Option

I/O Signal Wiring Example for Positioning Type

Motor

Series LEJ

Series LEY

Encoder

Series LEJ

Series LEY

I/O connector (Option): CN1

Connect the main circuit power supply and control circuit power supply (24 VDC) supplied to the driver.

Connect the control circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.

Connect the main circuit power supply (24 VDC) applied to the driver.

Connect the main circuit power supply (0 V side) of the control circuit power supply (24 VDC) applied to the drive.
