# Plug Lead Unit: Flip Type

## How to Order Manifold

**VV5Q 0 4 -08 F S1 -D**

**Series**  
0 VQ0000

**Manifold**  
4 Plug lead unit/Flip

**Stations**  
01 1 station  
⋮ ⋮  
The number of max. stations differs from kit to kit. (Refer to the table below.)

**Option**

Nil	None (C kit only)
D <sup>(2)</sup>	DIN rail mounting style
K <sup>(3)</sup>	Special wiring specifications (Except double wiring)
N	With name plate
S <sup>(4)</sup>	Built-in silencer, direct exhaust

Note 1) When two or more symbols are specified, indicate them alphabetically. Example) -DNS  
Note 2) F, P, T, and S kits are DIN rail in mounting styles, so include suffix -D.  
Note 3) Specify the wiring specifications on the manifold specification sheet. (Except C kit)  
Note 4) F, P, T and S kits are provided with an exhaust on one side, while C kits are with an exhaust on both sides.

Simple specials are available with SMC Simple Specials System. For details about applicable models, please contact SMC.

**Kit/Electrical entry/Cable length**

**F** kit  
(D-sub connector)

Side entry  
25P Note)

U1	S1	With cable (1.5 m)	
U2	S2	With cable (3 m)	
U3	S3	With cable (5 m)	

P. 2-4-50

**S** kit  
(Serial transmission unit)

The valve is equipped with an indicator light and surge voltage suppressor.

The dust-protected type SI unit is applicable, too. For details, please contact SMC.

P. 2-4-54

Kit S<sup>(3)</sup>

Kit S <sup>(3)</sup>		
0	Without SI unit	Max. 16 <sup>(2)</sup> stations
A	With general type SI unit (Series EX300)	
B	Mitsubishi Electric Corp.: MELSECNET/MINI-S3 Data Link System	
C	OMRON Corp.: SYSBUS Wire System	
D	SHARP Corp.: Satellite I/O Link System	
F1	NKE Corp.: Uni-wire System (16 output points)	
H	NKE Corp.: Uni-wire H System	

Note 1) Besides the above, F and P kits with different number of pins are available. For details, refer to page 2-4-68.  
Note 2) See page 2-4-69 for details.  
Note 3) Please consult with SMC for the following serial transmission kits: Matsushita Electric Works, Ltd.; Rockwell Automation, Inc.; SUNX Corporation; Fuji Electric Co., Ltd.; OMRON Corporation.

## How to Order Valves

**VQ 0 1 4 0 Y 5 L C4**

**Series**  
0 VQ0000

**Type of actuation**

1 2 position single  
(A)(B)  
(R1)(P)(R2)

2 2 position double (Latching)  
(A)(B)  
(R1)(P)(R2)  
Metal seal  
Rubber seal

3 Note) 3 position closed center (A)(B)  
(R1)(P)(R2)

4 Note) 3 position exhaust center (A)(B)  
(R1)(P)(R2)  
Note) 3 position occupies two stations.

**Coil voltage**

1	100 VAC (50/60 Hz)
2 Note)	200 VAC (50/60 Hz)
3	110 VAC (50/60 Hz)
4 Note)	220 VAC (50/60 Hz)
5	24 VDC
6	12 VDC

Note) The C kit is applicable to 200/220 VAC.

**Function**

Symbol	Specifications	DC	AC
Nil	Standard type	(1.0 W)	○ (1)
H (2)	High pressure type	(1.5 W)	—
Y (2)	Low wattage type	(0.5 W)	—

Note 1) For power consumption of AC type, refer to page 2-4-36.  
Note 2) Except double (latching).

**Seal**

0	Metal seal
1	Rubber seal

Note 1) For negative common specifications, refer to "Option" on page 2-4-69.  
Note 2) Connector assembly will be required when the F, P, T, S kits add a valve. For model no., refer to "Option" on page 2-4-69.

**Electrical entry**

	VQ0000
G: Grommet C kit single only. Single only (Except AC.)	
L: L plug connector With lead wire	
LO: L plug connector Without connector	
M: M plug connector With lead wire	
MO: M plug connector Without connector	

Note) LO and MO valves are used for F, P, T kits. The plug connector and lead wire are attached to the manifold.

