

Stopper Cylinder

ø16, ø20, ø32, ø40, ø50

New

RoHS

Additional variations now include the option to have a female rod end on the “**round bar type**” and the “**chamfered type**”.

8 types → 10 types

The new body allows for auto switch mounting on 4 faces.

Mounting brackets are not required. Compact auto switches are mountable.

Solid state auto switch
D-M9□

Reed auto switch
D-A9□

Magnetic field-resistant auto switch
D-P3DWA

RSQ Series

Model Selection

Operating Range

Example 1 Transfer speed: 15 m/min
Weight of transferred object: 30 kg
Rod end configuration: Roller

<Selection method>

Find the intersection of the transfer speed of 15 m/min on the horizontal axis and the weight of the transferred object of 30 kg on the vertical axis in graph [1], and select the **RSQ□40-□□RZ** that falls in the cylinder operating range.

Graph [1]
Round Bar/Chamfered/Roller

Example 2 Transfer speed: 15 m/min
Weight of transferred object: 60 kg
Friction coefficient $\mu = 0.1$
Rod end configuration: Lever

<Selection method>

Find the intersection of the transfer speed of 15 m/min on the horizontal axis and the weight of the transferred object of 60 kg on the vertical axis in graph [2], and select the **RSQ□40-□□LZ** that falls in the cylinder operating range.

Graph [2]
Lever

- * Graph [2] shows the case of a Lever Type with a friction coefficient $\mu = 0.1$ and at room temperature (20 to 25°C).
- * When selecting cylinders, confirm the Specific Product Precautions as well.

Lateral Load and Operating Pressure

The larger the lateral load, the higher the operating pressure required for the stopper cylinder. Set the operating pressure using the graphs shown on the right as a guide. (Applicable to round bar, chamfered, roller type rod end configurations.)

Stopper Cylinder Fixed Mounting Height *RSQ Series* ø16, ø20, ø32, ø40, ø50

* Auto switch mounting bracket and auto switch are enclosed with the cylinder for shipment.
 For an environment that needs the water-resistant auto switch, select the D-M9□A(V) type.
 Auto switch mounting bracket for the D-F7BA(V) model uses BQ4-012 and BQ5-032 normal specifications (metal screw).

Auto Switch Mounting Brackets/Part Nos.

[Stainless Steel Mounting Screw]

The following stainless steel mounting screw kit (including nuts) is available. Use it in accordance with the operating environment. (Please order BQ-2 separately, since auto switch spacers (for BQ-2) are not included.)

BBA2: For D-A7/A8/F7/J7 models

The stainless steel screws above are used when a cylinder is shipped with the D-F7BA/F7BAV auto switches. When only one auto switch is shipped independently, the BBA2 is attached.

- * When mounting D-M9□A(V) on a port other than the ports for ø32, ø40, and ø50, order auto switch mounting brackets BQ2-012S, BQ-2, and stainless steel screw set BBA2 separately.
- * Refer to the **Web Catalog** or Best Pneumatics Catalog for details on the BBA2.

Auto Switch Mounting Bracket Weight

Auto switch mounting bracket part no.	Weight [g]
BQ-1	1.5
BQ-2	1.5
BQ2-012	5

Other than the applicable auto switches listed in "How to Order," the following auto switches are also mountable.

Other Applicable Auto Switches/Refer to the **Web Catalog** or Best Pneumatics Catalog for further information on auto switches.

Type	Model	Electrical entry	Features
Reed	D-A73	Grommet (Perpendicular)	—
	D-A80		Without indicator light
	D-A73H, A76H	Grommet (In-line)	—
	D-A80H		Without indicator light
Solid state	D-F7NV, F7PV, F7BV	Grommet (Perpendicular)	—
	D-F7NWV, F7BWV		Diagnostic indication (2-color indicator)
	D-F7BAV		Water-resistant (2-color indicator)
	D-F79, F7P, J79	Grommet (In-line)	—
	D-F79W, F7PW, J79W		Diagnostic indication (2-color indicator)
	D-F7BA		Water-resistant (2-color indicator)
	D-F7NT		With timer

- * With pre-wired connector is also available for solid state auto switches.
For details, refer to the **Web Catalog** or Best Pneumatics Catalog.
- * Normally closed (NC = b contact) solid state auto switches (D-F9G/F9H) are also available.
For details, refer to the **Web Catalog** or Best Pneumatics Catalog.

Prior to Use

Auto Switch Connections and Examples

Sink Input Specifications

3-wire, NPN

2-wire

Source Input Specifications

3-wire, PNP

2-wire

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

Examples of AND (Series) and OR (Parallel) Connections

* When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid.

