**EX500-S103 Series**  
SI Unit - Gateway Decentralised System 2  
(128 Points)

## Feature

- The SI Unit is compatible with the Gateway Decentralised System 2 (128 Points):
  - Protocol: PROFINET, EtherNet/IP
  - Number of inputs/outputs (**number** of inputs/outputs per branch): 128 inputs/128 outputs (32 inputs/32 outputs)
  - Number of valve manifold connections (**number** of connections per branch): max. 8 units (max. 2 units)
  - Number of **input unit** connections (**number** of connections per branch): max. 8 units (max. 2 units).

## Customer Benefit

- Possibility **of connecting** through common protocols and greater configuration flexibility by incrementing the number of units that can be installed.

Wiring example:

# Improved features and related benefits

## Feature

- Web server function: valve operation test (ON/OFF), connection diagnostic between valve manifold and **input unit**, and short-circuit diagnostic of input device can be performed on a **web** browser.

## Customer Benefit

- On-board diagnostics and data setting **thereby** improving control of the application.

## Feature

- The SI Unit has a built-in setting switch which switches the number of outputs (32 points / 16 points) of the valve manifold connected to the SI Unit. By setting the number of outputs to 16 points, two valve manifolds can be installed to one branch port.

## Customer Benefit

- Part number simplification and reduction of stock, while increasing the configuration capabilities.

## Feature

- Applicable valve series: SY3000/5000/7000, VQC1000/2000/4000/5000, S0700, SV1000/2000/3000 (tie-rod base).

## Customer Benefit

- Great valve combination to adapt the needs of each application.