**Cylinder port**

Symbol	Port size
C3	With One-touch fitting for ø3.2
C4	With One-touch fitting for ø4
M5	M5 thread

Note) For inch-size One-touch fittings, refer to "Option" on page 2-4-69.

**Manual override**

Nil: Non-locking push type (Tool required)  
B: Locking type (Tool required) Available to single/3 position

Note) Except double (latching) type is push type only though, it can keep the switching position. (Refer to page 2-4-66.)

**Legend:** VQC, SQ, VQ0, VQ4, VQ5, VQZ, VQD

## VQ0000/1000/2000 Kit (Serial transmission unit)

- The serial transmission system reduces wiring work, while minimizing wiring and saving space.
- The system comes in an type SA (generic for small scale systems) for equipment with a small number of I/O points, or 32 points max., type SB (applicable to Mitsubishi Electric models) for controlling 512 I/O points max., type SC (applicable to OMRON models), and type SD (applicable to SHARP models; 504 points max.).
- Maximum 8 stations, optional 16 stations possible. (16 stations available as an option. Indicate 9 to 16 stations on the manifold specification sheet.)

### Manifold Specifications

Series	Porting specifications			Applicable stations
	Port location	Port size		
		P, R	A, B	
VQ0000	Side	C6	C3, C4, M5	Max. 16 stations
VQ1000	Side	C6	C3, C4, C6, M5	Max. 16 stations
VQ2000	Side	C10	C4, C6, C8	Max. 16 stations

- Stations are sequentially numbered from the D side.
- Double wiring (connected to SOL. A and SOL. B) is adopted for the internal wiring of each station, regardless of valve and option types. Mixed single and double wiring is available as an option. For details, refer to page 2-4-69.

## How to Order Valves

**VQ 1 1 4 0 Y - 5 LO C6**

**Series**

0	VQ0000
1	VQ1000
2	VQ2000

**Seal**

0	Metal seal
1	Rubber seal

**Function**

Symbol	Specifications	DC
Nil	Standard type	(1.0 W)
H <sup>Note</sup>	High pressure type	(1.5 W)
Y <sup>Note</sup>	Low wattage type	(0.5 W)

Note) Except double (latching).

**Coil voltage**

5	24 VDC/With light/surge voltage suppressor
---	--

Note 1) Connector assembly will be required when the S kits add a valve.  
For part nos., refer to "Option" on page 2-4-69.

**Type of actuation**

	VQ0000	VQ1000	VQ2000
1	2 position single	●	●
2	2 position double (Latching)	●	●
3	3 position closed center	● <sup>(1)</sup>	● <sup>(2)</sup>
4	3 position exhaust center	● <sup>(1)</sup>	● <sup>(2)</sup>
5	3 position pressure center	—	● <sup>(2)</sup>

Note 1) 2 stations space are occupied.  
Note 2) L plug connector is used for AC.

## How to Order Manifold Assembly

Specify the part numbers for valves and options together beneath the manifold base part number.

### Cylinder port

Symbol	Port size	VQ0000	VQ1000	VQ2000
C3	With One-touch fitting for ø3.2	●	●	—
C4	With One-touch fitting for ø4	●	●	●
C6	With One-touch fitting for ø6	—	●	●
C8	With One-touch fitting for ø8	—	—	●
M5	M5 thread	●	●	—

Note) For inch-size One-touch fittings, refer to "Option" on page 2-4-69.

### Manual override

Nil	Non-locking push type (Tool required)
B	Locking type (Tool required)
C	Locking type (Manual)