3-wire AND connection for NPN output (Using relays)

(Performed with auto switches only)

3-wire OR connection for NPN output

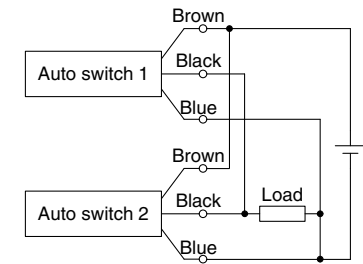

3-wire AND connection for PNP output (Using relays)

(Performed with auto switches only)

3-wire OR connection for PNP output

2-wire AND connection

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with a load voltage less than 20 V cannot be used.

$$\begin{aligned}\text{Load voltage at ON} &= \text{Power supply voltage} - \\ &\quad \text{Residual voltage} \times 2 \text{ pcs.} \\ &= 24 \text{ V} - 4 \text{ V} \times 2 \text{ pcs.} \\ &= 16 \text{ V}\end{aligned}$$

Example: Power supply is 24 VDC
Internal voltage drop in auto switch is 4 V.

2-wire OR connection

(Solid state)
When two auto switches are connected in parallel, malfunction may occur because the load voltage will increase when in the OFF state.

(Reed)
Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

$$\begin{aligned}\text{Load voltage at OFF} &= \text{Leakage current} \times 2 \text{ pcs.} \times \\ &\quad \text{Load impedance} \\ &= 1 \text{ mA} \times 2 \text{ pcs.} \times 3 \text{ k}\Omega \\ &= 6 \text{ V}\end{aligned}$$

Example: Load impedance is 3 k Ω .
Leakage current from auto switch is 1 mA.

RSQ Series Simple Specials

The following changes are dealt with through the Simple Specials System.

Please contact your local sales representative for more details.

1 Change of Rod End Shape

Symbol

-XA1 to XA38

Model	Action	Symbol for change of rod end shape
RSQ-Z	Double acting	For round bar ø16
	Double acting with spring loaded	XA1, 3, 6, 7, 11, 13, 17, 18, 19, 32, 34 ø20 to ø50
	Single acting	For chamfered XA35, 36, 37, 38

Precautions

- SMC will make appropriate arrangements if no dimension, tolerance, or finish instructions are given in the diagram.
- Standard dimensions marked with "*" will be D - 2 mm to the rod diameter (D). Enter any special dimension you require.
- The following diagram shows piston rod at spring extend.

Table 1

• For chamfered type (XA35 to XA38), make the H dimension to be equal to or less than the values on Table 1. (For the case with larger dimension than Table 1, it will be made-to-order separately.)

Bore size [mm]	H [mm]
ø16	40
ø20, ø32	63
ø40, ø50	83

For the lengthwise dimension, enter the amount that you wish to add to the standard dimension.
(If the length is the same for the standard type, * in the figure on the left becomes 0.)

------------------------	------------------------	------------------------	------------------------

Made to Order Common Specifications

Please contact SMC for detailed dimensions, specifications, and lead times.

Symbol

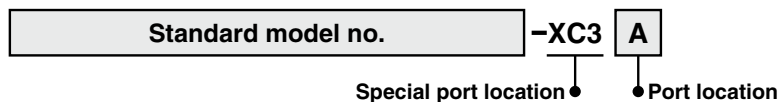

-XC3

1 Special Port Location

Compared with the standard models, a cylinder which changes the connecting port location and the rod-chamfered location.

Model	Action	Note
RSQ-Z	Double acting	
	Double acting with spring loaded	
	Single acting	

How to Order

Specifications: Same as standard

Relationship between the Port Location and Rod-chamfered Location

Corresponding symbol of mounting bracket (Positional relationships)				
<p>Standard</p>	<p>-XC3A</p>	<p>-XC3B</p>	<p>-XC3C</p>	
<p>In the case of standard models, the symbol for port and rod-chamfered positions are on the same surface and positioned upward. Define the port location at right to be A, and then B, C in a clockwise order.</p>				

RSQ Series

Specific Product Precautions 1

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <http://www.smcworld.com>

Selection

⚠ Danger

1. Use within the range of specifications.

If using beyond the specifications, excessive impacts or vibrations could be applied to the stopper cylinder and might cause breakage.

⚠ Caution

1. Do not allow a pallet to collide with the cylinder when the lever is upright.

For the lever type model with a built-in shock absorber, if the next pallet runs into the lever when it is in the upright position (after the shock absorber has assimilated energy), the cylinder body will receive the full energy of the impact, and this should not be permitted.

2. Do not apply pressure from the head end of a single acting type cylinder.

If air is supplied from the head end of a single acting cylinder, blow-by of the air will occur.

3. Do not scratch or gouge the sliding portion of a piston.

Quenching of the piston rod has not been performed. If there is a danger of scratching or nicking the piston rod due to sharp edges, etc. on the contact area of a pallet, the pallet should not be used, as this can cause a malfunction.

4. When using a stopper cylinder for intermediate stopping of a load connected directly to a cylinder, etc.

The operating ranges shown in this catalog apply only for stopping of a pallet on a conveyor. When using a stopper cylinder to stop a load connected directly to a cylinder, etc., the cylinder thrust will become a lateral load. In this case, refer to the operation manual and select a cylinder remaining within the allowable energy and allowable lateral load ranges.

5. For the lever type model with a built-in shock absorber (without a lock mechanism), the lever may be pushed back in the opposite direction to the transfer direction due to the return force of the shock absorber, if 10 N of thrust or more in the transfer direction is not applied to the lever after the pallet collides with the lever.

