for the main valve. Take proper measures to prevent this hole from being blocked as this will lead to a malfunction.
- \* Ordinarily, when the solenoid valve is mounted on a metal surface, it can breathe through the breather hole, via the breather groove. However, in particular, if the surface to be mounted is made of the rubber, the rubber could deform and block the hole.

Make sure that dust and/or other foreign materials do not enter the valve from the unused port (e.g. exhaust port).

The grommet portion contains a breather hole for the core. Take proper measures to prevent dust or foreign matter from accumulating in this area.

#### **Electrical Connection**

For wiring to DIN terminal, connect the positive (+) polar side with connector terminal no. 1 and the negative (-) side with connector terminal no. 2 when the rated voltage is DC type.

#### How to Calculate the Flow Rate

For obtaining the flow rate, refer to page 4-1-6.

#### **How to Wire DIN Terminal**

#### 1. Disassembly

- 1) After loosening the thread (1), then if the cover (4) is pulled in the direction of the thread, the connector will be removed from the body of equipment (solenoid, etc.).
- 2) Pull the screw (1), and then remove gasket (2a) or (2b).
- 3) On the bottom part of the terminal block (3), there's a cut-off part (indication of an arrow) (3a). If a small flat head screwdriver is inserted between the opening in the bottom, terminal block (3) will be removed from the cover (4). (Refer to the figure below.)
- 4) Remove the cable gland (5) and plain washer (6) and rubber seal (7).

#### 2. Wiring

- 1) Pass them through the cable (8) in the order of cable ground (5), washer (6), rubber seal (7), and then insert into the housing (4).
- Dimensions of the cable (8) are the figure as below. Skin the cable and crimp the crimped terminal (9) to the edges.
- 3) Remove the screw with washer (3e) from the bracket (3e). (Loosen in the case of Y shape type terminal.) As shown in the below figure, mount a crimped terminal (9), and then again tighten the screw (3e).

Note) Tighten within the tightening torque of 0.5 N·m  $\pm 15\%$ .

- Note: a It is possible to wire even in the state of bare wire. In that case, loosen the screw with washer (3e) and place a lead wire into the bracket (3d), and then tighten it once again.
  - b The maximum size for the round terminal (9) is 1.25 mm2—3.5 and for the Y terminal is 1.25 mm2—4.

c Cable (8) external: ø6 to ø12 Note) For the one with the external dimension ranged between 9 to 12 mmø, remove the inside parts of the rubber seal (7) before using.

### **Connector for DIN Terminal**

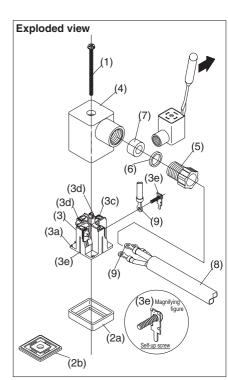

Description	Part no.
DIN connector	GDM2C

#### 3. Assembly

- Terminal box (3) connected with housing (4) should be reinstated. (Push it down until you hear the click sound.)
- 2) Putting rubber seal (7), plain washer (6), in this order into the cable introducing slit on the housing (4), then further tighten the cable gland (5) securely.
- 3) By inserting gasket (2a) or (2b) between the bottom part of the terminal box (3) and a plug on an equipment, screw in (1) on top of the housing (4) and tighten it.

Note) Tighten within the tightening torque of 0.5 N·m ±15%.

Note: The orientation of a connector can be changed arbitrarily, depending on the combination of a housing (4) and a terminal box (3).

## **A**Precautions

## \land Warning

When mounting valves on the manifold base, the mounting orientation is decided. If it is mounted in the wrong direction, connected equipment may malfunction. Mount it by referring to external dimensions on page 4-7-38. Besides, the external dimensions are showing the case of N.C. specifications.

## Changing from N.C. to N.O.

# **⚠** Caution

The valves are assembled as N.C. valves at the time of shipment.

By removing the two retaining screws from the desired valves, and rotating each valve body 180° and reassembling it on the manifold base, it is possible to reassemble an N.C. valve as an N.O. valve. (When doing so, make sure that a gasket is attached to the mounting surface of the valve.) Properly tighten the screws.

The tightening torque of the retaining screws is  $3 \text{ N} \cdot \text{m}$ .