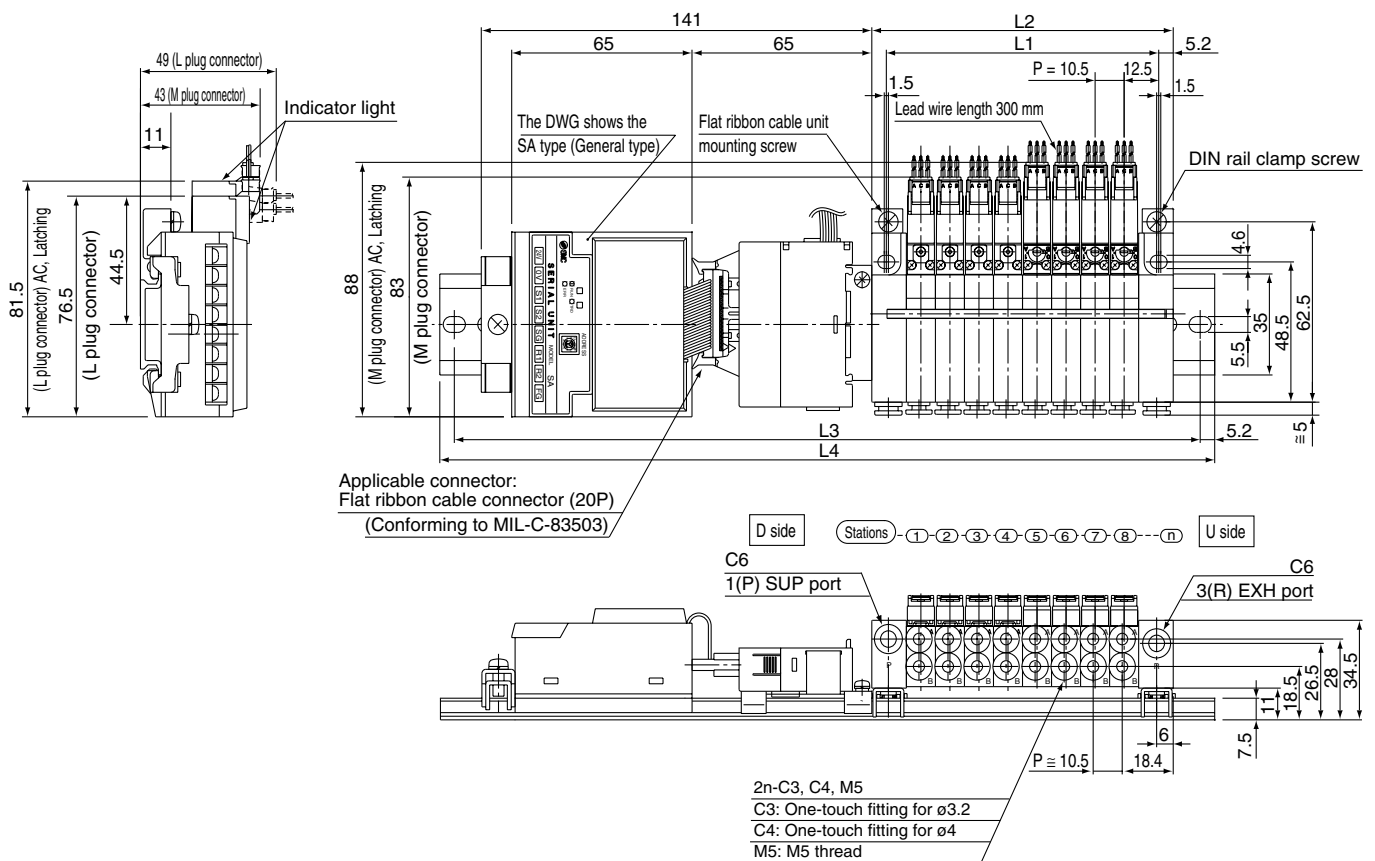

Note 1) All double latching valves of VQ0000 are non-locking push type. (Refer to page 2-4-66.)

Note 2) A manual override for pilot valve is provided to the standard model for double type.

### Electrical entry

LO	L plug connector without connector
MO	M plug connector without connector

Note 1) Plug connector and lead wire layers are attached to the manifold.

- Note 1) Built-in silencer styles are equipped with a 1(P) SUP port on the both D and U sides.
- Note 2) 3 position needs two stations.  
Cylinder port is located U side of body.

### Dimensions

Formula  $L1 = 10.5n + 14.5$ ,  $L2 = 10.5n + 25$  n: Station (Maximum 16 stations)

n	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
L1	25	35.5	46	56.5	67	77.5	88	98.5	109	119.5	130	140.5	151	161.5	172	182.5

## Manifold Option Parts for VQ0000

### Blanking plate assembly

#### VVQ0000-10A-4

It is used when a blanking plate is mounted to a manifold in advance for possible valve mounting, etc.

