

Air Cylinder

ø125, ø140, ø160, ø180, ø200, ø250, ø320

RoHS

Lightweight

Weight: Max. **65%** reduction

39.1 kg → **13.4 kg**

(Compared with a ø180, 100 mm stroke CS1 (steel tube) series model)

High Rigidity

■ Allowable lateral load equal to the CS1 (steel tube) series

Allowable lateral load: Max. **900 N**

(ø320, 100 mm stroke, with piston rod extended)

■ When using a rotating bracket:

Max. stroke increased by **1.6 times**

410 mm stroke → **650 mm** stroke

Maximum allowable stroke when using a clevis bracket

Improved Ease of Piping

Centralized piping ports in the axial direction increase piping flexibility.

(Axial centralized piping type)

Rod side axial piping

Head side axial piping

CS2 Series

New

- Bore size ø320 has been added to the standard type (single rod and double rod).
- A long stroke type (ø180 to ø320) has been added.

SMC

CAT.ES20-196D

Lightweight

Weight reduced by a change in the cover material

* Compared at a 100 mm stroke

Bore size [mm]	CS2 (Aluminum tube) [kg]	CS1 (Steel tube) [kg]	Reduction rate [%]
125	7.0	17.9	61
140	8.2	21.4	62
160	11.3	28.8	61
180	13.4	39.1	65
200	17.8	48.4	63
250	30.8	88.9	65
 320	56.4	128.1 (CS1 ø300)	65

Ease of piping improved by placing the piping and cushion valve on the same side

Mounting is interchangeable with the CS1 series.

- Interchangeable cylinder mounting dimensions
- Interchangeable rod end thread sizes

■ Lateral load equal to the CS1 series

High Rigidity

Allowable lateral load: Max. 900 N

($\phi 320$, 100 mm stroke, with piston rod extended)

■ When using a rotating bracket:

Max. stroke increased by 1.6 times

410 mm stroke $\rightarrow$ **650 mm** stroke

Lighter cylinder reduces self-weight deflection

Stroke range extended to widen use

Maximum allowable stroke when using a clevis bracket

Air cushion

Bumper cushion

Combined structure

- The bumper cushion reduces the metal noise that occurs when the piston stops at the end of the stroke. ($\phi 180$, $\phi 200$, $\phi 250$, and $\phi 320$ only)

Auto switches can be mounted on $\phi 125$ to $\phi 320$.

- Solid state auto switch: D-M9□
- Reed auto switch: D-A9□
- Magnetic field-resistant auto switch: D-P3DWA ($\phi 125$ to $\phi 200$ only)

Smooth Cylinder

CS2Y Series

($\phi 125$ to $\phi 160$ only)

- Min. operating pressure: 0.005 MPa
- For stable operation even at low speeds of 5 mm/s

For details, refer to the **Web Catalog**.

Axial Centralized Piping (ø180, ø200, and ø250 only)

Increased piping flexibility, Reduced piping labor

- Piping ports are located in the axial direction of the head cover or the rod cover.
- For long-stroke operation, the speed can be adjusted on one side. Furthermore, the piping has been simplified, resulting in improved ease of piping.

* For bore sizes ø180 to ø320, cylinders whose strokes exceed the lengths shown in the table to the right are categorized as class 2 pressure vessels under the Class 2 Pressure Vessel Act. Only the long stroke specification (page 40) is selectable for class 2 pressure vessels to be used or installed in Japan. For laws and regulations, refer to the CS1 series ([Web Catalog](#)).

* A bore size ø320 class 2 pressure vessel is available as a special product.

* For bore size ø180, the 1201 to 1569 stroke range for mounting bracket types other than the foot bracket and rod flange is only selectable with the individual made-to-order specification -X1034. As this specification exceeds the stroke limit, be sure to check the operating conditions, such as buckling of the piston rod, before deciding to use the product.