If the lever must be continuously upright, select a lever with a lock mechanism.

6. The operating range for the lever type model with a built-in shock absorber indicates the range in which the lever is not damaged due to the shock absorber's performance and cylinder rigidity. It is not the same as the range in which the lever can stop softly and fully.

Near the upper limit, collision may occur at the end. If a soft stop is required, sufficient clearance is necessary. Consult with SMC when a reliable soft stop is required near the upper limit.

Mounting

⚠ Caution

1. Do not apply rotational torque to the cylinder rod.

In order to prevent rotational torque from acting upon the cylinder rod, mount it so that the contacting surfaces of the pallet and cylinder are parallel to one another.

2. When the lever type model with a built-in shock absorber is installed from the direction of the lever side, mounting holes must be machined in accordance with recommend hole diameters in the table below.

When it is installed from the direction of the lever side of the stopper cylinder as shown in Fig. 1, note that the lever's outside diameter is larger than the rod cover boss diameter.

Mounting

⚠ Caution

Operation

⚠ Caution

1. For the lever type model with a lock mechanism, do not remove the grease applied to the pin B and the bracket.

When using the cylinder continuously with no grease applied, the lock and unlock may not operate correctly due to unusual wear of the pin B or rod cover.

Check the grease application state periodically and apply the grease when necessary. The grease to be applied is available as grease pack. When the grease pack is required, order it using the part number shown below.

Grease pack part number: GR-S-010 (10 g)

(* The grease to be applied is the same as that used for the cylinder.) Similarly, be careful not to remove the grease from the piston rod end of the built-in shock absorber. Check the grease application state periodically.

2. For the lever type model with a lock mechanism, do not apply any external force from the opposite side when the lever is locked. Doing so may cause the lock mechanism to break.

When moving pallets during conveyor adjustments, first lower the cylinder.

3. Do not use oil, etc. on the sliding parts of the piston rod.

This can cause trouble with retraction or other malfunctions.

4. Do not get your hands caught during cylinder operation.

Since the lever section moves up and down when the cylinder is in operation, take sufficient care to avoid getting your hands caught between the rod cover and the lever holder.

5. Do not expose the shock absorber to machining oil, water, or dust.

This can cause oil leakage and malfunction of the shock absorber.

RSQ Series

Specific Product Precautions 2

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For actuator and auto switch precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: <http://www.smcworld.com>

Maintenance

⚠ Caution

1. How to replace the shock absorber

- 1) Loosen the hexagon socket head set screw (M3) on the piston rod.

- 2) With the lever laid down as shown in the figure, pull out the shock absorber to remove it and replace this shock absorber with a new one.

- 3) Insert the hexagon socket head set screw into the piston rod, and then tighten it. After the hexagon socket head set screw has been in contact with the end, tighten it further 1/4 turn as a guideline. If the hexagon socket head set screw is tightened excessively, this may cause it to break or the shock absorber to malfunction. Tightening torque: 0.29 N·m
- 4) After replacement, apply grease to the piston rod end of the shock absorber.

2. How to change the piston rod orientation

For the roller, and lever type models, put the pallet in contact with the piston rod in the direction shown in the figure. (The piping port location has been made flush with the pallet contact surface at the factory shipment.)

⚠ Caution

How to change the piston rod orientation

- 1) Loosen two hexagon socket head set screws (M3) on the rod cover that secure the non-rotating guide.
- 2) Adjust the orientation of the piston rod to a desired position.
 - * Put the pallet contact surface in parallel to the cylinder contact surface so that the rotational torque does not apply to the piston rod.
- 3) Tighten two hexagon socket head set screws to secure the non-rotating guide. When tightening the hexagon socket head set screws, apply the thread locking agent. Tightening torque: 0.63 N·m

Note) The non-rotating guide is secured by two hexagon socket head set screws. If one hexagon socket head set screw is tightened excessively, the non-rotating guide may be in contact with the piston rod, causing a malfunction. Therefore, tighten the hexagon socket head set screws alternately and pay special attention so that the non-rotating guide is not in contact with the piston rod.

- 4) Make sure that the cylinder operates smoothly.

3. How to adjust the lever type (adjustable absorber type) model

For the lever type (adjustable absorber type) model, strokes of the shock absorber can be adjusted with an adjustment bolt included in order to stop in accordance with the transfer conditions. Follow the procedures below to adjust strokes.

Procedures

- 1) Loosen the set screw (M4) on the lever side.
 - 2) Adjust the adjustment bolt in accordance to the energy of the transferred object. (The stroke of the shock absorber becomes larger (absorbing energy becomes bigger) when tightening the adjustment bolt, while it becomes smaller when loosening the bolt.)
 - 3) After adjusting the adjustment bolt, fix the bolt with the set screw (M4) loosened in 1).
- Tightening torque M4: 1.5 N·m

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

 **Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

 **Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

 **Danger :** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

*1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines.
(Part 1: General requirements)
ISO 10218-1: Manipulating industrial robots – Safety.
etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Safety Instructions

Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