### Individual SUP spacer

#### VVQ0000-P-4-C4

When the same manifold is to be used for different pressures, individual SUP spacers are used as SUP ports for different pressures. (One station space is occupied.) Since the SUP passage on the spacer's D side is blocked in advance, it is mounted on the D side of the valve for individual supply while blocking the valve's U side. (See the application ex.)

\* Specify the spacer mounting position and SUP block plate mounting position on the manifold specification sheet.

### Individual EXH spacer

#### VVQ0000-R-4-C4

When valve exhaust affects other stations due to the circuit configuration, this spacer is used for individual valve exhaust. (One station space is occupied.) Since the EXH passage on the spacer's D side is blocked in advance, it is mounted on the D side of the valve for individual supply while blocking the valve's U side. (See the application ex.)

\* Specify the spacer mounting position and EXH block plate mounting position on the manifold specification sheet.

### P Block valve

#### VQ0<sup>1/4</sup> 4<sup>0</sup>-□-□□-P

Valve no.

For a flip plug-in unit, block plate is built in the valve for blocking SUP and EXH passages. Since the no. is classified by the passage to be blocked, specify it by attaching the option no. to the valve no. The block valve is constructed so that U sides of SUP and EXH passages are blocked.

\* Specify the number of stations on the manifold specification sheet.

#### <Shut off label>

When using block plates for SUP, EXH passage, indication label for confirmation of the blocking position from outside is attached. (One label for each)

\* When ordering a block plate incorporated with the manifold no., a block indication label is attached to the manifold.

\* Caution on handling P/RP block valve  
For manifold other than C kit which is silencer built-in, there's no exhaust port on the D side end plate. Install a spacer for individual EXH on the 1st station separately.

For SUP passage block	VQ0 <sup>1/4</sup> 4 <sup>0</sup> -□-□□-P
For EXH passage block	VQ0 <sup>1/4</sup> 4 <sup>0</sup> -□-□□-R
For SUP/EXH passage block	VQ0 <sup>1/4</sup> 4 <sup>0</sup> -□-□□-PR

### Name plate [-N4]

#### VVQ0000-N4-Station (1 to Max. stations)

It is a transparent resin plate for placing a label that indicates solenoid valve function, etc. Insert it into the groove on the side of the end plate and bend it as shown in the figure.

\* When ordering assemblies incorporated with a manifold, suffix -N to the manifold no.

### Blanking plug

#### KQ2P-<sup>23</sup>/<sub>06</sub>

It is inserted into an unused cylinder port and SUP/EXH ports.

Purchasing order is available in units of 10 pieces.

#### Dimensions

Applicable fittings size ød	Model	A	L	D
3.2	KQP-23	16	31.5	3.2
4	KQP-04	16	32	6
6	KQ2P-06	18	35	8

## Manifold Option Parts for VQ0000

**DIN rail mounting bracket  
VVQ0000-57A-4**

It is used for mounting a manifold on a DIN rail. The DIN rail mounted bracket is fixed to the manifold end plate.

(The specification is the same as that for the option -D.)

1 set of DIN rail mounting bracket is used for 1 manifold (2 DIN rail mounting brackets).

\* When ordering assemblies incorporated with a manifold, add suffix -D to the manifold no.

**Built-in silencer, Direct exhaust [-S]**

This is a type with an exhaust port atop the manifold end plate. The built-in silencer exhibits an excellent noise suppression effect.

F, P, T and S kits are provided with exhaust on one side.

Note) A large quantity of drainage generated in the air source results in exhaust of air together with drainage.

• For maintenance, refer to page 2-4-67.

\* When ordering assemblies incorporated with a manifold, add suffix -S to the manifold no.

## Manifold Option Parts for VQ1000

**Blanking plate assembly  
VVQ1000-10A-4**

It is used when a blanking plate is mounted to a manifold in advance for possible valve mounting, etc.

**Individual SUP spacer  
VVQ1000-P-4-C6**

When the same manifold is to be used for different pressures, individual SUP spacers are used as SUP ports for different pressures. (One station space is occupied.) Since the SUP passage on the spacer's D side is blocked in advance, it is mounted on the D side of the valve for individual supply while blocking the valve's U side. (See the application ex.)

\* Specify the spacer mounting position and SUP block plate mounting position on the manifold specification sheet.

Note) P block valve is mounted in the blocking position when ordering an individual SUP spacer incorporated with a manifold. When separately ordering an individual SUP spacer, separately order a P block valve.