Relationship between Cylinder Size and Maximum Stroke

The below table shows the applicable maximum stroke (in cm units), found by calculation assuming the case where the force generated by the cylinder itself acts as buckling force on the piston rod, or piston rod and cylinder tube.

Therefore, it is possible to find the applicable maximum stroke for each cylinder size using the relationship between the size of the operating pressure and the cylinder support type, regardless of the load ratio.

[Reference] If it is stopped with the external stopper on the cylinder extension side, even with a light load, the maximum generated force of the cylinder will act on the cylinder itself.

* The seal kit includes a grease pack (40 g). Order with one of the following part numbers when only the grease pack is required.

Grease pack part number: GR-S-010 (10 g), **GR-S-020** (20 g)

* Refer to page 11 for bore size ø320 replacement parts/seal kit.

* Do not remove the rod seal of bore sizes ø180 to ø250 because it is a non-replaceable part.

* Refer to page 76 for precautions when replacing the seal.

* Please contact SMC to order the common made-to-order specification -XA□ (Change of rod end shape), in which the rod seal of bore sizes ø180 to ø250 can be replaced.

* Trunnion type should not be disassembled. (Refer to page 76.)

Grease pack part number: GR-S-010 (10 g), GR-S-020 (20 g)

* Refer to page 31 for bore size ø320 replacement parts/seal kit.

* Do not remove the rod seal of bore sizes ø180 to ø250 because it is a non-replaceable part.

* Refer to page 76 for precautions when replacing the seal.

* Please contact SMC to order the common made-to-order specification -XA□ (Change of rod end shape), in which the seal of bore sizes ø180 to ø250 can be replaced.

* Trunnion type should not be disassembled. (Refer to page 76.)

Maximum Strokes

* When using with auto switches, refer to the "Minimum Stroke for Auto Switch Mounting" table on page 62.

			[mm]
Bore size	Mounting bracket	Stroke range ①	Stroke range ②
180	—	—	1570 to 2500
200	—	999 to 1200	1201 to 2500
250	—	814 to 1200	1201 to 2400
320	—	496 to 1200	1201 to 2400

* The CS2-V series cylinders are categorized as class 2 pressure vessels under the Class 2 Pressure Vessel Act when the products are to be used or installed in Japan.

For laws and regulations, refer to the CS1 series (**Web Catalog**).

* A bore size ø320 class 2 pressure vessel is available as a special product.

* Stroke range ② is only selectable with the individual made-to-order specification -X1034. As this specification exceeds the stroke limit, be sure to check the operating conditions, such as buckling of the piston rod, before deciding to use the product.

[Stainless Steel Mounting Screw]

The following stainless steel mounting screw kit (including set screws) is available. Use it in accordance with the operating environment. (Since the auto switch mounting bracket is not included, order it separately.)

BBA1: For D-A5/A6/F5/J5 types

The above stainless steel screws are used when a cylinder is shipped with the D-F5BA auto switch. When only one auto switch is shipped independently, the BBA1 is attached.

* When using the D-M9□A/M9□AV or Y7BA, do not use the steel set screws which are included with the auto switch mounting brackets on the left (BS5-□□□, BS4-□□□).

Order a stainless steel screw kit (BBA1) separately, and use the M4 x 8 L stainless steel set screws included in the BBA1.

* Refer to the **Web Catalog** for details on the BBA1.

* The figure shows the mounting example for the D-A9□(V)/M9□(V)/M9□W(V)/M9□A(V)

Other than the applicable auto switches listed in “How to Order,” the following auto switches are also mountable. Refer to the **Web Catalog** for the detailed specifications.

Auto Switch Connections and Examples

Sink Input Specifications

3-wire, NPN

2-wire

Source Input Specifications

3-wire, PNP

2-wire

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

Examples of AND (Series) and OR (Parallel) Connections

* When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid. Depending on the operating environment, the product may not operate properly.