**Individual EXH spacer  
VVQ1000-R-4-C6**

When valve exhaust affects other stations due to the circuit configuration, this spacer is used for individual valve exhaust. (One station space is occupied.)

Since the EXH passage on the spacer's D side is blocked in advance, it is mounted on the D side of the valve for individual supply while blocking the valve's U side. (Refer to the application example.)

\* Specify the spacer mounting position and EXH block plate mounting position on the manifold specification sheet.

\* When the electrical entry is F, P, T, S kit, and if you choose the option with built-in silencer, no exhaust port will be supplied on the D side end plate.

In this case, install a spacer for individual EXH on the 1st station.

Note) R block valve is mounted in the blocking position when ordering an individual EXH spacer incorporated with a manifold. When separately ordering an individual EXH spacer, separately order an R block valve.

## ⚠ Precautions

Be sure to read before handling. For Safety Instructions and Solenoid Valve Precautions, refer to page 2-9-2.

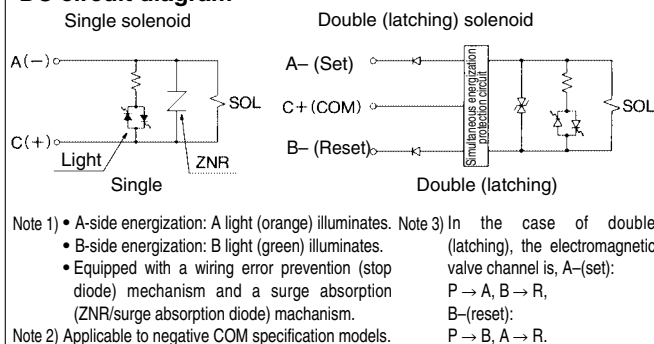

### Light/Surge Voltage Suppressor

#### ⚠ Caution

The lighting positions are concentrated on one side for both single solenoid and double (latching) type. In the double (latching) type, A side and B side energization are indicated by two colors which match the colors of the manual overrides.

#### DC circuit diagram

### Double (Latching solenoid) Type

#### ⚠ Caution

Different from the conventional double solenoid, the double type uses a latching (self-holding system) solenoid. Although the appearance is the same as the single solenoid, it is constructed so that the movable iron core in the solenoid is held in the ON position on A and B sides by instantaneous energization (20 ms or more).

The usage and function is the same as the double solenoid.

#### <Special Cautions for Latching Solenoid>

1. Select the circuit in which ON and OFF signals are not energized simultaneously.
2. 20 ms energization time is necessary for self-holding.
3. Avoid using the latching solenoid valves in environments where impact or collisions with the valve might occur. Also, do not use in places where strong magnetic fields are present.
4. Even though the armature in the solenoid of this valve is held on to B side, ON position (Reset), verify either A side, ON position or B side, ON position by energizing prior to use.
5. After manual operation, the main valve will return to its original position. Manual override on the pilot valve side can retain its switching position after manipulation.
6. Please contact SMC for long-term energization applications.
7. If the metal seal type goes down below the minimum operating pressure of supply air (0.1 MPa or less), the main valve will get back the home position. (B side ON position) Therefore, in the event of shutting the supply air or applying the air with being A side ON position remained, cylinder may be pulsated. In the event of manipulating the supply air, the valve's switching position has to be set in the home position side (B side ON position side).

### How to Mount/Remove Solenoid Valve

#### ⚠ Caution

##### <Procedure>

##### How to Remove

1. Loosen tie-rod bolt B. (Two to four turns)
2. After fully loosening the tie-rod bolt, take off bolt A upward as shown above.
3. Slide the valves aside to make a 1 mm clearance between the valve to be taken off and the others. As shown above, remove the whole valve while holding up the (a) side. (Avoid rough handling of the connector.)

##### Mounting

Reverse the sequence of steps above to remount.

Tighten the tie-rod bolts with the tightening torque at the right table while using caution not to tighten the only one side unevenly.

Note) Be careful not to push on the light cover while mounting/removing the valve.

#### Torque Applied to Tie-rod Bolt

VQ0000	0.5 to 0.7 N·m
VQ1000	1.0 to 1.4 N·m
VQ2000	1.0 to 1.4 N·m

### Double (Latching solenoid) Type

#### ⚠ Warning

Without an electric signal for the solenoid valve the manual override is used for switching the main valve.

#### ■ Push type (Tool required)

Push down on the manual override button with a small screwdriver until it stops. Release the screwdriver and the manual override will return.

#### ■ Locking slotted type

If the manual override is turned by 180° clockwise and the ► mark is adjusted to 1, then pushed in the direction of an arrow (↓), it will be locked in the ON state. If the manual override is turned by 180° counterclockwise and ► mark is adjusted to 0, locking will be released and the manual override will return.

Push down completely on the manual override button with a small screwdriver. While down, turn clockwise 90° to lock it. Turn it counterclockwise to release it.

#### ■ Locking lever type (Option)

Push down completely on the manual override button with a small screwdriver. While down, turn clockwise 90° to lock it. Turn it counterclockwise to release it.

#### ■ Manual override for double (latching) type

In the case of a double (latching) type, a manual override is provided not only on the body side but to the pilot as a standard. (VQ0000: Pilot valve only). After manual operation, the main valve of the manual on the body side returns to the position before the manual operation, however, the pilot valve manual override maintains the change-over position.

- If the manual override is turned by 180° clockwise and the ► mark is adjusted to A, then pushed in the direction of an arrow (↓), it will be back to the reset condition. (passage P → A)
- If the manual override is turned by 180° counterclockwise and the ► mark is adjusted to B, then pushed in the direction of an arrow (↓), it will be back to the reset condition. (passage P → B) (It is in the reset state at the time of shipment.)

Self-holding of the main valve is impossible. (Returns to the main valve position before operation.)

Self-holding of the main valve possible.

# Plug Lead Unit: Flip Type Series VQ0000/1000/2000

## Replacement of Cylinder Port Fittings

### ⚠ Caution

The cylinder port fittings are a cassette for easy replacement. (Except VQ1000)

The fittings are blocked by a clip inserted from the top of the valve. Remove the clip with a screwdriver to remove fittings. For replacement, insert the fitting assembly until it strikes against the inside wall and then re-insert the clip to the specified position.

Applicable tubing O.D	Fitting assembly part no.	
	VQ1000	VQ2000
Applicable tubing $\phi 3.2$	VVQ1000-50A-C3	—
Applicable tubing $\phi 4$	VVQ1000-50A-C4	VVQ1000-51A-C4
Applicable tubing $\phi 6$	VVQ1000-50A-C6	VVQ1000-51A-C6
Applicable tubing $\phi 8$	—	VVQ1000-51A-C8

Purchasing order is available in units of 10 pieces.

### Caution

1. Protect O-rings from scratches and dust to prevent air leakage.
2. The tightening torque for inserting fittings to the M5 thread assembly should be 0.8 to 1.4 N·m

## Mounting/Removing from the DIN Rail

### ⚠ Caution

#### <Procedure>

#### How to Remove

1. Loosen the clamp screw on side (a) of the end plate on both sides.
2. Lift side (a) of the manifold base and slide the end plate in the direction of (2) shown in the figure to remove.

#### Mounting

1. Hook side (b) of the manifold base on the DIN rail.
2. Press down side (a) and mount the end plate on the DIN rail. Tighten the clamp screw on side (a) of the end plate. The proper tightening torque for screws is 0.4 to 0.6 N·m.

## How to Calculate the Flow Rate

For obtaining the flow rate, refer to pages 2-1-8 to 2-1-11.

## Built-in Silencer Replacement Element

### ⚠ Caution

A silencer element is incorporated in the end plate on both sides of the manifold base. A dirty and choked element may reduce cylinder speed or cause malfunction. Clean or replace the dirty element.

#### Element Part No.

Type	Element part no.		
	VQ0000	VQ1000	VQ2000
Built-in silencer, direct exhaust (-S)	VVQ0000-82A-4	VVQ1000-82A-4	VVQ2000-82A-4

\* The minimum order quantity is 10 pcs.

Remove the cover from the side of the end plate and remove the old element with a screwdriver, etc.

## How to Use Plug Connector

### ⚠ Caution

#### Attaching and detaching connectors

To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.