3-wire AND connection for NPN output (Using relays)

(Performed with auto switches only)

3-wire OR connection for NPN output

3-wire AND connection for PNP output (Using relays)

(Performed with auto switches only)

3-wire OR connection for PNP output

2-wire AND connection

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with a load voltage less than 20 V cannot be used. Please contact SMC if using AND connection for a heat-resistant solid state auto switch or a trimmer switch.

Example) Load voltage at ON
Power supply voltage: 24 VDC
Internal voltage drop: 4 V
Load voltage at ON = Power supply voltage –
Internal voltage drop x 2 pcs.
= 24 V – 4 V x 2 pcs.
= 16 V

2-wire OR connection

Example) Load voltage at OFF
Leakage current: 1 mA
Load impedance: 3 kΩ
Load voltage at OFF = Leakage current x 2 pcs. x
Load impedance
= 1 mA x 2 pcs. x 3 kΩ
= 6 V

(Solid state)
When two auto switches are connected in parallel, malfunction may occur because the load voltage will increase when in the OFF state.

(Reed)
Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <https://www.smcworld.com>

Handling

Warning

1. Do not use the cylinder as a shock absorber.

Using the cylinder as a shock absorber may cause damage.

2. Do not open the cushion valve too far. Be sure to stay within the allowable number of rotations when opening.

Although a retaining ring is installed or caulked as a retaining mechanism for the cushion valve, do not open the cushion valve too far. Be sure to stay within the allowable number of rotations when opening.

If air is supplied and operation started without confirming the above condition, the cushion valve may be ejected from the cover.

The allowable number of rotations refers to the number of rotations until the restrictor of the cushion valve is completely opened from a completely closed state.

To adjust the cushion valve, use a JIS B 4648 hexagon wrench key 4 (width across flats of cushion valve: 4).

Allowable Number of Rotations

Bore size [mm]	Allowable number of rotations
125, 140, 160	5
180, 200, 250, 320	6

3. Be certain to activate the air cushion at the stroke end.

Mounting

Caution

1. Regarding the installation of a knuckle joint

Please contact SMC if a knuckle joint must be installed on the piston rod by using the rod end nut.

2. Regarding the screw-in of fittings when piping

When ports and fittings are screwed in, tighten them with the proper tightening torque below.

Bore size [mm]	Connecting thread nominal size	Proper tightening torque [N·m]
125, 140	1/2	28 to 30
160	3/4	
180, 200	1/2	
250, 320	3/4	

3. Do not place tape or other objects onto the painted surface of the mounting bracket.

The paint of the mounting bracket is dried naturally, so it may peel off if tape or another object is placed onto it.

Disassembly / Assembly

Caution

1. Do not damage the cushion rings during removal or assembly.

If a cushion ring bumps against something during removal or assembly, the air cushion may not function properly due to cushion ring deformation.

2. Seal replacement

For cylinders for which the rod seal cannot be replaced, note that reassembly will not be possible if the rod cover is pulled out of the piston rod when the cylinder is disassembled for seal replacement.

3. The trunnion type cylinder requires accuracy in assembly.

The trunnion type cylinder may lose dimensional accuracy and malfunction when it is disassembled and reassembled because the axial center of the trunnion and that of the cylinder will not be aligned easily.

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

 **Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

 **Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

 **Danger:** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

*1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Revision History

Edition B * The double rod type and smooth cylinder have been added to the CS2 series.
* 9 types of made-to-order specifications have been added. NZ

Edition C * Bore sizes $\phi 180$, $\phi 200$, and $\phi 250$ have been added to the single rod and double rod types.
* The axial centralized piping type ($\phi 180$, $\phi 200$, and $\phi 250$) has been added.
* The number of pages has been increased from 32 to 52. ZZ

Edition D * Bore size $\phi 320$ has been added to the standard type (single rod and double rod).
* A long stroke type ($\phi 180$ to $\phi 320$) has been added.
* The number of pages has been increased from 52 to 80. AU

 **Safety Instructions** Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