To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

#### Crimping the lead wire and socket

Peel 3.2 to 3.7 mm of the tip of lead wire, enter the core wires and press contact it by a press tool. Be careful so that the cover of lead wire does not enter into the core pressing part.

#### Attaching and detaching lead wires with sockets

##### Attaching

Insert a socket in the square hole (Indicated as +, -) of connector, push in the lead wire and lock by hanging the hook of socket to the seat of connector. (Pushing-in can open the hook and lock it automatically.) Then confirm the lock by lightly pulling on the lead wire.

##### Detaching

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

## Special Wiring Specifications

In the internal wiring of F kit, P kit, T kit and S kit, double wiring (connected to SOL. A and SOL. B) is adopted for each station regardless of the valve and option types.

Mixed single and double wiring is available as an option.

### 1. How to order valves

Indicate an option symbol, -K, for the manifold no. and be sure to specify the mounting position and number of stations of the single and double wiring by means of the manifold specification sheet.

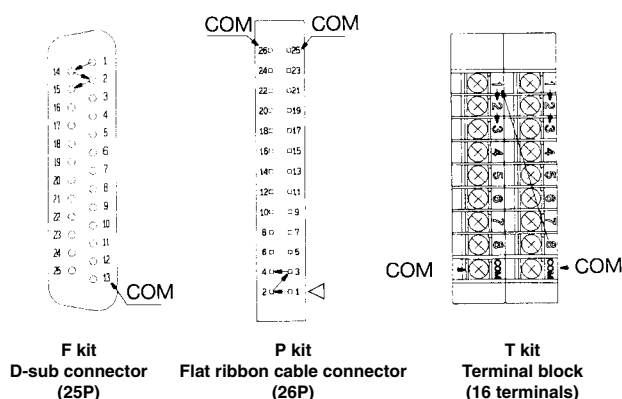

Example)

**VV5Q14-09FS0-D K S**

Others, option symbols:  
to be indicated alphabetically.

### 2. Wiring specifications

Connector terminal numbers are connected from solenoid station 1 on the A side in the order indicated by the arrows without skipping any terminal numbers.

### 3. Max. number of stations

The maximum number of stations depends upon the number of solenoids. Assuming one for a single and two for a double, determine the number of stations so that the total number is not more than the maximum number given in the following table.

kit	F kit (D-sub connector)		P kit (Flat ribbon cable connector)				T kit (Terminal block)		S kit (Serial)
Type	F□□ 25P	F□A 15P	P□□ 26P	P□C 20P	P□B 16P	P□A 10P	T1	T2	S□
Max. points	Note) 16	14	Note) 16	Note) 16	14	8	8	16	16

Note) Due to the limitation of internal wiring.

## Negative Common Specifications

Specify the valve model no. as shown below for negative COM specification. The standard manifold no. can be used. Please contact SMC for negative COM S kit.

### How to order negative COM valves

**VQ1140 N-5LO-C6**

• Negative common specifications

## Inch-size One-touch Fittings

Refer to following model no. for inch-size One-touch fittings.

### How to order manifold

**VV5Q14-08FSO-DN-00T**

P, R port size

VQ0000	ø1/4"
VQ1000	ø1/4"
VQ2000	ø5/16"

### How to order valves

**VQ1140-5M-N7**

Cylinder port

Symbol	N1	N3	N7	N9
Applicable tubing O.D. (Inch)	ø1/8"	ø5/32"	ø1/4"	ø5/16"
A, B port	VQ0000	○	○	—
	VQ1000	—	○	—
	VQ2000	—	○	○

## Plug Connector Assembly Model

Connector assembly will be required when the F, P, T, S kits add a valve.

Specify the type of valve and connector assembly.

### Connector Assembly Part No.

Specifications		Part no.
Single (2-wire)	Positive common	AXT661-14A-F
	Negative common	AXT661-14AN-F
Double (latching) (3-wire)	Positive common	AXT661-13A-F
	Negative common	AXT661-13AN-F

Note) Lead wire length: 300 mm

Note) The parts numbers above are applicable to VQ0000/1000 (2 to 16 stations) and VQ2000 (2 to 10 stations). VQ2000 (11 to 16 stations) uses AXT661-13A(N)-F425.

Series **VQ0000/1000/2000**

## Option

**DIN Rail Mounting**

Each manifold can be mounted on a DIN rail.

Order it by indicating an option symbol for DIN rail mounting style, -D. In this case, a DIN rail which is approx. 30 mm longer than the manifold with the specified number of stations is attached. Besides, it is also available in the following cases.

● **When DIN rail is unnecessary (C kit only.)**

(DIN rail mounting brackets only are attached.)

Indicate the option symbol, -DO, for the manifold no.

Example)

**VV5Q14-08C-DOS**

Others, option symbols:  
to be indicated alphabetically.

● **When using DIN rail longer than the manifold with specified number of stations**

Clearly indicate the necessary number of stations next to the option symbol, -D, for the manifold no.

Example)

**VV5Q14-08FS1-D09S**

DIN rail for 9 stations

Others, option symbols:  
to be indicated alphabetically.

● **When changing the manifold style into a DIN rail mount**

Order brackets for mounting a DIN rail. (Refer to "Option" on pages 2-4-60, 61 and 64.)

No. VQ0000-57A4 (For VQ0000)

VQ1000-57A-4 (For VQ1000)

VQ2000-57A-4 (For VQ2000)

2 pcs. per one set

● **When ordering DIN rail only**

**DIN rail no.: AXT100-DR-n**

\* Refer to the DIN rail dimension table for determining the length.

**L Dimension**

$$L = 12.5 \times n + 10.5$$

No.	1	2	3	4	5	6	7	8	9	10
L dimension	23	35.5	48	60.5	73	85.5	98	110.5	123	135.5

# Series VQ

## VQ0000 (VV5Q04)/Plug Lead Unit, Flip Type

(F, P, T, S kit)

\* For how to increase the stations, refer to the instruction manual.

	Housing assembly and SI unit <sup>(3)</sup>	U side end plate assembly	Valve	D side end plate assembly	Station increase parts
S kit					
P kit	 PS (Side entry)				
F kit	 FS (Side entry)				
T kit					

- 

Note 1) S kit is composed of a flat ribbon cable housing assembly (AXT100-2-PU20) of ① SI unit and ② P kit (20 pins).
- 

Note 2) Since no connector assembly is included, order it separately. (Refer to page 2-4-69.)
- Note 3) A housing assembly is not used for a C kit.
- Note 4) A DIN rail clamping bracket is attached to each.

## <Housing Assembly and SI Unit>

### Housing assembly and SI unit no.

No.	Manifold	Part no.	Description
① <sup>(1)</sup>	(SA kit)	EX330-S001	General type SI unit (Series EX300)
	(SB kit)	EX130-SMB1	SI unit for MELSECNET/MINI-S3 Data Link System (Mitsubishi Electric Corporation)
	(SC kit)	EX130-STA1	SI unit for SYSBUS Wire System (OMRON Corporation)
	(SD kit)	EX130-SSH1	SI unit for Satellite I/O Link System (SHARP Corporation)
	SF1 kit	EX130-SUW1	SI unit for 16 point Uni-wire System (NKE Corporation)
	SH kit	EX130-SUH1	SI unit for 16 point Uni-wire H System (NKE Corporation)
②	P <sub>S</sub> <sup>U</sup> kit	AXT100-2-P <sub>S</sub> <sup>U</sup> □ <sup>(2)</sup>	Flat ribbon cable housing assembly □ = Number of pins: 26, 20, 16, 10
③	F <sub>S</sub> <sup>U</sup> kit	AXT100-2-F <sub>S</sub> <sup>U</sup> □ <sup>(2)</sup>	D-sub connector housing assembly □ = Number of pins: 25, 15
④ <sup>(3)</sup>	T kit	AXT100-2-TB1	Terminal block assembly (8 terminals)
⑤ <sup>(3)</sup>	T kit	AXT100-2-TB2	Terminal block assembly (8 terminals)

Note 1) S kit is composed of a flat ribbon cable housing assembly (AXT100-2-PS20) of ① SI unit and ② P kit (20 pins). Place an order for AXT100-2-PS20 separately.

Note 2) Top/vertical entry connector for FU and PU while side (horizontal) entry connector for FS and PS.

Note 3) In the case of standard specifications and double wiring, ④ is for 1 to 4 stations and ⑤ is for 5 to 8 stations.

Since no connector assembly is included, order it separately. (Refer to page 2-4-69.)
